The next Factory Act to be passed into law as Act XII of 1911. This Act extended the was Act XII of 1911 This Act extended the definition of "factory" so as to include seasonal factories working for less than 4 months in the year, shortened the hours within which children, and, as a general rule, women might be employed and further restricted the employment of women by night by allowing it only in the case of cotton ginning and pr ssing factories It also contained a number of new provisions for securing the health and satety of the operatives, making inspection more effective and securing generally the better administration of the Act The most important feature of the Act, however, was the introduction of a number of special provisions applicable only to textile factories The report of the Factory Commission showed that excessive hours were not worked except in textile factories The Act, for the first time, applied a statutory restriction to the hours of employment of adult males by laving down that, subject to certain exceptions, "no person shall be employed in any textile factory for more than 12 hours in any one day" It also provided in the case of textile factories that no child may be employed for more than six hours in any one day and that (subject to certain exceptions, which were factories worked in accordance with an approved system of shifts) no women may be employed before 5-30 a m or after 7 p m (the new limits had down generally for the employment of women and children)

The ratification by India of the Conventions adopted by the International Labour Conference held in Washington in 1919 necessitated radical revision of the Indian Factories Act of 1911 This was undertaken during 1921 and the Indian Factorics Amendment Act, 1922, introduced a series of important reforms including the adoption of a CC-hours' week, the raising of the minimum age of children from 9 to 12, the prohibition of night work for women, the extension of the Act to a large number of small factories, drastic restriction of the exempting provisions, etc. The principal object of the amending Act of 1923 was the

The conditions of factory labour until 1913 | nection with the law relating to the weekly The Factories Amendment Act of 1926 holiday was passed in order (1) to widen the definition of "factories" so as to bring within the control of the Act such establishments as Electrical Generating Stations, water works, etc. (2) to prevent the issue of age certificates by Certifying Surgeons to children who are not fit if for employment, (3) to make provisior for the prevention of cleaning machinery in motion, even by men, in cases where Local Governments were of opinion that the work is attended by danger to the operatives, (4) to provide a clearer definition of the periods prescribed for intervals of rest, and, (5) while still preventing the employment of children in two factories on the same day, the permitting of women to work in two factories on the same day provided that the limits for hours of work were not exceeded.

The Indian Factories Act, 1911, as amended by the Acts of 1922, 1923 and 1925, pres-cribed a daily as well as a weekly limit to the hours of work in factories and provided for rest intervals and for a weekly holiday Section 28 of the Act provided that no person should be employed in any factory for more than 11 hours in any one day, and Section 27 that no person should be employed in a factory for more than 60 hours in any one week Section 21 of the Act made it obligatory for the occupier of a factory to provide for each person employed a rest period of at least one hour at intervals not exceeding 6 hours, or at the request of the employees concerned two rest periods of half an hour each, at intervals not exceeding 5 hours, the total duration of the periods of rest on that day not being less than one hour for each period of 6 hours worked generally. With the previous sanction of the Local Government and at the request of the employees concerned the rest interval could be reduced to half an hour for each male person provided that he was not employed for more than 81 hours on each working day and was not required to work for more than five hours continuously For children, Section 23 (c) provided that no child should be employed in a factory for more than 6 hours in any one day Section 21 (b) provided that for each child work ing more than 5½ hours in any one day a period of rest of not less than half an hour shold be given and the period of rest was to be so fixed that no child should be required to work continuously for more than 4 hours Sections 23 (b) and 24 (a) further provided that no child or woman may be employed in any factory before half past five o'clock in the morning or riter 7 o'clock in the Under Section 25 a child could not be employed in two factories on the same day but adults could be so employed in such circumstan-Under the provisions ces as might be prescribed of Section 26 every Manager of a factory had to fix specified hours for the employment of each person employed in such factory and no person was allowed to be employed except during such specified hours The Governments of Madras Bombay, the United Provinces, the Punjab and the Central Provinces were the only Local Governments which had prescribed the circumstances under which adults might be employed in more removal of a difficulty which had arisen in con- than one factory on the same day. The rules

framed by these Local Governments myested the egroundants, or the manufacture of ground-Inspector of Lactories with the power to sanction inut oil, or the manufacture of ground-Inspector of Lactories with the power to sanction inut oil, or the manufacture of coffee, indigo, lac, such employment if he were satisfied that the lubber, sugar (including gur) or ten is to be a adults concerned were not employed for more seasonal factory, provided that the Local than 10 hours on any one day and that they covernment may, by notification in the local feecined the weekly holiday prescribed by official Gazette, declare any such factory in section 22 of the Act. In addition to the notice, which manufacturing processes are ordinarily the hours of work for particular periods, every carried on for more than 180 working days factory as required to maintain a register of all in the year not to be a sessonal factory for fictors was required to mintain a register of all in the year, not to be a seasonal factory for persons employed in a factory in the form presented by the Local Government showing their may also, by notification, declare any seasonal

commission made several very recommendations for substantial amenda-ments of the Indian Lactories Act, 1911, as unended by the Amending Acts of 1922, 1925, 1926 and 1931, firstly, for the reduction of the maximum limits of dails and weekly hours of work in perennial factories and for the latter regulation of such hours, secondly for the improvement of working conditions in intorics and thirdly, for a more effective observance on the part of the factory owners of the requirements of the Act. The Government of India, in the Department of Industries and Labour issued a circular letter, dated the 10th June 1932, addressed to all Local Governments and Administrations forwarding a draft Bill intended to consolidate the present law regarding the regulation of power using factories and incorporating the majority of the Com-missioners' recommendations All Provincial Covernments were asked to submit replies to this letter by the 1st December 1932 On accept of the I ocal Government's replies, the Honourable Member in charge of the Department of Industries and Labour of the Government of India made a tour of the more important industrial centres in India to discuss various questions arising out of the draft Bill with the representatives of Local Governments and associations of employers and workmen On the conclusion of this tour, the Government of India convened a conference of Provincial Chief Inspectors of Factories and a final Bill was then drawn up which was introduced in the Legislative Assembly on the 8th September 1933 It was present into Law at the Summer Session of the Legislitive Assembly at Sunla in 1934 and received the assent of the Governor-General on the 20th August of that year The new Act was brought into effect from 1st January 1935

The Royal Commission also made several suggestions with regard to the control or factorice not using power nearly all of which are at present unregulated The Government of India propose a new and separate Act in respect of such factories and they are at present engaged in drafting a Bill covering the Commissioners' recommendations in the matter

The following are the more important additional matters covered by the Consolidating Act -

between distinction drawn (a) Aseasonal and perennial factories A tactors which is exclusively engaged in cotton ginning, cotton or jute pressing, the decortication or cooling power of the air where he is of the

hours of work and the nature of their respective tractory in which manufacturing processes are employment and the nature of their respective tractory in which manufacturing processes are employment working days in the year and which cannot be Amendment of the Factories Act, follow curried on except during particular seasons or at mg the Recommendations of the Royal times dependent on the irregular action of Commission on Indian Labour—The Royal instituted forces, to be a seasonal factory for the umport ent' purposes or this Act

- (b) Factory operatives were formerly divided into two age groups (1) Adults and (2) Children, it persons over 12 and under 15 years of age. The Consolidating Act introduces a third age group of Adolescents" it, persons over the age of 15 years and under the age of seventeen years who have not been certified as fit for adult employment Such 'Adolescents" as have not been so certified are to be deemed to be children
- (c) The existing maximum limits of eleven hours per day and sixty hours per week continue to be permitted in the case of seasonal factories but the maximum hours of work permitted in the case of worker perennial factories has been to ten hours per day and 54 hours per week subject to the proviso that persons employed on work necessitating continuous production for technical reasons and persons whose work is required for the manufacture or supply of articles of prime necessity which must be made or supplied every day may be employed for not more than 56 hours in any one week maximum hours of work permitted in the case ot children is five hours per day both in seasonal and in perennial factories
- (d) The New Act introduces for the first time the principle of "spreadover," ie, the limitation of the period of the number of consecutive hours during which the daily limits of hours of work may be availed of by the owner or an occupier of a factory spread-over in the case of adults is limited to thirteen consecutive hours and in the case of children to seven and a half consecutive hours, but the continuous period of eleven free hours in every twenty-four hours in the case of adults must include the hours between 7 pm and 6 1 m in the case of women The continuous period of sixteen and a half free hours in the case of children must include the hours between 7 pm and 6 am Exemptions in the case of women are permitted in such cases as technical reasons require that work should be done at night, eg, in the fish curing industry.
- (c) The existing provisions with regard to the control of artificial humidification are expanded The Act also gives power to Local Governments to authorise an Inspector to call upon Managers of factories to carry out specific measures for increasing the

Employment of Children —B; the Amending Act of 1922 the maximum age of children was raised from 14 to 15 years and the minimum age from 9 to 12 The Act provides that no child shall be employed in any factors unless he is in possession of a certificate granted by a Certifying Surgeon showing that he is not less than 12 years of age and is fit for employment in a factory and while at work carries cither the certificate itself or a token giving reference to such-certificate Further, no child is allowed to be employed in any factory before six o'clock in the morning or after seven o'clock in the evening and no child is to be employed for more than five hours in any one day. The number of children employed in factories during the years 1922 to 1933 is shown in the following table -

Year	Total		
1922	67,658		
1923	74,620		
1924	72,531		
1925	68,725		
1926	60,094		
1927	57,562		
1928	50,911		
1929	46,843		
1930	37,972		
1931	26,932		
1932	21,7:3		
1933	19,091		

An examination of the figures in the above table will show that the number of children employed rose from 67,658 to 74,620 in 1923 This was due to the fact that the tea factories in Assam which employed about 11,000 children were brought within the scope of the Act for the first time in that year Further, the amendment of the Act in 1922 did not apply to children who were lawfully employed in a factory on or before the 1st July 1921 and it was not until 1924 that full effect was given to the new age restrictions for children.

There has been a steady decline in the number of children employed. In the textile mills in Bombay City there are none

Employment of Women - The number of women employed in factories during the years 1921 to 1929 increased steadily from 206,887 emploved in 1922 to 257,161 employed in 1929. But the number of women employed since 1929 has fallen perceptibly, the figures for 1930, 1931 and 1933 being 254,905, 231,183 and 216,837 respectively. The increase in the employ ment of women was due partly to the restrictions imposed on the employment of children and partly to the inclusion within the scope of the Act of all quasi-agricultural factories, for example, in the tea gardens which are dependent on female labour to a larger extent than other factories. An important change which the revision of 1922 made in connection with the employment of women was the repeal of Section 27 of the Act of 1911 which permitted the employment of women at night in ginning factories In view of this amendment the Government of India considered that they were in a position to ratify the Convention concerning the employment of women during the night adopted by the First International Labour Conference held at Washington in 1919 without undertaking any further legislation

#### LABOUR IN MINES.

contained provisions designed to secure safety in mines and it provided for the maintenance of an inspecting staff, but it contained no provisions effect from April 1930. regulating the employment of labour

Section 23 of the Indian Mines Act of 1923 limited weekly hours of miners to 54 underground and to 60 aboveground but no limits were prescribed for daily hours Assembly in March 1927 it was proposed to fix the maximum limit for daily hours at twelve fix the maximum limit for daily hours at twelve fix the maximum limit for daily hours at twelve fix the maximum limit for daily hours at twelve fix the majority of the Select Committee, and in addition suggested that weekly hours above ground should be limited to 54. In the meanwas also the opinion of a minority of the Select Committee appointed by the Assembly to consider the Bill. The majority of the Committee however adhered to the principle of a twelve-hour shift as proposed in the Bill but agreed that an eight-hour shift should be limited to 71 per day in

The conditions of employment of labour in gradually worked upto. They recommended to mines are governed by the provisions of the Government that after the new provisions Indian Mines Act, 1923, which came into force had been in operation for three years, the position with effect from the 1st July 1924 replacing the should be again reviewed as to whether an eightformer enactment of 1901. The Act of 1901 hour shift could be introduced. A daily limit of 12 hours was thus imposed by the Amending Act of 1928 and this was to be brought into

Recommendations of the Royal Commission The Royal Commission on Labour which reviewed the whole position came to conclusions In a Bill further similar to those reached by the Select Committee to amend the Act for certain purposes introduced A minority of the Commission advocated the by the Government of India in the Legislative reduction of the daily limit to eight hours while

The sex distribution of the persons employed in mines during the years 1926 to 1933 was as shown below .--

Year	Number	Number of males employed			Number of females employed		
	Underground	In open workings	On the surface	Underground	In open workings	On the surface	
1926	80,343	4J,306	51,967	31,889	27,833	18,775	
1927	86,766	50,028	53,903	31,850	27,697	19,046	
1928	86,155	51,005	52,430	31,785	28,453	17,848	
1929	92,856	51,235	51,954	24,089	28,728	17,839	
1930	101,649	50,396	52,709	18,684	21,186	17,043	
1031	98,885	38,833	45,157	16,841	16,079	14,987	
1032	96,196	30,256	39,899	14,711	10,761	12,835	
1938	99,556	30,866	40,616	12,799	10,721	11,949	

#### LABOUR ON RAILWAYS.

All railway workshops come under the ad-| the subject was introduced in the Legislative inistration of the Factories Act. The Indian Assembly in the autumn session of 1929 and was ministration of the Factories Act been made under the Hours of Employment drawn up during the following year Rules, 1930, framed under the Indian Railways Amendment Act, 1920.

The Conventions adopted by the International Labour Conference in 1919 and 1921 prescribed a 60-hour week and a weekly rest of not less than 24 consecutive hours for all workers hours provided under the Act of 1980 should be in British India employed in factories, in mines granted subject to the usual emergency excep-and in such branches of railway work as may be tions to all continuous workers is concerned this specified for this purpose by the competent has been accepted by the Government of India amended in 1922 to give effect to the Conven-as financial considerations permit tions limited the hours of work in factories to ment of India have also accepted the recommen-11 in any one day and to 60 in any one week dation made by the Commission that special Provisions were also made for intervals of rest efforts should be made to put into operation as and a weekly holiday Similar limitations were soon as possible the regulations devised to imposed under the Indian Mines Act of 1923 give effect to the Washington and Geneva in respect of colliery staff consolidated Factory Act of 1934 weekly hours railway employees. They have also accepted in perennial factories have been reduced to 14 the recommendation that the Railway Board and as will have been seen in the last chapter should reconsider the practicability of reducing Similar reductions are proposed in the case of the hours for intermittent workers and of giving Mines Both these apply to factories and mines controlled by The application of railway administrations the Conventions to other departments of railway administrations was found to be a problem extend the application of the Regulations to beset with many difficulties and has been a sub-the Rulways to which they have not yet been ject of prolonged investigations Orders were applied, and that, the question of reducing the issued by the Rulway Board in 1921 that the hours of work, generally, for 60-hour week should be adopted for station workers will be examined con staff not employed in connection with the working of trains The Indian Railway Conference Association drew up a set of rules in 1927 and these received the general approval not only of the Railway Board but also of the Boards of Directors of the lines managed by companies Subsequently, however, it was found that these working of overtime on Indian railways is rules while they aimed at applying the spirit of the more prevalent on construction than on the open Conventions did not adequately fulfil the statutory obligations imposed upon Government by a reas being confined to eight months in the monsoon, the ratification of the Conventions. The whole (2) special measures taken to speed up all heavy question was therefore again exhaustavely work to avoid the locking up of capital and reviewed and a Bill amending the Indian Bail-(3) wet foundation work in bridges which necessively act with the object of empowering the tate continuous work. #### UNEMPLOYMENT.

in India are quite different from the problems which have arisen in highly industrialised countries like England, the United States of America and Germany In the latter countries labouris divided into two fairly distinct classes (1) industrial, and (2) agricultural. During periods of depression in industry those workers who are thrown out of employment either on account of a temporary or a partial closing down of concerns cannot fall back upon agriculture for earning their livelihood. It is necessary to repeat here, in order to understand this question clearly, that more than 70 per cent of the population of India derive their livelihood from various occupations in connection with agricul-This does not mean that agriculture is a perennial source of employment. Considerable unemployment and distress occurs during periods when the monsoon falls. Even during those years when the monsoon is generally successful, there are usually parts of the country where the rainfall is deficient and there is not enough scope for the employment of all labour available Both the Government of India and the various Provincial Governments have devised various schemes for famine relief and the variations in the visitations of nature with their consequent periods of prosperity and distress have now been brought more effectively under human control than ever before in the history of India. It is not neces-

The problems connected with unemployment sary to go into the details of the questions. India are quite different from the problems connected with famine relief in this section. uch have arisen in highly industrialised. The point which it is intended to bring out. is that owing to the agricultural character of industrial labour in India, the problems con-nected with employment and unemployment are somewhat clesely related to those connected with the success or the failure of the monsoon.

> Speaking generally, the Indian labourer migrates to industrial centres when he finds that the yield of the land in his native place is not sufficient to maintain all the members of his family. A certain percentage of the workers employed in industry temporarily give up their employment during the sowing, transplanting and harvesting seasons. During periods and harvesting sersons. During periods of depression in trade and industry, industrial workers released from employment fall back upon agriculture and thus add to the existing pressure of the population on the lind. If the depression in trade and industry synchronises with the failure of the monsoon, the amount of unemployment the properties of the monsoon of the monsoon. ment becomes considerable and the resulting distress is enormous Various States have devised schemes of Laployment Exchanges for the purpose of studying the problems in connection with the den and and supply of labour, to control the movements of labour and to place it where it is req ired. The Government of India and the various Provincial Gov-'ernments have considered the question of

Employment Exchanges in creating India several times during the last ten years, but opinion is unanimous that owing to the preponderatingly agricultural character of Indian labour it is practically impossible Indian labour it is practically impossible to devise any satisfactory scheme for the formation of Employment Exchanges A vital difficulty for the adequate consideration of their problem has always been the want of satisfactory statistics to gauge the level of unemployment at any one period Continuous migration between industry and agriculture makes the task of collecting such statistics well nigh impossible Desultory attempts at measuring unemploy-ment in particular industries in lumited territories have, however been sometimes made One of the most recent attempts in this direction has been an enquiry into the extent of unemployment in the textile industry in the Bombay Presidency and the Central Proxinces conducted as a part of the Departmental Enquiries held by the Labour Office and the Department of Industries in 1934 at the request of the Government of Bombay and the Central Provinces on the general subject of wage Reductions in that It was found that the total number ındustry of hands displaced in cotton mills in the Bombay Presidency on account of closures of mills amounted to about 38,000 In the Central Provinces about 2000 workers had lost their 10bs between 1932 and 1934

India is a State Member of the International Labour Conference, and as such she is bound according to the terms of the Treaty of Peace, to ratify and adopt, wherever possible, any Convention or Recommendation adopted by the International Labour Conference The consideration of industrial unemployment was thrust upon the Government of India by the Washington Convention, which was adopted by the First International Labour Conference held in Washington in 1919. Each Member ratifying this Convention was required—

- (t) to communicate to the International Labour Office all information, statistical or otherwise, concerning unemployment, including reports on measures taken or contemplated to combat unemployment,
- (11) to establish a system of free public employment agencies under the control of the central authority, and to appoint Committees, including representatives of employers and workers, to advise on matters concerning the operation of these agencies,
- (111) where systems of insurance against unemployment have been established, to make arrangements, upon terms to be agreed upon between the members concerned, whereby workers belonging to one Member and working in the territory of another shall be admitted to the same rates of benefit of such insurance as those of the latter

In addition to this Convention, the First International Labour Conference also adopted a Recommendation which advocated—

- (a) the abolition of employment agencies, which charge fees or which carry on their business for profit,
- (b) the establishment of an effective system of unemployment insurance , and

(c) the execution of public works as far as practicable during periods of unemployment and in districts most affected by it.

The draft Convention was ratified by India but, in communicating this ratification to the International Labour Organisation at Geneva, the Secretary of State for India found it necessary "in order to avoid subsequent misunderstanding" to explain at some length the peculiar position of India in this matter and to emphasise the difficulties connected with a complete ratification by India owing to the predominantly agricultural character of the country. The Government of India, in addressing the local Governments on questions arising, out of the draft Convention and Recommendation adopted by the International Labour Conference, invited views on the following points.

- (1) Advisability of creating Public Employnient Agencies in congested areas to facilitate the migration of surplus labour to industrial areas where there is a shortage of labour
- (11) Advisability of utilising Public Employment Agencies in connexion with recruitment for Assam
- (212) Advisability of establishing Public Employment Agencies for the dissemination of information regarding employment during times of famine and scarcity to those in search of employment.
- (\*v) Advisability of appointing Committees representing employers and workers to advise on matters concerning the operation of Public Employment Agencies
- (v) Advisability of abolishing or controlling Employment Agencies which charge fees or which carry on their business for profit

The replies of the local Governments indicated that in most provinces the demand for labour exceeded the supply, that, even in provinces from which there was a large migration of labour, no difficulty had been experienced in obtaining information with regard to the areas where labour was in demand, that the establishment of public employment agencies would serve no useful purpose, and that such agencies might excite suspicion and be liable to be misunderstood by the people With regard to recruitment of labour for Assam, the local governments concerned were agreed that any experiment on the lines suggested would be risky. On the question of the abolition of control of employment agencies which charge fees or which carry on their business for profit, the replies of the local Governments indicated that employment agencies of this character were practically unknown in India. In the circumstances, the Government of India decided to take no further action on the draft Convention or Recommendation concerning unemployment.

Although it has not been possible for the Government of India to take any action in the matter of unemployment either by legislation or administrative action, a few local Governments have devised schemes intended to reduce unemployment. The Government of Bengal stated an unemployment relief scheme some three years for the financing of which a lakh of rupees per annum was sanctioned. The scheme contemplated the entertainment of two

Industrial Surveyors and the establishment of from other provinces four demonstration parties in each of soven selected industries jute and wool weaving, umbrella making, Cutlery, brass and bell-metal, soap making, shoe making and pottery The scheme was to take up, in the first instance the training of peripatetic demonstration parties, and in order to secure non-official co-orgination which was essential not only for getting recruits of the right type but also for creating an industrial atmosphere in a province pre-eminently agri-The formation of a non-official association in each District to be known as Industrial Association was encouraged and the local district boards were called upon to assist. As there were only 28 demonstration parties work under the scheme could not be started in more than tourteen districts at a time, up to the end of 1933 four parties for each of the seven industries except juto and wool were working in different parts of the Province, those of the students trained by these parties have started factories of their own and in which considerable numbers of people have tound employment

Middle-class unemployment—In recent years unemployment among the educated middle classes has been assuming alarming proportions and has attracted widespread public attention. In January 1926, a Resolution was passed by the Legislative Assembly in the following terms—

"This Assembly iccommends to the Governor-General in Council that he may be pleased to ppoint a Committee with a non-official majority investigate into the problem of unemployment general, and among the educated classes particular, and devise suitable remedies thether by a system of industrial and technical education, or by a revision of the existing system of education, or by offering encouragement to the starting of new industries, or by opening new avenues of employment, or by the evablishment of employment bureaux, or by all these or any other means, and that the said Committee do make a report on the latter problem as early as possible"

Sunilar Resolutions were also passed in some of the local Legislative Councils The Government of India did not consider that the appointment of a Central Committee would serve any useful purpose, but in a circular letter drew the attention of the local Governments to the gravity of the problem of middle-class unemployment ın India As a result of the Resolutions passed by the local Councils, Committees were appointed by some of the local, Governments The reports of most of these Committees refer almost c\clusively to middle-class unemployment, but the Punjab and the Bengal Committees also dealt with general unemployment Punjab Committee came to the conclusion that "there was no unemployment worthy of mention among the uneducated classes", whilst the Bengal Committee observed as follows

"The labourer, if we may use the term, has not middle of 1934 issuited in several of the closed set been divorced completely from the land, and he frequently possesses or has an interest in a small plot of land in his native place on the cultivation of which he can fall back in in the cotton mill industry in Bombay rose to times of depression. Added to this is the fact 1,35,000 and about 15,000 additional workers that industrial labour is still comparatively as badks or substitutes.

from other provinces. The effect therefore of trade depressions on the industrial labourer in Bengal is so far very small."

The Assam Legislative Council passed a resolution on the 13th September 1933 recommending to the Government of Assam the appointment of a Committee to consider the problem of unemployment, specially among the educated middle class people of the Province In the general discussion in connection with this resolution if was pointed out that exten-tion of technical education, industrial development and concentration on agriculture to a large extent use the only means of dealing the problem in the conditions prevailing in Assam. On behalf of the government it was stated that this subject was discussed at a conference, recently held under the anspices of the Government of India, of representatives of departments of industry in all the provinces of British India and some of the Indian States, when the desirability of establishing a central industrial research for considering the question of industrialisation was emphasized It was further stated that the Government proposed to establish agricultural colonies of educated young men, as an experimental measure, to make provision for helping technical institu-tions, to advance industrial loans to enable young men with the necessary training to set up small industries and to restrict, as far as possible, employment under Government to natives of the province. The Council was, however, informed that any action concerning this situation must have some reference to unemployment among the poorer classes as well

Jute and Cotton Mill Industries. In the jute mill industry in Bengal a large number of mills have, during the last two or three years, changed over from the multiple to the single shift system. It is estimated that on the single shift about 25 to 33 per cent less labour force is required than on the multiple shift, but in spite of the changes no trouble has been reported with regard to unemployment In the Bombay cofton mill industry, out of an average of about 140,000 workers employed during the years 1920 to 1927 approximately 20,000 have been thrown out of employment on account of the introduction of efficiency methods of work whereby spinners are required to mind two or three sides of a spinning frame instead of one and where the ordinary two loom weaver is lequired to tend three, four or six looms The Bombay Strike Enquiry Committee dealt with this aspect of the question in their report and they recommended the creation of an Out-of-Work Donation Fund This has been dealt with in the summary given with regard to the findings of this Committee in the Section on Conciliation and Arbitration Owing to depression in trade and external competition several cotton mills had compelled either to close down completely or to work with partial complements but the icinal of trade which set in about the muidle of 1934 resulted in several of the closed mills re-opening and work on high shift being started in several other Mails By the end of the year the total numbers of workpeople employed.

## INDUSTRIAL SAFETY AND INSPECTION.

As in other countries, the industrial progress dents classified according to fatal, serious and of India has been accompanied by an alarming minor in factories in each of the British increase in the number of industrial accidents Provinces in India in the year 1983 are shown Statistics for 1933 - The numbers of acci- in the following table -

Province	Fatal	Serious	Minor	Total
Nadras Bombay Rengal United Provinces Punjab Burma Bilhar and Orissa Central Provinces and Berar Assam North-West Frontier Province Baluchistan Ajmer-Merwara Delhi Bangalore and Coorg	15 38 49 32 10 19 23 5 2	306 1,320 884 373 53 233 391 54 71	1,179 4,050 2,697 1,574 886 1,245 1,567 221 363 46 783 94 72	1,560 5,425 3,630 1,979 949 1,497 1,981 280 438 47 752 99 72
Total .	194	3,776	14,739	18,709
Total for the 3 ear 1932	162	3,513	14,452	18,127

The explanation generally offered for the The Director and Assistant Directors of Public increase is that the Workmen's Compensation Act | Health have also been appointed as Divisional is operating as an inducement both for work- Inspectors under the Health and Sanitary people and employers to report accidents more frequently than in the past But the increase in the number of serious accidents suggests that the problem is a serious one and that an organised ex-officio powers safety first" campaign is very desirable in sections of the Act. India Some progress along these lines has been made in Bombay in the mills and on the railways

Factory Inspection —The administration of the Indian Factories Act is entrusted to Factory Inspectors in each province. Where injury whereby the person liqured is prevented breaches of the Act are discovered the managers from returning to his work in the factory of factories are prosecuted and in most cases during the 48 hours next after the occurrence such prosecutions result in convictions. All of the accident. All classes of accidents namely, such prosecutions result in convictions All of the accident All classes of accidents namely, provinces except Assam have Factories Departments In the Bombay Presidency the person returning to work for 21 days or more, full time factory staff consists of the Chief and minor are to be reported to the Inspector Inspector of Factories, three Inspectors, three of Factories and to the District Magistrate and Assistant Inspectors and one Woman Inspector The Chief Inspector, two Inspectors and two Assistants have their headquarters in Bombay City An Inspector and an Assistant are stationed in Ahmedabad . The Woman In spector has her headquarters in Bombay but has jurisdiction over the whole Presidency deals with problems mainly affecting women The Bombry Presidency is the only province in India which has a Lady Inspector of Factories. A part time Certifying Surgeon is stationed in Bombay and a full time one in Ahmeliana has been supported by the control of t Inspectors with powers under the Health and ment, even though no injury may have resulted Sanitary sections of the Factories Act They therefrom to any person So far notifications have also been granted powers under the providence of the Bombay Maternity Benefit Act, bay, Bengal and Burma,

sections of the Act Their reports are sent to the Chief Inspector who passes orders on the same Local Magistrates in the districts have under the Employment

Reporting of Accidents—The Indian Fac-tories Act requires the manager to report all accidents which cause death or bodily in cases of any accident resulting in death to the officer in charge of the Police Station It is the duty of the Inspector of Factories to make an investigation as soon as possible into the causes of and the reponsibility for a fatal or serious accident, and to take steps for the prosecution of the person concerned if it is found that the death or serious injury resulted from any infringement of the provisions of the Act or of the rules framed under the Act The Act also requires notice to be given of an tioned in Bombay and a full time one in Ahme-accident which is due to any cause that has dabad. They have been appointed as Divisional been notified in this behalf by a Local Govern-

1

Accident Prevention -The chief influences | secured promises from other factories to estabin the prevention of acadents are (a) the lish similar committees. nowers of Inspectors under the Factories Act to compel managers to erect adequate fencing and to take precautions against accidents, (b) the voluntary interest of managers in safety measures and safety precautions, and (c) the interest of insurance companies as a result of the operation of the Workmen's Compensation Act. In many provinces the existing rules made under the Factories Act cover Safety-First" measures such as compelling certain classes of workers to wear tightly fitting clothes, to prohibit children from entering mto certain parts of factories, etc Steady progress has been made in the different provinces in respect of 'safety first' propaganda, but with wide differences in caste and religion and with the low standard of efficiency the problem of organisation of safety services in industrial undertakings is a matter of some difficulty in India Particular attention was devoted in Bengal to the safeguarding of crowded michinery in the smaller factories and orders were assued during the year 1932 in that province to 52 factories to alter, repair or reconstruct their buildings Special attention was also directed during the year 1933 to the dangers connected with hydro extractors used in laundries and hovery factories and to the structural soundness of factory buildings Safety pamphlets were compiled and issued by the Factory Department in Bengal and Madras Continued progress in the fencing of machinery and in the use of safety posters is reported to have been maintained in all provinces and nereasing attention is being paid by employers curoughout India to safety measures and to the inculcation in the factory employee of "Safety first" idea. In Bombay a certain amount of ground had already been broken and the Factory Department in co-operation with organisations of industrial employers produced a set of four 'sifety posters' some years ago and these have been very largely exhibited in the engineering workshops in the Presidency Posters were also produced for the carding and spinning departments of cotton mills. The Red Cross Society was assisted in producing an All-India poster dealing with a universal risk connected with the wearing of loose-clothing which is ordinarily worn by the average Indian worker Encouraged by the results of the posters introduced in Carding and Spinning Rheds the troduced in Carding and Spinning sheds the Millowners' Mutual Insurance Association, Bomhay, produced a set of posters for the weaving department early in 1981 and these are now in fairly general use Little has, however, been done in the factories of the Bombay Presidency in the way of specific organisations to further the cause of safety Factories, too, are not sufficiently large to warrant the employment of a safety engineer and reliance has almost totally been placed on the activities of the inspectorate in this particular direction Safety Committees have, however, been established in two cotton mills representative of the two largest groups in Bombay, as an experimental measure and in the R J M Dockyard, the G I P Railway Workshops and in the Bombay Electric Supply and Tramways repair shops in Dombay Safety Committees have been brought into existence in more than 20 mills in Ahmedabad and the Factory Department has

Mr A Trollip, Deputy General Manager of the Bombay Electric Supply and Transways Co, Ltd, started a Safety First Association in Bombay in 1933 and he is President of this Association, The Association Holds frequent Meetings at which subjects relating to safety Meetings at which subjects
first are discussed and it also publishes a safety
first Magazine periodically. The office of the first Magazine periodically. The office of Association is at Esplanade Road, Bombay

The railways are of course pioneers in the introduction and the continuance of active propaganda in "Safety-First" work in all departments. These activities cover railway workshops (which come under the Indian Factories Act) as well. There has been marked improvement as regards minimising accidents in railway workshops as a result of the activities of safety committees which have been established in some of them The success of safety committees which has been established at the S I. Railway workshops at Perambur and Golden Rock has been demonstrated by the fact that at the latter works accidents decreased by 53 per cent in 1932 as compared with 1931. A very comprehensive Safety First Organisation was established in the Parel, Matunga and Manmad Workshops of the G I P Railway in 1929 The Railway administration also distributes to the employees an illustrated pamphlet on Safety First in which a chapter on workshop safety is included. The G I P organisation is stated to be the best of its kind. Safety Committees have also been formed in the R. I M Docky ard and the Bombay Electric Supply United Tramways Company In the Provinces no industrial undertaking has yet introduced a safety service organisation. The Welfare Committees of the E. I. Rallway Locomotive and Carriage Workshops, Lucknow, do at times discuss at their monthly meetings questions of safety brought forward by members. Safety posters, published by the Railway Administration, are displayed in all their workshops and the Indian Red Cross Society posters in all factories in the province In furtherance m all factories in the province In furtherance of the 'safety first' movement in Bengal warning hooters or sirens have been installed in the textile factories so as to warn employees before the power plant and machinery is set in motion An instructive handbook entitled "Safety in Factories" dealing with general matters con-cerning the safety of factory operatives has been compiled and published. An agreement in regard to standard guards and safety devices for jute machinery has been signed by the Indian Jute Mills Association in regard to new machinery to be installed after July 1932 Posters supplied by the Indian Red Cross Society illustrating the suitable type of dress to be worn by operatives while working on transmission machinery were distributed to transmission machinery were distributed to factories in the different provinces, and safety propaganda of various kinds is receiving increasing attention from the large factory owners and the inspecting staff Perhaps the best known instance where first class "safety first's rock is being exceeded by the control of the c work is being carried on in India is that done by the Tata Iron and Steel Company at Jamshedpur The Company has since 1920 subscribed to the British Industrial Safety First Association

and has installed notice boards all over the are easily available in cases of accidents plant exhibiting the posters supplied by that Millowners Association, Bombay, started classes Association. The literature received from the for First Aid training in conjunction with the Association is periodically broadcast through. St. John Ambulance Association in 1981 out the world.

The Railway Department conducts intensive "Safety-First" propaganda every year which embraces the following among other activities .-

- (1) Safety posters and safeguards are put up on prominent points both in English and in the vernacular Some of these, eg, on the Bombay, Baroda and Central India Railway, are prepared from actual photographs of safe and unsafe methods of working in selected branches of manufacture and maintenance work in the railway workshops.
- (2) An illustrated booklet was compiled by the Great Indian Peninsula Railway during the year 1926-27 which has been translated into a number of vernacular languages and distributed throughout the line on certain railways.
- Photographs and special articles are (3) published in the Railway magazines for the instruction of the staff.
- (4) Inspecting subordinates are instructed to take the opportunity, while visit ing stations, of addressing the staff on "Safety-First".
- Coloured pictures showing the right and (5)wrong way of doing a job are posted at various places for the benefit of the illiterate staff.
- (6) A "Safety-First" film was prepared by the Central Publicity Bureau during the year 1927-28 and copies distributed to railways. The film is dis-played weekly by the travelling cinemas of the railways.
- (7) A "Safety-First" pamphlet has been prepared by the Central Publicity Bureau and is being issued to all railway administrations.

First-Aid and Medical Rehef—Some of 6 Local Governments have framed rules requiring the provision, under the charge of responsible persons and in readily accessible positions, of first-aid appliances containing an adequate number of sterilised dressings and some sterilised cotton in all factories employing 500 and more operatives. Most of the factories are situated within easy reach of Government hospitals or hospitals maintained by The number of persons killed is 47 less than Local Authorities but many of the larger and in 1932 130 of the persons killed were men enlightened employers are already maintaining and 23 were women. In four cases three their own medical staff and equipment which and in two cases two lives were lost

John Ambulance Association in 1981 These classes have been successful and facilities have since been provided for the training of men deputed by the Engineering Safety Committee also In the Tata Iron and Steel Works at Jamshedpur boxes with first-aid supplies are maintained in each department and two first-aid hospitals in different parts of the plant are staffed with doctors and compounders in readiness to render first-aid to injured persons
During 1934 the Assistant Commissioners of
Labour of the Government of Bombay who
visited about 750 perennial factories in all parts
of the Bombay Presidency Proper requested
all managements to instal first aid boxes in all departments as far as possible

Mines —The Indian Mines Act of 1923 empowers the Governor-General in Council to frame regulations for the safety of persons employed in mines (Section 29, clauses (k) to (p) Local Governments are the to frame rules under the Act to ensure the protection of proper fencing of a mine for the protection of the public in addition, the Chief Inspector of Mines may call upon the owner, agent or manager of a mine to frame bye-laws which are not inconsistent with the provisions of the Act, regulations or rules to prevent accidents and to provide for the safety, convenience and discipline of the persons employed in the mine (Section 32). The bye-laws, when approved by the convenience and convenience and convenience and convenience are convenience. by the Local Government, have effect as enacted under the Act Further, Section 19 of the Act gives special powers to the Inspector of Mines to take action when any danger is apprehended which is not expressly provided for by the Act, regulations, rules and the bye-laws The Governor-General in Council has framed two sets of regulations, namely, the Indian Coal Mines Regulations, 1926, which apply only to coal mines and the Indian Metalliferous Mines Regulations, 1926, which apply to all other mines These regulations provide for the proper maintenance of shafts and outlets, roads and working places, haulage arrange-ments, fencing and gates, for the restrictions which have to be observed in raising or lowering persons or materials, for the precautions to be taken in the use of explosives, and for adequate ventilation and lighting.

During the year 1933 at Mines regulated by the Indian Mines Act, 1923, there were 142 fatal acci-dents, which is 21 less than in 1982, and 58 less than the average number in the preceding five years. In addition to the fatal accidents there were 655 serious accidents involving injuries to 670 persons, as compared with 600 serious accidents involving injuries to 613 persons in the previous year. No record is maintained of minor 153 persons were killed and 702 peraccidents sons were seriously injured The latter figure includes 32 persons injured in fatal accidents In four cases three lives,

## WORKSITY'S COMPLYSATION

The Workmen's Compensation Act of 19 which was the fire piece of a passed in this country, execute the confidence of the Some of the wh brigades, telegrich and televisewage worler and trans in and as the definition of kless f to those employed on extremely only there said pt presented the 1 ( B 1 tion for somen, howe er he 1 n agreement between the troversum at of it Us at foreign steam-hip compant, under which the latter a rea to the in artifer he the ever articles of a clause which by the court int agree to pay compan thon to input d in his sounce on the same but to as if they were cover ed by the Actand all questloas a to compention are decided by Commissioners of Warling a's Compensation in India acon sentine and employed on a British ship keally comes under the English Act and the insertion of the class : referred to above does away with the proofbal difficulties which would arise if Indian ream a had to claim compensation in the Inglish of other foreign courts. The flyt main classes of working covered by the Act are worker in factories, mines, docks and on rilluit practically all of whom are included and this ere word in certain types of building work, notably the construction of industrial and commerci d buildings and any other buildings which more than one stores The most important classes excluded altogether in agricultural workers and domestic servints Non-manual labourers getting more thun Rs 300 a month are excluded, except on the railwass Power was taken to include other hazardous occupations by notification from time All occupations involving by were thus declared by blasting operations Governor-General in Council as hazardous occupations Compensation is to be given as in the English Act, for personal injury by accident arising out of and in the course of any dependent) and any lump sums payable employment. It is also to be given for diseases in certain cases. The provisions for diseases is loner; (3) deposits of trivial amounts a collection of the provisi proximen contrasts a scheduled disease, it will provision was made for the protection of lumi

Act

The Amending Acts of 1929 and 1931— The milit to be of the tro-day let of 1020 were (1) the disciplinately restriction The main territy placed on working a employed in the construction repair or demolition of a building or bolde with reard to their incligibility or compensation except in the case of death or permitted to disablement with removed. (2) all payments to depend on the decree working (except advances to the extension of its 50 for inneral expensation of the decree working and to the extension of a hundred expensation.

hundred worlmm and to the extent of a

sums parable to a woman or a person under brought within the scope of the Act Not legal distribute by empowering the Commissional workmen employed within the precincts of stoner to invest, apply or otherwise deal with a factory but also men engaged in any kind of them for the benefit of the woman, or of such work incidental to or connected with work (6) the benefits of the Act were extended to (a) any person employed for the purpose of loading, unloading, fuelling, constructing, repuring, unloading, fuelling, constructing, repairing, demolshing cleaning or painting any ship of which he is not the master or a member of the crew, or (b) employed on a railway as defined in Sections 3 (4) and 148 (1) of the Indian Rulways Act, 1890, by a person fulfilling a contract with a railway administration, or (c) employed as an inspector, mail guard, sorter van peon in the Railway Mail Service, or (d) employed in connexion with operations for winning natural petroleum or natural gas, as a rig-builder, driller, driller's helper, oil-well puller or bailing or cleaning oil wells or putting in and taking out casings or drill pipes in oil wells or (c) employed in any occupation involving blasting operations

In 1931 the Act was further extended to cover workmen engaged in the construction, etc., of aerial ropeways

The Amending Act of 1933—The Royal Commission on Indian Labour made 2 number of recommendations for expanding the scope of the Workmen's Compensation Act, 1923, and on effecting improvements in it The Government of India, in the Department of Industries and Labour, introduced a Bill in the Legislative Assembly on the 22nd February 1932 giving effect to the Commission's recommendations and it was passed in It came into force on 1st July 1983 but certain sections of the Amending Act were brought into operation from 1st January 1934 in order to give time to the industries covered for making the necessary insurance arrange-ments in view of the alterations made in the amourts of compensation payable. The principal amendments made in the Act are as follows -

- The definition of "dependent" has been recast so as to divide dependents into two entegories, placing in the first those who are in practically all cases actually dependent and in the second those who mix or may not be in that position. Midoned daughters, widoned sisters and nidoned diaghters-in-law as nell as illegitimate children have been included in the list of dependents
- (b) The scope of the Act has been extended so as to cover as completely as possible all workers in organised industries whether their occupations are hazardous or not and a step has been taken in the direction of extending the benefits of the Acts to workers in less organised industries when employment is subject to much risk The distinction which existed between seamen employed in the ships registered in India and those in ships registered in foreign countries has been removed. Any person employed as the master or a seaman of any ship which is propelled by mechanical power or towed by a ship so propelled as well as in any other kind of ship whose net tonnage is 50 tons or more are | and so much of such aggregate as does not exceed

person during his disability, (5) powers are in a factory are entitled to the benefit of the vested in the Commissioner to recover any Act Other classes of workers included within amount obtained by any person by fraud, the scope of the Act are drivers of private impersonation or other improper means and inotor cars, norkers employed in handling explosives or in the construction of any building twenty feet or more in height or in the construction, working, repair or demolition of any aerial ropeway or in any occupation ordinarily involving outdoor work in the Indian Posts and Telegraphs Department, or in the operation of any ferry boat capable of carrying more than ten persons or in any estate which is maintained for the purpose of growing cinchons, coffee, rubber or tea, or in a lighthouse as defined in clause (a) of section 2 of the Indian Lighthouse Act, 1927, or in producing or exhibiting cinematograph pictures, or in the training, kecping or working of elephants or wild animals or employed as a diver

- (c) The waiting period has been reduced from ten to seven days
- (d) The scales of compensation for death and permanent total disablement which are graded according to seventeen wage have been considerably enhanced and minimum rate introduced represents an increase of over 100 per cent on that given under the original Act, while the maximum is increased by 60 per cent The basis of calculation of the amount of compensation in the case of death or permanent total disablement is the same as before, a e, 30 months wages for the former and 42 months wages for the latter for adults The maximum amounts of compensation for death and permanent total disablement have been increased from Rs 2,500 and Rs 3,500 to Rs 4,000 and Rs 5,600 respectively. In the case of minors there is no change in the amount of compensation for death but the maximum compensation for permanent total disablement has been prescribed at a uniform rate of Rs 1,200 as against 84 months wages or Rs 3,500 whichever is less in the original Act The maximum limit to the amount of halfmonthly payments in the case of temporary disablement to both adults and minors has been raised from Rs 15 to Rs 30
- (e) New provisions have been inserted into the Act enabling the interests of dependents in cases or fatal accidents to be better safeguarded by ensuring that (i) in a many cases as possible, fatal accidents are brought to the notice of Commissioners, (ii) where the employer admits liability, compensation is to be deposited promptand (111) where the employer disclaims liability and there are good grounds for believing compensation to be payable, the dependents get the information necessary to enable them to judge if they should make a claim or not
- A contractor has the right to be indemnified by his sub-contractor if he has had to pay compensation either to the principal or to the *n* orkman
- (9) An employer may make to any dependant advances on account of compensation not exceeding an aggregate of one hundred rupees

The details of agreements (i) disposed of, (ii) registered as filed and (iii) rejected on account of inadequacy are given below for each year -

	-	Number of Agreements.					
Year		Disposed of.	nsposed of. Registered as filed.		Not registered on account of inadequacy, etc		
1924 1925 1926 1927 1928 1929 1930 1931 1932	•	41 899 591 701 887 1,046 1,007 1,060 998 1,033	33 390 583 682 855 1,024 950 1,018 942 985	1 3 5 12 25 14 29 18 22 18	7 6 3 7 8 28 24 29 30		

enhances n orkmen's compensation the cost of production but not to any appre-ciable extent. In the case of coal mines, the increase in cost has been estimated to be not more than annas four per ton of coal (vide para Ji of the Report of the Indian Coal Committee, However, the owners of many of the smaller coal mines were compelled to close down that came up before the Commissioner their mines but this was due mainly to the severe depression with which the industry was faced In the Punjab the proprietors of the coal mines in the Jhelum District were reported to be not satisfied with the privileges enjoyed by the miners under the Act as some of accident more than they could earn during a An unexpected increase in the number of serious and fatal accidents may undoubtedly make a big hole in the profits of a concern but the remedy for this lies in accident insurance ant of these are the Claims Bureaux in Calcutta does not appear to have made much progress.

Effect on Industry —A compulsory system; and Madras The Calcutta Claims Bureau which represents many of the leading insurance companies operating in India deals with a large number of claims and offers valuable co-operation to the authorities in settling compensation In Bombay, claıms insurance companies were concerned with half the number of cases ance Companies as a rule contest only cases in olving questions of law or principle and are of benefit to all concerned. In these provinces insurance is widely resorted to by the employers especially in the Textile Industry. The Millowners' Mutual Insurance Association, them had to pay as compensation on a single Ltd , Bombay, is an organisation of employers one of whose objects is the Mutual insurance of members against liability to pay compensation or damages to workmen employed by them or their dependants for injuries or accidents, fatal or otherwise, arising out of or in the course or employment The Association has about 60 Facilities for accident insurance are now being or employment. The Association has about 60 provided by a number of leading insurance members and a controlled by a Board of Directompanies in this country and the most import- fors. In other Provinces accident insurance

## INDUSTRIAL HOUSING.

One of the most vital problems facing industrial employers in India to-day is that connected with the housing of the labour which they The importance and the urgency of providing decent housing cannot be sufficiently

The conditions of industrial housing in India arc, in many cases, appalling and the majority of buildings, tenements or huts in which indus-trial labourers are housed are insanitary and more or less uninhabitable from Western points of view Provincial Governments, Municipalities, Improvement Trusts and the larger employers have done a great deal to mutigate the evils resulting from an insufficiency of decent sanitary housing for labour, but a considerable amount still remains to be done before this question can be considered to have been satisfactorily solved.

Several commissions and committees inquiry appointed by the Government of India and the Provincial Governments in connection with various subjects have dealt with the question of industrial housing The Industrial Commission in 1918 urged that, in addition to the scheme followed by the Improvement Trust in Bombay, other measures should be adopted such as the refusal of permission with a few exceptions, to fresh industrial concerns to be established, the setting up in cities of special areas, for industrial development, the removal of the existing railway workshops from cities, supply of housing accommodation to employees by railways, Government departments and public bodies, improved communications with a view to creating industrial suburbs, and a definite programme of construction to be taken up by local authorities. The findings of other commissions and committees with regard sahould be, placed in a prodition to recoup the to this question follow similar lines.

with Industrial Housing These recommends. tions fall under various extenories, (1) Legisla-Provincial Covernment will be in a position to tive Action by the Central Covernment; (2) do much in the matter of the Commissions Administrative Action by the Control Govern-Governments, (1) Administrative Action by Provincial Bombay Presidency. -The first attempt Action by public bodies such as Municipal action of the latter of palities, Improvement Trusts, etc., and (6) action by Employees and Workers organizations The recommendations under the first head included a suggestion to amound "by Land requisi tion Act in such a way as to analic owners of industrial concerns to acquire 1 and for the rectaining lands from the sea to provide rectaining lands from the sea to

grants and loans to approved schemes for administrative action by Local Governments the Commission recommend that they should make surveys of urban and industrial areas to make surveys of urban and industrial areas to asserting their needs in regard to housing, and that they should their arrange for conferences with all interested parties in order that decisions may be taken as to practicable schemes, and the methods whereby their cost should be shared Where suitable Government land is available, Government should be prepared to sell or lease costential necommodation only for employees in the United and Ward Department and the to those who agree to build houses within a specified period, and Government should announce their willingness to subsidise in this or other ways employees' housing schemes approved by them. The Commission further recommended that Government should insist that all local authorities should frame his last that all local authorities should frame his-laws laying down minimum standards in regard to floor and cubic space, ventilation and lighting and that the Governments themselves should draw up regulations for water supplies, drainage schemes and standards for lattines. For action schemes and standards for latines For action by Public Bodies, the Commission recommend that the provision of working class housing should be a statutory obligation on every improvement Trust and that it should be possible for Improvement frusts to provide land, roads, sewers and sanitary conveniences for new areas but that street lighting and water mains should be a charge on Municipalities. Improvement Trusts industrial labour till after the end of the war. A

selves from the enterior of and sales icolling from their activities. It has also been suggeted that co-operative building Labour Commission's Recommendations -- societies and climber activities should be extended from the Royal Commission on Indian Labour have coursed. In the secret, of the present made several reconsecudations in councilon acute manel destring my prevailing in a Province: It is very doubtful whether most of the recommendations on Industrial Honsing

to improve non-ing conditions in normal circuits that after the planne of 1898 when the lieux morfilly and the great evolusity followed participal the trade and industry of Bombes. The Rombes, Improvement Transport to blank of mix Assembly to amend the Lind Acquisition Act in the manner suggested and this Bill was present of into law in 1933. The Commission's Commendations under the second head incommendations under the second head mostly concern Railways, and although the Railway Board agrees on the Mal urgener of providing greater facilities for misquate housing it has come to the conclusion that no material advance can be made in this direction at present owing to financial stringener. of providing greater facilities for allequate housing it has come to the conclusion that no material advance can be made in this direction at present owing to financial stringency.

The Commission's recommendations with regard to logislative action by Provinces are of a very ambitious character They include Town Planning Acts for the Bombay and the Bengal Presidences providing for the acquisition and lay out of suitable areas for working class housing, the opening up and reconstruction of congested and insanitary areas, the "Noning" of industrial and urban areas and Government grants and loans to approved schemes. For administrative action by Total Government and ministrative action by Total Government and ministrative action by Total Government and ministrative action by Total Government and their chawls not the direction of the seven and their thousand seasongers employed are half thousand seavengers employed are movided with quarters. Varying proportions of the numbers of employees in the other departments of the Municipality are also provided with idequate housing. According Railway owns 20 chan is containing 841 one-room tenements and the B B & C. I Railway owns more than 800 one-room tenements for howing their employees The Labour office of the Gov-crument of Rombay conducted an elaborate enquery into Industrial how-ing in all perennial fectorics in the Bombay Presidency Proper in 1934 as a root of the Grapus Wage Census but 1934 as a part of the General Wage Census but the results of this investigation were not published at the time when we went to Press

found in occupation of unlicensed premises the management is liable to prosecution. No rent is however charged and subletting is not known

The Tata Iron and Steel Works at Jamshedpur have built nearly 5,000 residential buildings Of these, 301 are rented at over Rs 20 per month Sixteen are rated as hotels. The accommodation provided at present is insufficient and one of the problems the Company will have to face is the provision of a larger amount of housing

Punjab—Housing conditions of industrial workers in this Province is reported as continuing to show steady progress. Most of the newly constructed factories have provided quarters for their permanent staff. Although at present less than 30 per cent of the total permanent labour strength of the factories are housed in factory quarters there has been a distinct advince in this respect in 1933, and in all cases where housing was provided the accommodation was in superior to that which the workers could ordinarily obtain outside the factory premises

Assam —Free quarters are provided for all residential employees on tea estates. Such non-resident labour as is employed is casual labour which comes from the adjoining villages and livesin its own houses. In the mines and oil fields free quarters are provided for the labour force employed. A Committee of Inquiry appointed in 1921-22 recommended that endeavours should be made to house immigrants from different provinces together in hamlets instead of putting workers from all provinces undiscriminately into barracks or lines. The main objection to this recommendation is the want of land as all available land is under tea. The housing conditions in the coal and oil fields are reported as being quite satisfactory. In Assam the tea estates are

regularly inspected by District and Sub-Divisional officers. Although the legal powers of interference have been curtailed by the aboltion of indentured labour and the repeal of so much of Act VI of 1901 as related to such labour, still in practice the inspecting officers do invariably report on the condition of the lines. They call attention to the need of improvement and the management is generally ready to effect such improvements as are considered necessary.

Other Provinces—No special remarks are necessary in connection with the question of industrial housing in other provinces Generally speaking no industrial slums as such or any big urban inflammation due, to the presence of agglomerations of factory or other workers is particularly noticeable and the housing of labour is not to be differentiated from the ordinary poor citizen.

Except in those cases where Government action has been definitely indicated, the governments of the various other provinces in India have done nothing for the improvement of industrial housing

Railways—The general policy on railways is to provide residential quarters where it is necessary for special reasons to provide accommodation for certain classes close to their work and where conditions are such that private enterprise does not adequately meet the demand for housing the staff. The total expenditure incurred on housing provided by the primapal railways since the commencement of operations amounts to nearly twenty-six crores, while the expenditure incurred during the last five years amounts to over seven crores. Notwithstanding this expenditure there is, at present, a considerable dearth of quarters on most railways. Indeavours are, however, continuously made to construct new houses in accordance with an annually pre-arranged programme as funds permit.

#### HEALTH.

No satisfactory statistics are available regardang health conditions of industrial workers, eg, morbidity rates among the workers, their average weight, height, etc., and in the absence of any sound statistical data it is not possible to generalise about these matters. The proplems associated with health are always diffiult, they are much more so in a country where both climate and the poverty and ignorance of he people contribute to recurring outbreaks of ropical and other epidemic diseases. The ill-health cause particularly of among the workers in Bombay and Bengal. prpears to be the prevalence of malaria in the ocalities in which they live Major Covell, the Special Officer appointed by the Government of Bombay to enquire into Malarial conditions in Bombay City who submitted his report in look says "It (Malaria) is still present in 1928, says tertain quarters of the southern portion of the City to a serious extent, but the most intense malaria at the present time exists in the vicinity of the mills, more especially in Work and Parel jections In the

Worll section, malaria is also slight, but as soon as the edge of the mill area is reached the incidence of the disease rises abruptly and extends over the greater part of Worll and Parel. The correlation between the intensity of Malaria and the proximity of mills was most striking, especially in certain cases where a single isolated mill happened to be present, sy, the Victoria Mill in Chowpaty and the Colaba Land Mill in Chowpaty and the Colaba Land Mill in Colaba. The vast majority of the mills in Bombay are situated in the highly malarious area." The anti-malarial measures taken by the City Municipality have however resulted in a gradual reduction of the number of deaths from malarial attacks.

In the mines in the Madras Presidency, Malaria prevails in the Cuddapah district and his report in Malaria) is still present in the southern portion of the step, but the most intense in time exists in the vicinity specially in Worli and Parel northernmost portion of prevails among industrial workers in the United

Provinces and Bihar and Olissa, and Kala Azar is common among workers in certain tracts like Bihar and Orissa

The following table gives the birth and death rates and the rate of infant mortality per thousand of the population for some of the important industrial centres. The figures, however, relate

to the whole population in most cases and as such are not likely to give an adequate idea regarding mortality, etc., among industrial workers. Besides, in certain cities like Bombay, it is customary for married working class women to leave the city for their confinement and register births in the mofussil.

A table showing (a) Birth-rate and (b) Death-rate per thousand of population and (c) Infant-mortality for 1,000 registered births for certain important industrial centres

Working ment in Bombay has done much work in invest- in most perennial factories igating the efficiency of different humidifying and ventilating plants in the weaving and spinning departments of Mills in Ahmedabad As a result, all the new textile mills which have been constructed in Ahmedabad during the list few years are equipped with efficient ventilating and cooling systems and the benefits both to the workers and the processes involved are well recognised at that centre There has been an extensive 'uplift' in the older mills and there is hardly a mili that has not made efforts in the direction indicated There has latterly been a marked tendency to increase the pace of improvements in the spinning departments and one group of mills has installed 12 expensive plants that effectively cool and humdify the atmospheres of the spinning as well as of the wearing departments." A few mills in Bombay City have also installed new cooling and humiditying systems. A few other mills provide vacuum stripping apparatus in the carding departments A plenum system of blowing external air near the workers in the boiling department of a soap factory produced results gratifying both to the worker and the management and it is hoped to extend the method to a few industries where the removal of surplus heat is a difficult matter. An enquiry made into the effect of employment on the health of the dhobi bleachers in Ahmedabad revealed that although there was little history of rheu-niatism, some are adversely effected by working Several workers were with bleaching solutions tound to be suffering frim hyperaemia of the legs, but it was obvious later on that more care was being exercised by the contractors of the dhobs work is done in uncovered tanks the compounds and no shelters are It is said that the men are used to working in the hot Ahmedabad sun, but even the donkets used so freely for load carrying take advantage of the shade when they are permitted to do so! The Bengal Reports refer to the question of dust removal in Jute Mills and lea factories and to the investigations made to determine at what stage dust or fluff impregnation may be regarded as definitely injurious It is considered that where exhaust trunk extracting systems are deemed to be essential in all factories in an industry the necessity to instal such equipment should be promulgated by rule. The continued trade depression, however, precluded the issue of a general order by Government The majority of firms find the initial cost of such installations prohibitive but a few concerns have provided mechanical ventilation in their factories Although some s entilation lias improvement been m effected during the years 1932 and 1933, the bad design and unsuitability of the majority of the buildings occupied by the smaller factories is stated to be still the chief obstacle to all nound progress In regard to Cotton ginning factories the Punjab Reports state that "ventilation is far from satisfactory but apart from a drastic alteration in the method of gnning little can be done to 'improve ventilation sufficiently to dispose of the dust in ginning rooms, the cost of such alteration is at present prohibitive" The Central Provinces' Reports mention that ventilation arm

conditions -The factory depart- on the whole, shown satisfactory improvement In the present conditions, owners of ginning factories are unable to adopt the expensive system of ducts and exhaust fang to overcome the dust nuisance The provision of ridge ventilation in cotton has been ginning factories practice in the United Provinces in respect of new factories and is reported to have proved satisfactory when combined with a reasonable height of roof Ventilation in other factories is steadily improving though the progress is not quite rapid due to depressed trade conditions The extended use of electricity is steadily improving the general standard of lighting and is commended on with approval in the Provincial factory reports for the year 1933 The factory department in the province of Bihar and Orissa has compiled a little guide book to "Safety, Lighting and Ventilation in small factories," based on photometric observa-tions, in order to help interested persons and builders of factories to so adjust the window area as to secure sufficient amount of natural lighting

> Extent of Medical Facilities provided—The results of a recent enquiry into Welfare work conducted by the Labour Office shows that the provision of facilities for medical attendance and the supply of medicines is falrly general in all the larger labour-employing organisations in the Bombay Presidency. Textile Labour Union in The Ahmedabad ls the only association of employees which provides medical facilities for its members There are also Government, Municipal or charitable hospitals and dispensaries which are open to the public and which are used by the labouring classes In the United Provinces, many of the larger employers maintain dispensaries but no hospitals. The Dufferin Fund, a private organisation aided by grants from Government and local bodies, maintains female hospitals at the more important towns The Lady Chelmsford Maternity and Child Welfare League maintains a number of centres for child welfare and the Many of the treatment of maternity cases Many of the employers in the Central Provinces and Burning have provided well-equipped dispensaries, and medical facilities are within easy reach of the workers in almost all the factories and every important mining area in the Province of the larger concerns in Bihar and Orissa and in the Punjab also provide medical facilities for their employees In Madras only a few large factories provide dispensaries Medical facilities in the plantations are, however, fairly good All the jute mills in the neighbourhood of Calcutta provide dispensaries but most of the doctors in charge are not registered medical graduates Owing to financial stringency the Indian Jute Mills Association were unable to take any action on the welfare survey conducted by a lady doctor in the mill area and leprosy survey carried out the school of tropical medicine In spite of the general depression, the Julta Iron Works built a hospital with up-to-date equipment. In all the tea gardens in Assam and in Bengal medical attendance and medicine are provided for all classes of ees The medical arrangere vised by vre super

provided in the mines in Madras In the Illuria women, or 62 per cent of the comployed, were Mining Settlement eight hospitals are main-pild benefits amounting to its, 43,447-4-6 tained by employers, the number of bods vary. The Bombix Municipality has started since light

sanitary conditions in the larger factories is reported in all provinces. In Bombay concentra tion on several factories of the bazaar type Bombis During the year 1913 benefits amount-has led to considerable improvements and a ling to Rs 9 33 were prod to 130 women worker, rise in the standard of neighbouring smaller is compared with Rs 12,394 pold to 605 women concerns not yet amenable to this Act. The workers in the previous year lack of municipal facilities for the disposal of trade waste in Alimedabad is stated to be a large deposal of information for the large been adopted by almost every ten estate of results and the large been adopted by almost every ten estate of results. area Conditions in the Dharaxi Tanneries in of repute While pregnant women remain the Bombay Presidency were injectigated at work, they are put on light work on full rates during 1932 and considerable improvements of pay During the period of advanced pregwere effected. There was marked improvement in more and after childbarth leave on half pay is were enceted. There was marked improvement in the sanitary conditions of fectories in the sanitary conditions of fectories in the usually granted and in some cases full pay is Titaghur area in Bengal on account of the successful installation of a rewerage scheme granted in addition. The bonus is in some cases. The Bihar and Oriesa report for 1932 state that conditional on the child being healthy. The the advisability and possibility of appointing Medical Inspector of Lactories was under consideration of the local Government. The united Provinces Report refers to occasional cases of persons suffering from obnovious officers and after childbirth leave on half pay is in the sanitary conditions of the local Government. The united Provinces Report refers to occasional cases of persons suffering from obnovious officers and afterd hospital once a week. The diseases being employed in food product factor. Assum Oil Company grants leave on half pay discases being employed in food product facto- Assam Oil Company grants leave on half parties and states that the Medical Officers of for three months On some estates in Com-Health were asked to give this question attention before District female coolles are fed free for campaign A incdical officer has also been arranged appointed at a new factory established in Bombay for the manufacture of lead accumulators

## Maternity Benefits.

In September 1924, Mr N M Joshi made the worker are the following .first attempt in the Legislative Assembly to introduce a Bill to make provision for the introduce a Bill to make provision for the payment of maternity benefits in certain industries. Under this Bill, the Local Governments postponed action on this recommendation indeverted be asked to establish a Maternity Benefit limitely for want of funds.)

Fund and to make payments out of the postponed action on this recommendation indevented by the postponed action on the recommendation indevented by the postponed action on the recommendation indevented by the postponed action on the recommendation indevented by the postponed action on the payment of th Fund and to make payments out of this Fund The Bill, after circulation, was thrown out by the Assembly in August 1925

The first Province in India to pass a lorce in all Provinces.

Maternity Benefit Act was Bombay The Act (d) In industrial provinces Public Heat came into force on 1st July 1929. According Departments should be strengthened to de to this Act, the payment of maternity benefits with industrial hygiene and industrial disease. is an obligation which is imposed directly on the employer. The Annual Report on the administration of this Act for the year ending 30th June 1933 shows there were 11 7 Claims paid per 100 women employed and the total amount of maternity benefit paid under be passed in all Provinces.

equipped hospitals are also provided for the the Act was Rs 1,35,813. The statistics for the labour force in the mines and oil-fields in Assam, half year ending December 1933 show that out Part-time medical attendance and incidence of an average duly number of 13,809 women are provided by the employers in the Assasol employed in the areas to which the Act applies, Mines Board Area. Medical facilities are also 3,110 women applied for benefit and that 2,723 more labeled in the mines in New York and that 2,723 more labeled in the mines in New York and the contract of the mines and that 2,723 more labeled in the mines in New York and that 2,723 more labeled in the mines in New York and the mines are also 3,110 women applied for benefit and that 2,723 more labeled in the mines and oil sections of the mines and oil sections of the mines and oil sections of the mines and oil sections of the mines and oil sections of the mines and oil sections of the mines and oil sections of the mines and oil sections of the mines and mines and many than the mines and mines are also as a section of the mines and mines and mines are also as a section of the mines and mines are also as a section of the mines and mines and mines are also as a section of the mines and mines are also as a section of the mines and mines are also as a section of the mines and mines are also as a section of the mines and mines are also as a section of the mines are also as a section of the mines are also as a section of the mines are also as a section of the mines are also as a section of the mines are also as a section of the mines are also as a section of the mines are also as a section of the mines are also as a section of the mines are also as a section of the mines are also as a section of the mines are also as a section of the mines are also as a section of the mines are also as a section of the mines are also as a section of the mines are also as a section of the mines are also as a section of the mines are also as a section of the mines are also as a All the Provincial Factory Reports for the ing women in the form of leave with year 1933 record a year of normal health amongst full pay not exceeding 42 consecutive factory workers. There was no dislocation of leave, including the date of confinement, as including the date of confinement, as during the year 1933 except perhaps to some birth takes place in Bombay, and by a Police extent in Poona on a count of the severe epidemic part or by hospital authorities if it takes place of plague in that City which lasted from July to October. Continued improvement in general sanitary conditions in the larger factories is:

An Act was considered by which ruers 1928, a maternity benefit scheme by which

the larger factories is An Act was passed by the Central Provinces In Bombay concentral Council in 1930 on the same lines as that in

In their capacities as Additional Inspectors of a month before and a month after confinement I actories with a view to stopping the practice. On other estates materials benefit ranging A Sanitary Inspector was appointed in the from Rs 3 to Rs 5 is paid and in some other Western India Match factory at Triuvottizur estates free feeding of the women for two weeks (Madras) to be in charge of the anti-material before and three weeks after confinement is

Labour Commission's Recommendations

Among the more important recommendations made by the Royal Commission on Indian Labour in connexion with the health of the industrial

- (b) Local authorities should construct sani tary markets in all urban and industrial areas
- (c) Adulteration of Foods Acts should be in, force in all Provinces.
- The Act | (d) In industrial provinces Public Health According Departments should be strengthened to deal
  - Women should be appointed to public health staff particularly in the inore industrialised Provinces
  - (f) Comprehensive Public Health Act should

- Where piped water supplies available special precautions as to purity should be taken
- (h) Every provincial health department, every railway administration and all Boards of Realth and welfare in mining areas should employ full time malariologists
- (1) A Government diploma for health qualification required of all women aspiring to such posts
- (/) In the larger industrial areas Governments local authorities and industrial management, should co-operate in the development of child welfare centres and women's clinics; and Government should give percentage grants for approved schemes

(1) Maternity Benefit legislation on the lines of the Bombay and Central Provinces Acts should be enacted in all Provinces, and

All methods should be explored that may (l) All methods snould be appeared hardships lead to the alleviation of existing hardships

ment of Bombay introduced in the Local she is discharged on account of the closing of the Locality Council on the 11th August 1933 factory in which she is employed.

- are not a Bill to amend the Act. The Bill was referred by should to a select committee on the same day and was passed in 1934 The following changes have been made in the Act .
  - (a) The maximum period for which a woman shall be entitled to benefit is raised from The maximum period for which a woman seven to eight weeks
  - (b) The qualifying period of service is raised from 6 months to 9 months
  - (c) The benefit was payable in three instalments, one at birth of a child and the other two thereafter The Act now provides for payments to be made either in two instalments, one before and the other after child-birth or in one lump sum payment after delivery

(d) There was no time-limit within which the benefit may be claimed The Amending Act prescribes a limit of six months after child-birth

The Select Committee did not agree to the proposed changes in the rate of benefit and deleted the clauses in the Bill relating to this question

Under their rule-making powers under the Act, the Local Government made a new rule in December 1933 which makes an employer Amendment of the Bombay Maternity Act, the Local Government made a new rule Benefit Act—It was represented to Govern- in December 1933 which makes an employer must that the Act requires amendment in certum respects and the Royal Commission of his closing his factory. A woman entitled on Labour have also dealt with the question to maternity benefit is not to be deemed disof maternity benefit Accordingly the Govern- missed within the provisions of Section 8. if

## WELFARE WORK.

## (Excluding Health and Housing).

In 1926, the Government of India requested all Provincial Governments to collect full and comprehensive information with regard to the measures undertaken and the efforts made to ameliorate the conditions under which the workers live when they are not actually employed The enquiry originated as the result of the Recommendation adopted by the Sixth Session of the International Labour Conference in connexion with the development of facilities for the utilisation of workers' spare time The Labour Office of the Govt of Bombay conducted an enquiry in the Bombay Presidency, the results of which were published in the issue of the Labour Gazette for January 1927.

Apart from the few individual employers who have organised welfare work on modern lines, the first organised attempt to introduce welfare activities of a particular type was taken by the Bombay Millowners' Association early in 1930 In a circular letter dated 8th January, 1930, addressed to the mills affiliated to the Bombay Millowners' Association, this Association requested all mills in Bombay City to give their wholehearted co-operation to their efforts for devising machinery for the improvement of the relations between the management and labour by giving immediate effect, wherever it was possible, among other things, to those classes of welfare work which have been uniformly successful, e g, (a) periodical social gatherings of workpeople, (b) provision of free mill dispensaries as soon as financial considerations permit and (c) the establishment of creches at all mills.

There were in 1934 nearly 30 cotton mills in Bombay City which provided creches and in one of these mills the creche was for untouchables Several of the mills which have creches staffed the have creches both qualified-nurses and ayahs Light food such as milk, biscuits, etc is given to the children in 17 cases and in 13 of them change of clothes also is provided for under the new factories Act which came into force from 1st January 1935 it is obligatory on all factories employing more than fifty women workers are ordinarily employed a suitable room shall be provided for the use of to such women Local Governments are empowered to make rules prescribing the standards for such rooms and the nature of the supervision to be exercised over the children therein Only seven working mills have no dispensaries for their working. A few mills keep patent medicines only A large majority of the mills which maintain dispensaries have engaged full-time compounders The E D Sassoon & Company have employed two male doctors and a lady doctor for the benefit of their employees and the company also have a staff for antimalarial propaganda Nearly a third of the total number of the working mills in Bombay provide night schools for the education of their employees. The Sassoons also offer facilities to the workers for technical education. Facilities for recreation of a regular character such as games, wrestling, etc. are provided for by about ten mills Occasional recreational activities like cinemas, dramas

music, etc , are arranged for in a few mills while l in a few others annual social gatherings are hold Ter shops are provided in a good number of mills while cherp grain shops for the benefit of the workers are run by four mills The Sassoon group of mills allow their workmen to make purchases from their cloth shops at 10 per cont discount on credit, recoveries being made from wages The employees of 17 mills enjoy the benefits of provident funds while pension schemes for employees are in force in 9 mills Co-operative credit societies are established in 23 out of the 65 working mills studied

More complete and up-to-date information on all welfare items will be available as a result of a very comprehensive enquity conducted by the Bombay Labour office in 1934 as a part of its General Wage Census programme covering all perennial factories in the Presidency Proper

The Royal Commission on Indian labour have recommended that there should be a more general extension on the part of the employer of nelfare work in its broader sense, and that in the larger jute and cotton industrial areas, mills and factories should organise in groups, each establishment having its own welfare contro and health visitor under the supervision of a woman doctor employed by the group

The All-India Industrial Welfare Conference of 1922 passed a resolution that social service organisations should be asked to take up the work of training welfare workers. The establishments of workers' committees in all industrial establishments was also urged but very little progress appears to have been made so far in this direction

In the Bombay Presidency except in the case of the Sholapur Spinning and Weaving Mills in Sholpur and the Currimbhoy Ebrahim Work-men's Institute at Bombay, no other employers have employed any special welfare officers or workers to conduct their welfare activities But Messes E D Sassoon & Co, Ltd., have appointed a Labour Officer for all their eleven Text.le Mills in Bombay City

In Bihar and Orissa, the Tata Iron and Steel Company has appointed a welfare officer with an office and staff to co-ordinate the various welfare activities that have been carried on by the Steel Company.

In the Central Provinces and Berar, except at the Lmpress Mills, no regular staff of welfare other and workers appears to have been iprointed.

In the United Provinces, the British India Corporation employ a full-time welfare superintendent and a trained staff consisting of 4 doctors, 5 narses, 8 matrons, 8 compounders, about a dozen midwives, 19 teachers and 2 ecreeunt patrols

In Beneral, ritempts have been made by some inte mills to set up day and night schools but many of these schools are reported to have been Shell Factory and the Government Weaving School at Serampore there is little or no organised provision for industrial and vocational training in the industrial centres in Bengal.

The welfare centre inaugurated in Clive Jute Mills made good progress during the year 1933 The Indian Iron and Steel Company, Hirapur, established a Baby Clinic in the charge of a qualified nurse The Burmah Shell Company's labour burcau and welfare department at Budge Budge continued to do excellent work An instance of the progress made is stated to be the success of the night school conducted by the department A number of workmen who attend the school were, until recently, absolutely illiterate but now many of them. are able to fill up money order forms, write out an address, and read a telegram

This company has also employed a full time Labour officer to look after the labour employed in their oil installation in Bombay

In Bombay, the Bombay Municipality has introduced compulsory education in F and G Wards which are chiefly peopled by millhands In the Government factories at Kirkee, the Kirkee Education Society which is well supported b) the factory authorities conducts six night The Gokak Falls Mills Company schools maintains one night school for adult workers In Almedabad one mill runs a school for halftimers and eight mills maintain schools for workers' children Three mills in the Sholapur district and the Government workshop at Dapuri provide for the primary education of halftimers.

The Social Service League, Bombay, maintains several night schools and a Textile Technical School at Parel, for imparting practical and theoretical training to actual mill workers The Bombay Y M C A conducts nearly night schools rith au average dally attendance of about 200 The Ahmedabad Labour Union conducted in 1933, 16 day schools, 10 night schools, one Musery school, one boarding school for boys and one boarding school for guls

In Bihar and Orissa, the Tata Iron and Steel Company has established a Technical Institute at Jamshedpur to train in theory and practice certa a selected students for positions in the operating departments. The Company also maintains over twenty schools for the education of the children of its employees

In Madras, seventy factories registered under the Indian Factories Act have provided schools for half-timers and in some cases for employees' children also. The Buckingham and Carnatic Mills maintain a day as well as a night school The day school is an elementary school with 5 standards and has a technical section attached

In Burma, very few firms provide facilities for education The Burma Oil Company maintains schools in the Yenang-Yaung Oilfield for about 800 children and proposes to start a night school for its employees The Burma Corporation makes an annual donation of Rs 1,000 for the maintaineas of the Angle-Yernagular Alfdle clo-ed owing to the lack of interest shown by the maintenance of the Anglo-Vernacular Aliddle employers. Except for the incilities for technical training that are provided at the Ladwin for the education of the children of Icch-par Rule Pactory, the Cossipore Gun and its employees.

In the United Provinces, the British India | Corporation maintains four day schools for boy, and girls, two night schools and two industrial classes, for employees The Eigin Mills at Cawnpore, the United Agra Mill. Agra and the B N W Railway Workshops at Gorakhpur also provide for the education of the children of their employees—The Elgin Mills have built a perminent stage for dramas and purchased n (incina machine for the entertainment of their workers Messrs Begg Sutherland & Co who are the managing agents for several large concerns carry on welfare activities in providing schools free milk to supply pupils, dispensaries, gymusium and sports, library, recreational programmes, etc

In the Pun; 16, only the new Egerton Woollen Mills Company, Dharwal, maintains a school.

In the Central Provinces and Berar, the Empress Mills in Nagpur have Nursery and primary classes for the children in the creches Puring the verr 1932, 552 children received primary education in factor, schools as against schools for adult labourers.

765 in the previous year, the fall in attendance being due to a general reduction in the number of children employed Créches are attached to six cotton mills and one pottery works in this The educational work outside the mil's is conducted by the Young Men's Christian Association which has established 9 centres where the mill-workers reside Of these, 8 centres have night schools The Empress Mills also make annual contributions of about Rs 3,500 to other schools where the children of the workpeople study

In Assam, some of the tea gardens maintain schools for children, but these schools are not popular as the labourers are generally recruited from the aboriginal tribes with whom education is at a discount particularly as it interferes with the earnings of their children who find employment in the gardens The Assam Oil Company maintains a Middle English School and the Assam Railways and Trading Company provides a Middle English and a Primary School for the children of their employees No industry provides

## Welfare Work on Railways.

Recreation —Rulways as a group are the largest employers of labour in India and their welfare work is therefore being dealt with separately. All Railways provide facilities for separately recreation for their employees and their children The total number of institutes and clubs which have been provided for railway employees and their children amount to nearly 200 for I urop ans and Anglo Indians and over 150 for Indians

Each institute is regarded as a club provided by the Railway free of rent The institutes provide a reading room, indoor and outdoor cames, etc., and are generally self-supporting although grants are made from fines' funds to meet the recurring expenses in deserving cases The railways also undertake to recover the subscriptions of the members through the paysheets and to remit them to the manager of the institute. The membership of the institutes is compulsory on some railways

Sports committees and athletic clubs have con formed on several radways, e.g., the GIP and the East Indian Railways with the object of promoting athletic sports among the employees and organizing tournaments The Indian Railway Athletic Association The Indian Railway Athletic Association formed for the promotion and development of inter-railway athletic competitions of all kinds is a registered association and its membership is open to the Railway Board and its subordinate offices as well as to railways which are parties to the Indian Railway Conference Association Inter-district or inter-divisional competitions are also run by local sports' committees with the idea of encouraging sports among all classes of staff The inter-railway boving, wrestling and football competitions are arranged in four groups. In 1931 the North Western Rulway provided a studium within cast neach of the living Railway employees of the d urrter Moghalpura

The cinema shows and magic lantern lectures which have been recently organized for the recreation of railway employees are growing in popularity with the staff

The East Indian Railway locomotive and carriage and wagon workshops, Lucknow, have Welfare Committees which meet monthly and dispose of matters brought forward by the various delegates Such Committees have also been formed in the Perambur as well as the Golden Bock workshops of the South Indian Railway

Education—Almost all Railways provide facilities for the education of their illiterate staffs as well as for the children of Railway employees The progress made in this direction on each railway may be briefly stated as

The N W. Railway have started three experimental schools for adult workers in the run-ning locomotive sheds at Lahore, Sibsur and Kotri. The experiment has so far been confined to the locomotive staff as the majority of the staff this ın branch are illiterate and education provides a great inducement in that wages can practically be doubled by qualifying for promotion to the higher grades of running staff. The East Indian Railway provide 37 schools for the employees of the Operating Department. The Eastern Bengal Railway provide 9 night schools for adult employees, the daily average attendance of these schools being 300. On the Personal Railway provide 9 night schools for adult employees, the daily average attendance at these schools being 809. On the Burma Railways educational facilities for adult workmen have hitherto proved a failure and another experimental school has recently been opened for firemen.

The B B & C L Railway has recently opened classes for imparting instruction in the three R's at 3 centres on the Broad-Gauge and 3 on the Metre-Gauge systems 3 on the Metre-Gauge systems As an induce-ment to study, a bonus of Rs 5 is paid to each man passing a simple test. On the L. B Rail-

because a number of employers either failed to submit returns or submitted incomplete returns and partly because neither the Central nor the Local Governments were able to provide the staff required for the purpose owing financial stringency. The annual issues Prices and Wages were also suspended in 1923 as a result of retrenchment and no regular official wage statistics are now published for British India as a whole

In the United Provinces a scheme for a census of Industrial Wages to be taken along with the regular census was considered but was not carried through A periodical survey of wages has been carried out every five years since 1912 in the Punjab These surveys deal with the wages of certain classes of workers in three principal towns, in selected villages unaffected by urban conditions, and at certain Railway stations to secure a means of comparison with rural wages in the same neighbourhood Beyond the figures of average monthly wages of certain classes of labour submitted by factories in all Provinces every year for inclusion in the annual Reports on the Administration of the Indian Factories Act, no regular and detailed statistics of industrial wages are available In Madras quinquennial wages censuses have been conducted since 1908 showing the average wages of certain artisans (as well as farm servants em-ployed as agricultural labour) in respect of homogeneous tracts and districts These cenhomogeneous tracts and districts suses, however, only relate to rural and urban wages and not to industrial wages. A thorough investigation of the conditions of labour, and particularly the rates of wages on tea estates in Assam, was made in 1921-22 by a Committee appointed by the Government of that Province The Labour Office of the Government of Bombay conducted three enquiries into the wages of workers in the cotton mills in the Bombay Presidency in 1921, 1923 and 1926 respectively Larly in 1934 there was a considerable agitation among labour ranks in Bombay City for a Goveriment enquiry into alleged large reductions character The Labour office hopes to publish in wage rates in textile mills in the Bombay all the reports covering perennial factories by Presidency, particularly in Mills in Bombay the end of March 1936

City The Government of Bombay decided that the Commissioner of Labour should conduct a Departmental enquiry into wages and uncm-ployment in the Bombay Cotton Textile Industry to and this enquiry covering about a dozen princi-of pal occupations in all Mills in the Presidency was launched in March and the Report of the Enquiry was published in June 1934 The Government of the Central Provinces and Berar conducted a similar enquiry on parallel lines conducted a similar enquiry on parallel links and the report of that enquiry was published in August 1934 Apart from these enquiries the Bombay Labour Office has also conducted enquiries into (1) Wages of peoples in Bombay, (2) Agricultural Wages, (3) Wages of Municipal workers, (4) Clerical Wages in Bombay City and (5) Wages of Printing Press Workers in selected Printing Presses in Bombay City The results of all these enquiries have been published either in the Bombay City The results of all these enquiries have been published either in the form of special Reports or in the "Labour Gazette."

The Government of Bombay have launched , general wage Census which is intended to cover in about two years, all factories, transport workers, workers in docks, municipalities and building trades, etc. The first part of the Cen-sus held for the month of May 1934 covered every perennial factory in the Bombay Presi-dency. The enquiry was conducted on the basis dency The enquiry was conducted on the basis of the muster roll and essential information regarding the number of days worked during a pay period by each worker, his rate of wages and his earnings was called for Seasonal factories his earnings was called for will be covered for one month of intensive working during the winter of 1935-86 and all non-factory industries and organisations will be covered between March and December during the next or the following year To the best of the knowledge of the Labour Office no other country in the world has attempted an enquiry into wages on such a gigantic scale and the results of the Census will be of a far reaching character The Libour office hopes to publish

#### WAGE RATES.

re daily l

Agriculture — Whether wages paid to agri-wages of the three important classes of agri-cultural labour in India have kept pace with cultural labour in rural areas in the Punjab the increase in the cost of living is, for several reasons, a very difficult question to answer. Firstly conditions vary so markedly between province and province that it is almost impossible to obtain accurate and comparable figures sine to optain accurate and comparable figures of wages for different classes of agricultural labour. Secondly there exists a variety of methods adopted for remunerating the workers at the second of memors in different agricultural areas in India For example, in the Punjab, there are four For example, in the same of a purely cash wages, forms of wages, such as (a) purely cash wages, (b) cash wages with supplements which may consist of food, tobation, tobation, tobation, and (a) tobation (c) purely and (a) consist of food, toba-cic' (c) pure the Punjab il mages file as he

will?

.. 16 to 32 annas a day. Carpenters .. 16 to 38 annas a day. Masons Unskilled labourers .. 51 to 161 annas a day

As regards the last occupation it was pointed out that the most frequent wage was between 71 to 81 annas The Labour Office of the Government of Bombay published a Report in 1924 of an Enquiry into Wages in Agriculture which gave the average daily earnings of three classes of agricultural labour, tiz, skilled labour ary labour and field labour = of the Bombay Presi-

e - mrl area# 70 to The

indusidual mills it might apply to any between 1913 and 1918 in which year the first increase of 15 per cent was granted as dearness This was increased to 35 per cent on the 1st January 1919 The next increase granted on 1st I chruary 1920 was 20 per cent extra to male norkers on time rates and to female workers both on time and piece rates, and 40 per cent extra to male operatives on piece rates—the total percentages amounting to 55 and 75 respectively On the 1st November 1920 the 55 per cent was raised to 70 per cent and the 75 per cent to 80 per cent During the vers 1932 and 1933 most of the working Mill- in Bombay reduced wages by effecting cuts There has been no unifor-In these allowances mitv in the matter and although in some mills allowances of 50 per cent or over are granted these allowances in other mills have been reduced to 25 per cent or less. The weighted iverage cut for the whole industry in Bombay amounts to about 18 per cent

As a result of the discussions between the Government of Bombay and the Bombay Millowners' Association which followed the publication of the report of the Departmental Enquiry, the Association decided to recommend to all their members the adoption of consolidated rates for workers on time rates of wages form standard rates were published and these have been adopted by most Mills in Bombay City Individual Mills were, however, permitted to continue the dearness allowances in the case of workers on piece rates of wages but these allowance, were to be increased by five per cent from 1st January 1935 in view of the reduction in Statutory weekly hours from 60 to 54

In the Ahmedabad mills there is a complete lack of uniformity in the methods adopted for calculating the different additions and deductions before arriving at the final earnings dahad, the millowners and the local Labours Union were engaged for over a vear in examining a proposal by the owners to reduce wages by 25 per cent. After protracted discussions the question was referred to a Conciliation Board consisting of Mr Chamaulal Parckh, President of the Ahmedabad Millowners' Association and In subsequent discus-Mr Shaukerlal Banker sions, Mr Manu Subedar replaced Mr as the representative of Labour On the breakdown of these negotiations the whole question was referred to Mr Pathar, late Judge of the Bombay High Court, as an umpire, but in the meanwhile the employers and the workers were able through the mediation of Mr M K. Gandhi at Delhi, to reach a satisfactory agree-ment acceptable to both parties and this agree ment known as the Dellii Agreement was signed by both the parties in the presence of Mr Patkar in Bombay in January 1935 Inter alia, the agreement laid down a uniform cut of 61 per cent in the wages of all workers on both time and piece rates of wages provided that the earnings of two loom weavers should not be reduced below Rs 41-4-0 for 26 working days dardisation of piece rates is to be effected after 1st January 1936 and with a view to provide 1st January 1936 and with a vage questions on average monthly carnings would be for workers either side in future, the parties were to evolve putting in full time, it without remaining askent for automatic adjustment of wages. a scheme for automatic adjustment of nages

The methods of calculating wages in Sholapur are different from those in Bombay and Ahmedabad There are five items which go to make the full wage of an operative These make the full wage of an operative These stems are (1) the basic rate, (2) dearness allowance which is 35 per cent in the case of all female workers and all male time workers and 40 per (3) the number of grace days granted for which payment is made, (4) bonus, and (5) the benefit derived for the grain concession The Sholapur cent in the case of all male piece workers, Millowners decided to reduce wages by 121 per cent with effect from 1st January 1984. The proposal was met by a violent strike which lasted for nearly Three months but the workers were forced to accept the cut

As far as cotton textile workers in the Bombay Presidency are concerned the results of the 1926 census of wages in textile mills in Bombay, Ahmedahad and Sholapur conducted by the Bombay Labour office would, to a certain extent. still hold good if the average of the cuts effected in Bombay (about 20 per cent), Ahmedabad (6) per cent) and Sholapur (12) per cent) are applied The following table gives the average daily earnings for men, women, children and all adults employed in textile mills in the three centres mentioned on this basis -

Centre	Aver	YGE DYIL	EARNING	5 FOR.	
Centre	Men	Women	Children	All adults	
Bombay A h m e da- bad Sholapur .	1	ŧ	ł .	1	

The average monthly earnings of workers in different age and sex groups in the Bombay and Sholapur cotton mills, if worked out on the same basis as in the above table, would be as follows -

Sex and	Average monthly Ear- nings* in				
Age group	Bombay	Sholapur			
Monen Women Children All Adults	Rs a p 30 1 9 14 3 0 26 5 0	Rs a p 20 15 0 8 12 0 5 0 0 20 0 0			

\*Similar figures cannot be worked out for Ahmedabad owing to the admixture of waze payments on the basis of monthly and fortnightly, bi-monthly or 16-day "hapti" payments

The figures in the table give average monthly earnings after allowing for absenteeism interesting however to ascertain what the average monthly earnings of full time workers in textile mills in Bombay, Ahmedabad and Sholapur after applying the cuts effected in the last three years, the figures for Ahmedabad being arrived at by multiplying the average daily earnings by 27.

Average monthly earnings of full time workers in Sex and Age group Ahmeda-Bombay Sholapur. had Rs a п p p 36 36 23 Men 6 0 19 11 0 10 Women 10 0 0 0 8 11 Ó Ġ 20 Children 21 32 8 32 13 All adults 0

The Report of the Departmental enquiry conducted by the Bombay labour office last year into Wage Cuts and Unemployment in the Cotton Textile Industry in all centres in the Bombay Presidency contains a wealth of most valuable information both on wages and the extent of "rationalisation" attempted and effected in this industry during the last few years. The enquiry was conducted on the basis of the sample method and the ten most numerically important occupations which between them cover about 70 per cent of the total number of workpeople employed in the industry were studied. The results are presented for six centres. (1) Bombay City, (2) Ahmedahad centre, (3) other Gujarat centres, (4) Sholapur Centre, (5) Khandesh Centres, and (6) Southern Mahratha Centres. The average daily earnings for the ten occupations studied in these six centres are as follows.—

Occupation.	Bom- bay	Alımed- abad	Gujarat excl Ahmed- abad	Committee	Shola- pur	Khan- desh.	South- ern Mah- ratha
Drawing Tentersmen Slubbing Tentersmen Inter Tentersmen Roving Senters Ring Riders* Tanwalles* Doffers* Two Loom Weavers Winders-Women Reclers-Women	1 2 8 1 3 10 1 3 2 1 2 4 0 14 10 0 13 2 0 10 10 0 11 0 0 11 0	1 3 11 1 5 11 1 3 10 1 0 10 2 0 11 1 14 11 1 0 12	70 7 11 11 10 6	Drawing Tentersmen Slubbing Tentersmen Inter Tentersmen Roving Tenters Roying Tenters Roying Riders* Tarwallas* Doffers* Two Loom Weavers Winders-Women All Workers	0 14 8 0 13 2 0 12 3 0 10 3 0 8 0 0 7 8 1 8 0 0 5	0 13 10 0 13 10 0 13 1 10 11 11 70 10 4 00 8 0 10 6 0 11 4 2 80 7 2	R9 a p   0 11 0   0 13 1   0 12 1   0 12 1   0 12 1   0 11 1 1   0 5 7 2   0 15 3 2 0 6 3 3 0 6 8   0 1 1 1   0 1 1 1   0 1 1 1   0 1 1 1   0 1 1 1   0 1 1 1   0 1 1   0 1 1   0 1 1   0

<sup>\*</sup>In the case of these occupations the averages in most cases are for men only and in some for both men and women workers.

The real wage index number for cotton mill workers in Bombay in April 1934 as compared with July 1926 was approximately 111, for Ahmedabad it was 154 and for Sholapur for February 1934 as compared with July 1926 was 115

The Provincial Annual Reports on the admission of the Factories Act often contains trics, and they are generally collected from a few some figures regarding average monthly and employers. The figures given in the following daily carnings for some of the more numerically important industrial occupations. Such a nominal guide to general wage rates and not figure s are, however, not compiled on any recognised statistical principles. Nor are they based on fixation.

Jute Industry.

The jute industry holds the premier position amongst the industries in the Bengal Presidency; The following table gives the average monthly wages of some important occupations in a jute mill. The figures are not the exact averages of wages of the total number of employees in the industry. They are averages obtained from the actual payments made in some representative mills.

_	<b>.</b>	Average monthly wages.				
Department -	Designation	Multiple shift	Single shift			
	Men	Rsap	Rs a p.			
Roving Machines	Rovers	12 15 0 12 6 0	14 7 0 14 2 0

#### Gms and Presses.

The male cooles in the gin factories in Madras and the Punjab earn on an average annas 8 per day while the female coolies get only as 5-1 and as 6 respectively In the Central Provinces the average daily earnings of male and female coolies are as 10-2 and as 5-10 res-

pectively
The average daily wages of female press cooles
in Madras and the Central Provinces amount
to annas 5-10 while those of male cooles amount
to annas 9-6 and annas 13-10 respectively

The Plantations.—Labour in the tea gardens in Assam is paid on a piece-work basis

In addition' to the standard daily task which the worker must execute in order to earn his wages (called Harra) the labourer is given an opportunity at certain seasons to supplement his earnings by the performance of a second task the payment for which is known as ticca. In some cases where it is impracticable to prescribe a definite task is in leaf plucking at the beginning and the end of the season payment is made by time. A distinctive feature of work in the gardens is that the labourer usually brings his family with him and the wife and sometimes the children are also wage earners. The joint earnings of a family must always be taken into consideration. The average family of a labourer

has been calculated as consisting of one working man, one working woman, about three-tenths of a working child and non-working child and about two-tenths of an adult non-working dependant. The following table gives the average monthly carnings of the labourers in the tea gardens in Assam in March 1933

Periods of Wage Payment—There is a complete absence of uniformity as regards the periods for which payments of wages are made in the various important branches of organised industry in India. In scarcely any industry is there a single period of wage payment. Different systems are found in establishments belonging to the same industry and in the same district and within the same establishment different classes of workers are frequently paid for different classes of workers are frequently paid for different encions. The month, the fortnight and the week are generally the periods of wage payment in Cument and Bick Works, Cotton Ginning and Pressing Factorics. Flour Mills and Engineering Works. Monthly payment of wages is mainly adopted for workers in Printing Presses, Municipalities, Transways and Rulways. In the

Cotton Mill Industry wages are calculated on a monthly basis in all the mills outside Ahmedabad. In the case of the Ahmedabad mills, wages of process operatives are calculated on a fortnightly basis and of workers in the maintenance department on a monthly basis.

In mines, tea gerdens and rice mills the predominant periods of wage payment are a month and a week. In jute mills wages are calculated per week. Wages are calculated on both the monthly and the fortnightly basis in the Iron and Steel Industry, Sugar Mills and in Tanneries. The system of monthly payment appears to be universal in its application to supervisory and clerical staffs engaged in all different industrial establishments, while the most general system in the case of casual labour is of a daily payment of wages

Periods elapsing before payment —The "waiting period" or the time which elapses between the end of the period for which wages are carned and the date of proment varies considerably from industry to industry and from establishment to establishment in the same industry may be generally stated that the longer the wage period the more delayed is the payment of wages Monthly wages are not paid so promptly as fortnightly wages, weekly wages are withheld for still shorter periods and daily wages casual labour are nearly always paid on the day on which they are carned or on the following day. Speaking generally the average period of waiting may be considered to be 10 to 20 days in the case of monthly payments, 5 to 7 days for fortnightly payments, and 2 to 4 days in the case of weekly payments Another factor which affects the period of waiting is the method of payments Whole workers are paid on piece lates, intricate calculations are required to ascertain amount due, and consequently piece rate wages cannot be paid so promptly as wages of workers on fixed time rates of pay. The payment of Wages, Bill under reference to a beleat Committee of the learning terms. of the Legislative Assembly as we go to Press provides that all wages to factors workers for whatever period they may be calculated, must be paid within seven days of the end of the period for which they are due great. Indebtedness very

Indebtedness prevails to a very greatextent' among labourers, but no reliable figures are available except those for the Bombay Presidency which were collected by the Bombay Labour Office during its enquiries into the workers' family budgets for different centres. It om the statistics of the Empress Mills the percentage of labourers indebted appears to be more than 50. Though exact figures for the Punjab are not available it is reported that the volume of indebtedness amongst the agriculturists is greater than anywhere else in India. As regards within and industrial labourers it may safely be assumed that a great majority are in debt to their food suppliers. In Madras the indebtedness of the worker is heavy especially in the case of plantations where it is reported that 75 per cent of the wages of the labourers are taken away on pay days by money lenders. The mine managers of the Jharia coalfields in Bihar and Orist generally put this figure at one week's wages. It is also stated that the extent of indebtedness varies with caste and social custom. In Bombay City, interest on debts

forms nearly three per cent of the total monthly Of the families considered for the Labour Office enquiry no fewer than 47 per cent were in debt The extent of the indebtedness of the family in debt is ordinarily the equivalent of two and a half months' earnings The extremes were 14 months' and one-third of a month's As regards single men, carnings respectively for whom 603 budgets were collected, 45 per cent were in debt, the average expenditure on interest being as 12-3 and the average expenditure on interest for those in debt being Rs 1-11-2 per month Enquiries for the Bombay Port Trust workers showed that over 80 per cent of the families considered were found to be in debt. In the majority of cases the amount of debt varied from a month's income to four months' income In Ahmedabad during 1926 about 69 per cent of the families were in The amount of debt varied from a few rupees to many times the monthly income According to an engulry made by the Labour Office in the year 1925 into the family budgets of cotton mill workers in Sholapur City, 63 per cent of the cotton mill workers' families in Sholipur were in debt, the extent of which varied from less than a month's income to many times the monthly income In 49 per cent of cases, however, a family's debt was equal to between one and four months' of its income

Bonus and Profit Sharing Schemes — "The successful working of a profit sharing scheme pre supposes the realisation by worker of an identity between the various interests engaged in the concern and a conscientious effort on their part to do their best for its maximum success The employers of labour do not feel that labour conditions in India are such as to justify the hope that this high ideal of cooperation will be realised in a substantial in practice" The only solitary concerns in which profit sharing schemes have been tried are the Tata Iron and Steel Company, and in the Buckingham and the Carnatic Mills In 1928 the Tata Iron and Steel Company introduced a scheme under which a monthly bonus based on production is paid to all men drawing less than Rs. 300 per mensem or Rs 10 per day, whose work contributes to the production obtained and who have been in the Company's service for at least six months Buckingham and the Carnatic Mills a bonus is paid to the workmen on a basis relative to the dividend declared

Bonuses are paid for a variety of reasons Some concerns grant bonus for legular attendances and for economical utilization of material In some collieries in Bihar and Orissa a worker loses two thirty ones of Good attendance and is paid a sort of bonus for working six days a not granted in Govern week A bonus is also being granted for raising public utillity concerns

and loading extra tubs. The Tata Iron and Steel Company grant bonuses, (1) for general production, (2) for departmental output, and (3) regular attendance This is paid to all employees drawing less than as 8 per day The Company has also introduced a 'Jack pot scheme' The idea of this scheme is that if 50 men are required to perform certain duties connected with the operation of any unit and the full force is not present, the wages which would have been payable to the absentees are distributed amongst those present

The system of paying bonus in addition to a cash wage either for better work or for better attendance used to obtain in several industrial concerns in the Bombay Presidency especially in cotton textile mills but, except in Ahmedabad where bonuses are paid for better attendance and for better efficiency, the majority of the mills which used to pay such bonuses have either consolidated these bonuses with pay or have abolished them altogether In countries which have no legislation for the control of deductions which may be made from wages on account of fines, the bonus might be regarded as a voluntary gift paid by the employer to the worker who attends regularly without absence or produces work better than specified standards but in countries where 'truck' legislation exists, the bonus easily degenerates into a device whereby an employer tries to get round the Act which lays down percentages of wages beyond which deductions on account of fines shall not be made by dividing the wages into part wages and part bonus In the Ahmedabad textile inilis all weavers who produce 80 to 85 per cent. efficiency on quantity production are paid a bonus of eight annas per loom per fortnight In this centre all damaged cloth is handed over to the weavers and its cost at wholesale price is deducted from their wages. In the case of minor defects the weavers are fined. As the total estimated bonus of the deductions made from the Ahmedabad weavers' wages both on account of fines and damaged material handed over amounts to more than Rs 15 lakhs annually, the efficiency bonus is not so profitable to the worker as it would appear to be The good attendance bonus also operates very harshly in certain cases In one mill in Western India, workers carning Bs 30 or under a month are paid a bonus of 4 annas a week for a complete week's work and a further bonus of eight annas a month for a complete month's work worker loses a day he loses twelve annas and if the day lost be a Saturday preceding a closed day he loses two thirty ones of his monthly wages

Good attendance and efficiency bonuses are not granted in Government, local board and public utility concerns

#### WAGES ON RAILWAYS.

No information more recent to that for the year 1929 is available regarding wages paid on Indian Railways. In that year every-individual system and the Railway Board, in the memoranda of written evidence submitted to the Royal Commission on Indian labour, gave statistics of rates of pay. The following information, therefore relates to the year 1929 but it is understood that all-round reductions have been made on almost all rulway systems during the last two or three years.

Owing to the different types of grades of pay which are prevalent on the Railways it is not possible to give particulars for all of them. Scales of pay of some important classes of railway servants on some principal railways have therefore been set out in the tables below. The limits of pay given in the tables, show the minimum of the lower grade and the maximum attainable the higher grade.

I mount zent to villages—In the absence the Labour Office of the Government of Bombay is a completely urbanized industrial labour collected some information regarding remitters in Irdia, the practice of remitting tance of amounts by workers' families. In Bombay City a large number of workers do not maintain an establishment, but live as boarders and though married keep their dependants of time is available as regards the amounts of time is available as regards the amounts of time is available as regards the amounts of time is available as regards the amounts of time is available as regards the amounts of time is available in the result of the subject were compiled, it of the family income which is Rs 2-1-11 which constitutes 4 23 per cent of the family income which is Rs 20-1-7 on 11 capagood dedimestimating the agrarian per month. In the case of persons living singly in Bombay City, the average monthly

(11 the of Indian industrial vorter. In the singly in Bombay City, the average monthly (11 the Prosince and Bear 80 per cent of remittance comes to Rs. 11-7-1 which constitutes in the front the baned Provinces leave their 36 2 per cent of their monthly income. The the fronthe baned Province leave their 36 2 per cent of their monthly income The terms of their villeges to look after labour force in Ahmedabad is not immigrant to the same extent as in Bombay and therefore their Income than 50 per cent of their labour force in Ahmedabad is not immigrant to the same extent as in Bombay and therefore their Income than 50 per cent of their labour force in Ahmedabad is not immigrant to the same extent as in Bombay and therefore their Income than 50 per cent of their same extent as in Bombay and therefore their from central ladies in the worker's budget. It appears the results and the Bombay in the results and the Bombay in the results and the Lebinary of dependants living away from them. The around the following the families remitting money omes to Re 6-0 per month. Sholapur the results are the labour force from the lamounts ent by Just mill a country from coal mines in the case of the family budget enquiry at that centre only 6 per cent reported that the results are resulted during the family budget enquiry at that centre only 6 per cent reported that the results are resulted during the family budget enquiry at that centre only 6 per cent reported that the results are resulted during the family budget enquiry at that centre only 6 per cent reported that the results are resulted during the family budget enquiry at that centre only 6 per cent reported that the results are resulted during the family budget enquiry at that centre only 6 per cent reported that they had to remit money every month to their armones are resulted by such families comes to result of the armones are resulted by such families comes to require in the worker's budget and the results are resulted by such families comes to require in the results of the armones are resulted by a pulled which are resulted in the results of the armones and for every section is a subject which

Deductions—Deductions from wages on services in the case of in an imploser to his working it a subject which is been engined to the country of including the attention of the Government of India since 1926. In that year, the case of in the case of including ment of India since 1926. In that year, the case of it is a view of the veget received in the community of the case of the veget received in the community of the case of the veget received in the community of the case

The views of the local governments were also recommendations of the Royal Commission on invited on the desirability of taking any action, Indian labour on the subject have already legislative or otherwise to counter any abuses been dealt with elsewhere in this section which might be found to prevail the Labour. Office of the Government of Bombay conducted a very comprehensive enquiry into the subject made several important recommendations in covering all factories, railways, municipalities connexion with the income of transport services, commercial houses shops, workers and the question of their in the form of a special report. As a result of its of the minimum wage Convention adopted investigations that Government came to the conclusion that fining was an abuse grave conclusion that fining was an abuse grave conference, the Commission are of opinion enough to require legislation for its control that the convention, "in referring to trades in and recommended accordingly. The subject which wages are exceptionally low, must be trades as a support argument in 1928-20 by the Bonder. was again examined in 1928-29 by the Bombay Strike Enquiry Committee (The Fawcett are low, not by comparison with western or Committee) in connection with the stand other foreign standards but by comparison ardised rules put up by the employers and the demands put up by the workers during the prolonged general strike in the cotton mills in Bombay City in 1928. The Committee recommended enter alia, that deductions from wages on account of fines should not exceed two per cent of an operative's earnings during a particular pay period. The Millowners' Assocrition, Bombay, accepted this recommendation and it is very noteworthy that almost all textile mills in Bombay which are affihated to the Association have limited their monetary punish-There 14, however, ments within this limit no control on fining in textile mills in Ahmeda-bad In that centre the work of 'cutlooking' or scruting manufactured cloth is often entrusted to contractors who often pay a lump trades should be demarcated and the number sum every year to the mills for this privilege Commissions varying from an annas to twelve annas in the rupce on all fines inflicted is paid portant criteria for consideration should be the by the mill to the contractor. The system cost of enforcement, and a policy of gradualness is also closely linked up with that of handing should not be lost sight of if the investigations over damaged cloth to the worker concerned appear to warrant minimum wage flying over damaged cloth to the worker concerned appear to warrant minimum wage fiving and deducting its value at cost or wholesale in machinery, the necessary legislation for setting price from the worker's wage. The cutlooker up such machinery should be undertaken, also receive commissions on the value of the tangent of the various Provincial Governments deductions in the Ahmedabad cotton mills and the Government of Bombay have already innount to nearly if not more than fifteen laklis indicated a general wage consusts to be completed in about three cases in order to collect all received. of rupees every year. The matter is a grave in about three years in order to collect all possible abuse and a scandal which calls for immediate information on the subject of wages in all legislative action. The action already taken types of industrial concerns in the Bombay by the Government of India in implementing the Presidency.

The Royal Commission on Indian Labour have workers and the question of their indebtedness regarded as having in view trades in which wages with the general trend of wages and wage levels in kindred occupations in the country concerned " If the principle of the minimum wage is to be applied to India, they consider that it would first be necessary to create machinery for fixing minimum rates of wages in those trades in which wages are lowest and where there is no question of collective bargaining The industries indicated for a careful study of conditions are mica, wool cleaning, shellac, bidi degenous cigarette) manufacturing, bidi (the inweaving and tanneries and those in which there is a strong presumption that the conditions warrant detailed investigation Full information re wages and conditions should be collected and if the surveys indicate 'Sweating' the and the composition of wage Boards should be In the setting up of wage boards im-

# COST OF LIVING AND STANDARD OF LIFE,

The publication of a cost of living index with a pre-wai base for the working classes in Bombay City was staited in the Labour Gazette from September 1921 and the scope and method of its compilation are described in the issues of the Labour Gazette for September 1921, September 1923 and April January 1918.

Bombay working class cost of living index numbers by month-(July 1011 = 100).

The Labour Office conducted in the year 1926 an enquiry into working class budgets in Alimedabad and the results of this enquiry have been used in the construction of a cost of living index for that centre. The Alimedabad working class cost of living index number has been compiled on a post-war base and has been

published in the Labour Gazette since January 1930 Items representing food, fuel and lighting, clothing, house rent and infeccioneous groups have been included in the index. The following table gives the index numbers from August 1927 to November 1933—

available regarding the standard of living of the working classes in India The most satisfactory method of obtaining this information is by means of a family budget enquiry in which information is collected regarding the composition, income and expenditure of the family To enable general conclusions to be drawn from investigations of this type it is always necessary to conduct the enquiries by what is known as the extensive method, an attempt being made to secure the information from a large number of families so as to minimise the effect of the peculiarities of exceptional cases The sampling method is often resorted to in conducting extensive family budget enquiries because of the impracticability of collecting data by the consus method. It is essential that the sample -hould be representative in order to yield reliable results

At the Third International Labour Conference of Labour Statisticians held at Geneva in October 1926, the Committee on family budgets passed a resolution that in order to provide adequate information with regard to actual standards of living, enquiries should be conducted generally at intervals of not more than ten years into the income, expenditure and conditions of living of families representative of large homogeneous sections of the population. It was also decided that for a complete enquiry information should be collected as to the district in which the family resides the composition of the household, the manustries and occupations of members of the family the nature of the housing accommodation and the amount of each important item of randly unome and expenditure together with qualities of purchases, where practicable It ration omitting the particulars of the family income would be sufficient where the sole object on the enquiry is to provide weights for the cilculation of cost of living index numbers

Family budgets were collected by the Labour family budget enquiry in Bombay City was above table.

Standard of Life —Very little information is undertaken by the Bombay Labour office in alable regarding the standard of living of the 1932-33. The Report of this engulry has been submitted to Government and will shortly be published Weights based on the results of this enquiry are to be used in compiling a fresh cost of living index number for Bombay on a new base period. The Labour Office collected 985 budgets of working class families in Ahmedabad in 1926 and 1,138 budgets of cotton mill workers in Sholapur in 1925 The reports based on the results of these enquiries were published m 1928 A second family Budget enquiry for Ahmedabad was conducted in 1934 when over a thousand budgets were collected, the figures are in process of tabulation and the report of this enquity will be published early in 1936 A small family Budget investigation for cotton mill workers in Bombay City was also conducted by the Labour Office in 1930 but the results of this investigation have not been published so far

> In the United Provinces a number of budgets were collected at Cawnpore with the object of compiling a cost of living index number the results of the enquiry were not found to be satisfactory and the province has not been compiling any cost of living index number.

Statistics Bureau. Rangoon. The Labour which was established by the Government of Burma in 1926, has made an extensive enquiry into the Standard and cost of living of the working classes in Rangoon and the report based on 4,300 budgets was published in 1928. The results of this enquiry have been separately analysed for Burmese, Telugu, Tamil, Uriya, Hindustani, and Chittagonian workers rate index numbers for each of the different classes of workers have also been published at the end of the report 1,002 budgets for the working class families in Nagpur and 507 budgets for working class families at Jubbulpore were collected between September 1926 and January 1927 for compiling cost of living index numbers (blice for 3,076 working class families in Bombay for these two centres. The figures for the (1) in 1921-22 and the report based on the Nagpur, Jubbulpore and Rangoon Indexes its thereof was published in 1923. A new for the year 1933 have been given in the

# TRADE UNIONS.

lasters of recent vers It was not until 1918 the labour had begun definitely to organise it if Previous to that year very little effort r- to have been made to establish organitime of labour. The earliest association of of I'al as ervants of India and Burmah

The history of trade unionism in India is a for the clerical classes employed in the Bombay Post Offices, a Union of warpers in the Ahmeda-bad cotton mills formed in 1917, the Clerks' Union, Bombay, established in April 1918 in order to organise the various classes of clerkal labour employed in commercial and other offices in Bombay city, and the Madras Labour Union formed in 1918 for the textile workers in which had lace registered under the Indian the three miles in the city of Madras, were the company. Act and its main activities were in main labour organisations in existence at the compaint of and its main activities were in main labour organisations in existence at the contains with the provision of various benefits and of the year 1918. In addition, there existed to its members each as I legal Defence, Sickness certain benevolent social institutions such as the Insurance. It is Assurance, etc. After the Kangar Hitwardhak Sabha and the Social Insurance is tried under it as a Trade Union with the row name of the National Union of Hallward in the row name of the National Union of Hallward in the formal is and Burmalis The composed of workers themselves.

Union, (3) The Corporation Scavengers' Union, (4) The S I Rulway Employees' Union and (5) The Coimbatore Labour Union The Madras Harbour Port Trust Workmen's Union was rouved in 1925-26 A section of the workmen of the Buckingham and Carnatic mills organised a separate Union in 1925-26 called the Buckingham and Carnatic Mills Employees Union, as a rival to the Madras Labour Union which is an old organisation in the same industry. The Cordite Lactory Labour Union, Aruvankadus, came into prominence during 1926-27 were newly formed for the employees of the Public Works Department workshops and the Government Central Press, Madras, while the Doccsan Press Employees' Union which had remained dormant was revived The labourers working in the cotton gluning and factories in Turuppur, Colmbatore started a Union for their benefit Most of the Unions included in their programme a demand for separate representation for Labour in the Legislative Council The Oil Workers' Union and certain other Unions came into prominence only when there was an impending labour dispute There were twenty-nine registered Trade Unions in the Madras Presitwenty-nine dency at the end of March 1934

Railways —Labour Unions are, or have been, operation on ten of the Class I railways, on some of which as many as three or more operate at the same time. Most of them are registered trade unions and the majority have secured some measure of recognition from the respective railway administrations. Many railway trade unions came into existence during the period 1918-1921 but several of them were short-lived Those unions which have managed to survive actively looking after the interests of their members and show signs of improved organisation and usefulness especially in those where union committees are not dominated by persons with a communistic bent of mind. A noteworthy feature is that there is an increasing tendency in many railway railway unions to look for office-bearers and leaders from amongst members who are actually engaged in railway work. There can be no doubt that, within the last few years, the appointment of establishment and employment officers and special attention to welfare of railway labour have been due largely to trade union propaganda.

The following is a list of such All-India Federations of Trade Unions or All-India associations of workers for which some information is available

The All-India Railwaymen's Federation—
Though not a registered body under the Indian Trade Unions Act, this Federation has been taking an active part in collective bargaining with railway authorities. Having affiliated to it about twelve unions of men working on all but two of Class I railways and with a membership of nearly 1,00,000, it has been able to everuse considerable influence with the Railway Board and arrangements have been made for half-yearly conferences iffecting wages and conditions of service of railway employees as a whole. The federation with the Board for the discussion of matters if taking continuous interest in bringing railway employees closer together and securing greater.

All-India Trade Union Congress was organised and the first session of the Congress was held in Bombay on the 31st October 1920 Eight hundred delegates from different parts of India and 42 others expressed their sympathy with the Congress It became a central organisation of the trade union movement in India but from the beginning it had a strong political colour list presidents and secretaries have all been politicians first and labour leaders next, with the exception of a few persons like Nr N M Joshi The Congress appointed railway employees as a whole The federation in the first session of the Congress was held in Bombay on the 31st October 1920 Eight hundred delegates from different parts of India and 42 others expressed their sympathy with the Congress It became a central organisation of the first session of the Congress was held in the Bombay on the 31st October 1920 Eight hundred delegates from different parts of India and 42 others expressed their sympathy with the Congress It became a central organisation of the first expressed their sympathy with the Congress and 42 others expressed their sympathy with the Congress and 42 others expressed their sympathy with the Congress and 42 others expressed their sympathy with the Congress and 42 others expressed their sympathy with the Congress and 42 others expressed their

unity in the trade union movement in the country. At the last annual convention the Federation devoted special attention to the question of reinstatement of retrenched staff, wage-cute, the proposed statutory Railway Board, etc.

The National Union of Railwaymen of India, Burma and Bombay —This Union was started by the Amalgamated Society of Railway Servants of India and Burma which came into existence as a sequel to the Great Indian Peninsula Railway Guards' strike in 1897. It was at first registered under the Indian Companies Act, but after the Indian Trade Unions Act came into being, it altered its name, redrafted its constitution and registered as a Trade Union It has a membership of about 4,575. It provides for its members various voluntary and other benefits such as death suckness, unemployment unions in India which maintains a political fund.

The All-India and Burmah Covenanted Non-Gazetted Railway Services Association—This Association, whose membership is limited to covenanted Europeans employed as foremen in railway workshops in India, was started in October 1926 with the object of securing for its members the, benefits of the Lee Commission's recommendations. It submitted a memorial to the Viceroy on this question in November 1926. It has a membership of about 300 employees scattered all over India and it originally had its Head Office in Bombay The Association registered with the Registrar of Trade Unions, Bombay Presidency, in March 1928, but transferred its Head Office to Punjab in 1929 and again to Madras during the year 1932-33

The All-India Trade Union Congress— This organisation was inaugurated in 1920 for two main purposes (1) to co ordinate the activities of the individual Labour Unions in India which till then remained incohate and were unable to take concerted action and (2) to recommend workers' delegates to the International Labour Conferences When the International Labour Conferences When the Government of India had to select a Labour representative to attend the Washington Conference in 1910, there was no representative body of labour in India to be consulted and they therefore appointed Mr N M Joshi as the Workers' Delegate In order, therefore, that responsible Labour opinion in India might have a voice in the selection of the delegates to the International Labour Conferences, the All-India Trade Union Congress was organised and the first session of the Congress was held in Bombay on the 31st October 1920 Eight hundred delegates from different parts of India were present and sixty Unions were affiliated and 42 others expressed their sympathy with the Congress It became a central organisation of the trade union movement in India but from the beginning it had a strong political colour Its presidents and secretaries have all been politicians first and labour leaders next,

Madias on July 16 and 17, 1932, with Mr V V<sub>z</sub> Giri as President The Federation claimed the allegimee of 40 unions in various parts of the country including Native States and a total membership of 78,000 The Conference adopted the provisional constitution of the Federation framed by the Committee of management and also considered the question of trade union units.

Almost from the time of the unfortunate sulit which occurred at Nagpur in 1929, the necessity of bringing about trade union unity has been felt in almost every quarter have been made since 1930 to bring the different groups together informally and to try to find a reasonable basis of agreement Some Bombay unions formed a 'platform of unity' the main planks of which were (1) that the Trade Union is an organ of class struggle involving purely direct action , (2) that the Trade Union Congress should not be affiliated to the International l'ederation of Trade Unions, Amsterdam, and (3) that delegates should not be sent to the International Labour Conferences In these efforts the railway unions which had remained aloof from the two rival national organisations took very great interest and the All-India Railwaymen's Federation convened in Bombay a representative conference in May 1931, when a committee was appointed for the purpose of considering and reporting upon the best methods of bringing about unity in the ranks of Indian labour. The platform of unity referred to was particularly examined by this committee whose suggestions for amendments were not approved by the extremist labour leaders belonging to the All-India Trade Union Congress The All-India Trade Union Federation at its first session held in Madras however welcomed the efforts made by the Trade Union Unity Conference held under the auspices of the All-India Railwaymen's Federation and authorised its norking committee to co-operate with other unions in facilitating the reconciliation differing points of view A special session of the All-India Trades Union Federation was held at Calcutta in April 1933 for the purpose of considering the question of Trade Union unity amongst other subjects, and a resolution was passed authorising the General Council to negotiate with the Provisional Committee of the National Federation of Labour (a new national trade union organisation formed by certain leaders of labour) on the question of trade union unity with a view to bring about amalgamation between the two organisations on a fair and equitable basis As a result of these negotiations, the National Trades Union Federation came into existence on and from 10th May 1933 m place of the All-India Trades Union Federation and the National Federation of Labour.

The main objects of this Federation are (a) to establish a socialist State in India, (b) to socialise and nationalise the means of production, distribution and exchange as far as possible, (c) to ameliorate the economic and social conditions of the working classes, and (d) to support and actively participate in the struggle for India's political freedom from the point of view of the working classes by all legitimate, peaceful and democratic methods such as legis-

Intion, negotiation, propaganda, etc., and, in the last resort, by strikes and similar other methods. Each affihated union has to pay to the Federation an annual fee of Rs 20 for 2,000 members and below, Rs 10 for every additional 1,000 members or less upto 10,000 and Rs 5 for every additional 1,000 members or less above 10,000

The first session of the National Trades Union Federation was held in Bombay on the 24th to 26th Dec 1933 with Mr Mrinal Kanti Bose, the President of the Federation, in the chair The number of unions affiliated to the Federation was reported at 50 and the total membership of individual members at 1,37,000 It was resolved to organise an All-India Textile Lybour Federation to resist the employers' attacks on the workers in the textile industry, and to provisionally affiliate the National Trades Union Federation with the International Federation of Trade Unions for a period of two years in the first instance

There was a split in the Federation at its first session held in Bombay The representatatives of several Bengal Unions walked out of the conference on the 26th December 1933 in consequence of differences of opinion between them and Mr N M Joshi and held a meeting on the same day under the presidency Mr Abdul Gham and resolved to form an All-India Federation of labour with the name and style of the All-India Trades Union Federation Calcutta Mr M Daud, was elected President with headquarters at Calcutta Bar at-Law, It was proposed to draft a constitution and place it for adoption before the next session to be convened at an early date Six unions, all situated in Bengal, with a total membership of 15,000 promised affiliation to the new body

There are, in addition, the following All-India Associations in existence —

(1) The All-India Postal and R M S Association, (2) The All-India Postmen's and Lower-Grade Staff Union, (3) The All-India Telegraph Union, (4) The All-India Post and Telegraph Administrative Offices Staff Association (5) The All-India Government Employees' Federation, (6) The All-India Currency Association, (7) The Central Body Military Accounts Association and (8) The National Federation of Textile Labour in India

#### Trade Union Legislation

In 1920 a Company owning a mill whose workers were on strike brought a suit against the leader of the local labour union which was conducting the strike and others, seeking to restrain them from inducing the plaintiffs workmen to break their contracts, and suing for damages for their actions in this respect. The Madras High Court to whom the suit was referred gove their decision granting an interim injunction restraining the defendants from inciting the plaintiffs' employees to continue the strike. The case was eventually withdrawn but the proceedings suggested that, in the absence of legislation, even legitimate trade union activity was aftended by considerable peril. As a result of a resolution moved by Mr. N. M. Joshi and accepted by the Legislative Assembly in March

#### INDUSTRIAL DISPUTES.

came into prominence in India during the period immediately following the close of the War when the majority of the strikes as shown in the introductory Section were designed to secure increases in wages commensurate with the rise in the cost of living The epidemic of industrial strikes which characterised the period 1919-20 reached a climax in the winter of 1921 During this period strikes took place purely from economic causes and most of them ended successfully from the view-point of the workers, after 1920 by the Government of Ind a short struggle After this period, however, ment of Industries and Labour

The weapon of the "strike" in industry first; they tended to be more prolonged and less successful and, partly owing to political causes, there were a number of fairly serious disputes in public utility services — In more recent years the machinations of the Communists have been increasingly responsible for the calling of general strikes and their undue prolongation

> Extent of Disputes -All-India statistics of industrial disputes for each quarter and for each year have been compiled and published since 1920 by the Government of India in the Depart-

The following tables show the number of disputes which occurred during the nine years 1005-33 in each province and in each class of industry respectively -

Bonus Dispute Enquiry Committee —The next Committee to be appointed by the Government of Bombay was the Committee of Enquiry with Sir Norman Macleod, as Chairman to enquire into the general strike of the Bombay cotton mill workers of the year 1924 in connexion with the non-payment of an annual bonus for the year 1923 by the Bombay mills

The findings of the Committee were -

- That the mill workers had not established any enforceable claim, customary, legal or equitable, to the annual payment of a bonus, and
- (2) that the results of the working of the mill industry as a whole for the year 1923 were such as to justify the contention of the millowners that the profits did not admit of the payment of a bonus

Bombay Strike Enquiry Committee—The third ad hoc Committee to be appointed in the Bombay Presidency was the Bombay Strike Inquiry Committee under the Chairmanship or Sir Charles Fawcett, Judge of the Bombay High Court, in connection with the general strike of the cotton mill workers in Bombay city of the year 1928 in pursuance of the agreement arrived at between the Bombay Millowners' Association and the Toint Strike Committee at a conference held under the Chairmanship of the Hon Sir Ghulam Hussain Hidayatullah, General Member of the Government of Bombay, on the 4th October 1928

This Committee sat for a continuous period of five and a half months and its Report was published on the 26th March 1929

Some of the conclusions and recommendations of the Bombay Strike Enquiry Committee were as follows —

- (1) The proposals of the Millowners' Association (a) for standardization of wages duties and numbers of operatives in a mill and (b) for Standing Orders for the operatives about the conditions of their employment were in the main fair and reasonable
- (2) While there was justification for the Association's proposal to make a cut of 7½ percent in weavers' wages, there were reasonable objections to be urged against its adoption in the present circumstances and it was recommended that it should be dropped by the Association provided the Labour leaders undertook to co-operate in working the scheme for the standardization of wages
- (8) That part of the standardization scheme which is called the "Rational" or "Efficiency" system and which aims at reducing the number of operatives employed in mills while raising their wages and providing conditions favourable for the extra efficiency expected from the operatives was fair and reasonable
- (4) With regard to the Seventeen Demands submitted by the Joint Strike Committee some of the demands which were considered to be fair and reasonable were—

- (a) That the Millowners shall not vary any of the present conditions to the disadvantage of the workers before securing the approval of the workers through their organisations
- (b) That the Millowners' Association shall not permit its individual members to vary the conditions of service to the disadvantage of the workers without the sanction of the Association.
- (c) The rates of new varieties shall be fixed by the Millowners' Association in consultation with the representatives of the Workers' organisations
- (d) Notices in vernacular showing the rates of piece work in detail should be posted in the Departments for the information of the workers
- (e) That there should be no victimisation of men who had taken part in the strike or any Union activities
- Most of the above were eventually conceded by the Millowners' Assodiation
- (5) The following demands were held to be unfair and unreasonable—
  - (a) The wages of those workers whose average monthly wage is less than Rs 30 should be raised substantially
  - (b) The newly introduced system of compelling the workmen (1) to take out and present tickets of attendance and (2) to clean machinery daily should be discontinued
- (6) The recommendations of the Committee for alleviating unemployment consequent on the introduction of efficiency methods of work were as follows —
  - (a) The millowners should set up some machinery for taking note of all cases where workers are discharged on account of reduction of staff, and help them as far as possible to get suitable employment either in some other mill or in some other industry
  - (b) The Millowners' Association should consider the advisability of a scheme for the payment of a gratuity to a worker, which may amount to say, four weeks or six weeks' wages according to his length of service payable in suitable cases to discharged employees who may need help during the waiting period while they are seeking employment. The formation of an Out-of-Work Donation Fund on a voluntary basis to be created by a system of setting aside a contribution by the Millowners of one anna per operative per month to which fund the operatives through their representatives should be invited to contribute one anna or at least half an anna per head per month was suggested

- arrange for the assistance of an expert technical advisor in dealing with disputes arising under the Standardisation Scheme
- (8) In view of the fact that several matters required adjustment in connexion with the scheme for wage standardisation after at had been brought into operation and with a view to avoiding strikes and lockouts, machinery was provided by "Mediation Rules" agreed to by both sides for setting up joint Committees to enquire into disputes arising under the scheme and to endeavour to arrange for their settlement.

Owing to the undue prolongation of the general strike in the Bombay Cotton Mills of the year 1929 and the consequent disruption of labour, it was not possible for the Bombry Millowners' Association to bring into operation the Mediation Rules recommended by the Bombay Strike Enquiry Committee for the simple reason that there are no recognised Unions representatives of Bombay Cotton Mill workers in the City. The Bombay Textile Labour Union, of which Mr N. M Joshi, M L A , is the President had barely 400 members. The recognition accorded by the Bombay Millowners' Association to the Bombay Girni Kamgır Union which claimed a membership of over fifty thousand after its registration in May 1928 was withdrawn by the Association by the Association on the publication of the reports of the Court of Enquiry appointed under the Trade Disputes Act to inquire into questions connected with the general strike of the year 1929 and the Riots Inquiry Committee The Association has been giving anxious con-sideration to the practical steps which might be taken by mills to bring about better relations between employers and their workmen and for the prevention of accumulation of grievances In a circular letter dated the 8th January 1930 addressed by the Association to all the mills affiliated to it, they issued instructions that all mills should take immediate steps whereby complaints and grievances of the workers may be attended to by the management con-cerned at once. For this purpose complaint boxes were to be placed in the compounds of all mills in which workers are invited to put in petitions regarding their grievances or sugges-tions for improvement of conditions of work The milis have been requested to give sympathetic consideration to any complaints or suggestions made and to redress or give effect to them wherever possible. Further measures calculated to the property of the superior of improve the relations between employers and the employed are under considera-Association have also measures for joint discussions between managers of mills and the Association on general questions relating to the internal administration of the mills

The next Committee to be appointed in the Bombay Presidency was a Court of Enquiry appointed under the Trade Disputes Act in connexion with the general strike of cotton mill operatives in Bombay City of 1929. After a prolonged enquiry into the causes of and the conduct of this strike which lasted for nearly

The Trade Unions should combine to | four months, the Pearson Court of Enquiry came to the unanimous conclusion that the whole of the blame for the calling and the continuation of the strile rested with the Bombay Giral Kampar Union. The Report of the Court was published on the 16th Sept and its moral effect was so great that the union called off the strike unconditionally on the next das

> Perhaps the most comprehensive enquiry undertaken in India into wazes and conditions of labour was the Depirtmental Laquiry conducted by the Commissioner of Labour (Mr. T. L. Gennings, CHT. Barrister-at-Law) and the of Bombey Into Vage Cuts and Unemployment in the Cotton Textile Industry in the Bombey Presidence in 1934. The Assistant Commissioner of Labour and the Labour Officer at Ahmedahud together with statistical assistants of the Tabour office visited every cotton Mills in the Presidency and procured full information on wages and on the terms of reference which are reproduced below with the Departmental findings -

- 1. The extent of the reduction in mages of work people employed in the cotton Millin the Bombiy Presidency since 1st January 1926
  - Findings -- Wages in Bombay City were lower by 21 per cent in April 1934 as compared with July 1926, and in Sholypur reductions amounted to 17 per cent. Wages in Ahmedabad had risen between five to ely per cent during the same nuriod
- 2. Whether the reductions have been uniform in the cotton Mills at each centre of the andustry
  - Findings -The reduction in Sholapur was uniform in all Mills but as the Bombay Millowner's Association permitted its members to take independent action as they pleased the extent of the cuts varied widely as between Mill and Mill
- 3 Whether the cost of living of the working classes has fallen during this period and to what extent
  - Findings—Cost of living has fallen in all centres—Taking July 1026 as 100 it fell by 29 points in Bombay City in April 1034—In Ahmedabad the fall in December 1933 as compared with August 1026 was 31 per cent and in Sholapur there was a fall of 28 per cent, between Telephary 1027 and December between Tebruery 1927 and December 1933.
- 4. What has been the average rise or fall in real wages during this period in the various centres of the industry
  - Findings —Bombay, April 1934 eleven per cent higher Ahmedabad 54 per cent. higher and in Sholapur 15 per cent higher.

5 Where wage reductions have been effected or are contemplated, the reasons, therefor

Finding—The reason most generally given Other reasons was trade depression varied with the centres. In Bombay it was stated that it was necessary to reduce the cost of production, and labour cost were those most capable of reduction as the fall in the cost of living would enable the workers to maintain the standard of life they had in 1926 even after wages were reduced. As regards Ahmedabad there was no general reduction of wages at the time but such a reduction was contemplated owing to diminished profits and the wage reductions in other centres In one centre wages were reduced owing to the probable coming into operation of the 54 hour week

6 The extent to which Rationalisation for example, efficiency schemes have been introduced in the Cotton Mills of the Bombay Presidency and the effects which such schemes have had upon wages and the conditions of work of the operatives

Findings —That method of rationalisation which takes the from of asking operatives to mind more machines than formerly has made the greatest progress in Bombay City In Ahmedabad rationalisation has been particularly directed towards improving the efficiency and types of The effect of ratiomachines used on earnings values where li In the few cases where nalisation Mill to Mill rationalisation had not been accompanied by wage cuts, the workers were getting about 50 per cent more than they did before rationalisation was introduced, where it was accompanied by wage cuts the workers were not getting any The extra rates for minding more machines being neutralised by reductions in wages The effects of rationalisation on the conditions of work have been beneficial because the workers were either working a shorter day or their work had been rendered In Bombay a form of rationalisation is to ask a weaver to mind four looms instead of two. In Ahmedabad the system had not been adopted but double-side working in the frame Department was developing Where operatives are minding more machines than formerly The workers have usually been given 35 to 60 per cent more wages in ring spinning and 50 to 75 per cent more on the speed frame. But some benefit from the increased efficiency of the plant had been passed on to some workers in the form of higher earnings on those machines. There has been on those machines very little rationalisation in Mills outside Bombay and Ahmedabad

7 What is the extent of unemployment in the cotton Mill industry and what are its causes.

Fundings —For lack of any agency official or non-official for collecting statistics of unemployment it was very difficult to formulate an answer to this question 28,000 workers had lost their employment in cotton Mills in Bombay City (The opening of closed Mills and the employment of workers on night shift had, however, more than absorbed this number by the end of the year) In Ahmedabad 26,551 more operatives were employed than in 1926 and in Sholapur the number employed was more or less stationary

Few Government reports have received a more universal or widespread welcome in India and the report of the Departmental enquiry formed the subject of leaders and articles in all sections of the Press in India five weeks after its publication. The most important result of the Report was the passing by the Government of Bombay of a Trade Disputes Conciliation. Act appointing the Commissioner of labours as ex-officio Chief Conciliator and the appointment of a senior Member of the Indian Givil Service (Mr. W. B. Gilligan) as a Labour Officer to look after the interests of Cotton Mill workers in Bombay City, to represent their grievances to their employers and to procure redress of such grievances whenever and wherever possible.

A development of the greatest possible importance in the field of industrial Conciliation and arbitration in India occurred early this year when the Commissioners of Labour of the Government of Bombay offered his services as Conciliator to the Western India Match Co during a dispute which occurred during January 1935 between the Company and its workmen at their Ambernath factory over question connected mainly with reductions in wages .Mr I F Gennings, CBE, Commissioner of Labour, and Mr S R Deshpande, Assistant Commissioner of Labour were able to secure an agreement between the two parties on the basis of which work was resumed after a strike lasting for a month Subsequent to restarting work there was a further disagreement between the employers and the workers on the new piece rates and these were referred to the Commissioner of Labour for arbitration

Bengal—Several special Committees were appointed by the Government of Bengal during the period of intense industrial unrest during the years 1920-21

As the result of a strike of taxi-drivers and professional drivers of private cars in Cal-cutta which was caused by objections to certain rules, particularly (a) a new rule requiring medical examination of applicants for professional driver's license, and (b) another rule forbidding the carrying of attendants in taxis, Government appointed a Committee of Enquiry into the exist-ing licensing regulations and the control of taxi-cabs generally. The strike lasted from the cabs generally 12th to the 20th January 1921, and ceased as result of the institution of the inquiry Committee made a number of proposals for regulations amendments in the existing were ultimately accepted These proposals were ultimately accepted and brought into effect on the 12th October 1921

- As the result of a strike of drivers and conductors of Calcutta and Howrah tramways, which lasted from the 27th January to the 24th February 1921, Government a Committee of Enquiry after the resumption of work by the strikers on the 8th March 1921 The men resumed work towards the end of February on condition (a) that the Calcutt Tramways Company would investigate their grievances and announce their decision within a week, and (b) that if the men were dissibiled the Company's decision, Government would appoint a Committee of Linquiry was general agreement between the Company and the men's representatives in regard to the majority of the Committee's recommendations Some, however, of the Directors of the Company did not accept the terms of the tramway employed Another employees of a much more protracted character broke out in 1922 lasted from 20th 1922 to December 27th January 1923 No Committee of Enquiry was appointed, although the represent thises of the mon raised several points which arose from the previous inquiry Work was resumed unconditionally
- (3) During a strike on the light railway of Messrs Martin and Company in the 21 Parganas and Howah which lasted from the 15th June to the 2nd July 1921, a special Conciliation Board was constituted by Government by a special resolution at the joint request of the employers and the employees concerned. The result of the Board's efforts was a compromise on most of the points raised by the workers, and as a result of the Board's recommendations it was agreed that joint works committees should be set up on the Howah-Amta and Howah-Sheakhala lines. Works Committees were established soon after the Board's report was published, but they failed to function owing to the mea's indifference.

(4) The Bengal Legislative Council passed a resolution on the 4th March 1921 to the effect that Government should appoint a Committee to enquire into the general causes of the prevailing unrest and to suggest remedial measures. The report of the Committee was published on the 18th June 1921 The main recommendations of the Committee were—

- (a) the citablishment of joint works committees in industrial concerns;
- (b) non-intervention of Government in private industrial disputes, which it was considered should be settled by voluntary conciliation,
- (c) the constitution by Government of a conciliation panel to deal with disputes in public utility services, and
- (d) the appointment by Government of special conciliation bodies in the case of private industrial disputes, if both parties desired outside intervention

As the result of the recommendations of this Committee, a conciliation panel was constituted under Government resolution dated the 20th August 1021. The panel contained thirty names, and was composed on a representative basis, leading public bodies being asked to recommend persons to serve on it. The panel was reconstituted every very till 1029, when it was superseded by the Trule Disputes. Act. Several applications for Government Intervention were received during the period of the panel's existence but in no case did foovernment consider that intervention was Justified.

The Government of Bengul agreed with the Committee's view that there was no reason voluntary conciliation bourds, constituted, should not achieve a large measure of success in labour disputes affecting public utility services, where the parties had come to a deadlock, and a solution of the disputes could only be found in the intersention of outsiders The panel was intended to deal only with disputes affecting public utility services in Calcutta and its neighbourhood. In the settlement of ordinary labour disputes not directly affecting the public, the Committee held that it was not ordinarily the duty of Government to intersence in such disputes either directly or indirectly but if both parties express a desire that their differ ences should be investigated by an impartial authority, the Governor in Council should be prepared to establish a conciliation board to deal with the matter, or to take such other action as might be suitable in the circumstances of the case

## TRADE DISPUTES LEGISLATION.

The history of the various proposals for legislation providing machinery for the prevention and settlement of industrial disputes in India covers a period of about ten years. The findings of the Industrial Disputes Committee appointed by the Government of Bombay in the year 1921 in pursuance of a Resolution moved in the Bombay Legislative Council for the appointment of a Committee "to consider and report on the practicability or otherwise of creating machinery for the prevention and early settlement of industrial disputes" has already been dealt with above. Mention has also been made of the action taken by the Government of Bombay under circumstances which led to its abandonment owing to the Government of India circularising a draft Bill as an All-India measure. The Bill circulated by the Government of India in August 1924 was very wide and comprehensive in scope and extent.

Nothing further was heard about this Bill until the end of 1925 when His Excellency the Viceroy in a speech at the Annual Aleeting of the Associated Chambers of Commerce of India and Ceylon, at Calcutta, said "The question of providing means of concilation of trade disputes has been thoroughly explored but it would be premature to legislate on this question until the Trade Union Bill has become law." The Trade Unions Act was passed in the Legislative Assembly in Alarch 1926 and was brought into operation with effect from the 1st June 1927

In August 1928 the Government of India published their second Bill making provision for the investigation and settlement of trade disputes and for certain other purposes. This Bill was introduced in the Legislative Assembly with a motion for circulation on the 21st

September 1928 The Bill differed in several important respects in comparison with the Government of India's original Bill of 1924 The main part of the Bill falls into three parts Clauses 3 to 14 of the 1928 Bill related to the establishment of tribunals for the investigation This part of and settlement of trade disputes the Bill was based generally on the Industrial Courts Act of 1919 and its detailed provisions were adopted for the most part from clauses in that Act. The main difference was that, whereas the British Act sets up a Standing Industrial Court, the Conciliation Boards which the Bill proposed to establish were intended to be appointed ad hoc like the Courts of Inquiry, in order to deal with particular disputes The object or Courts of Inquiry which would ordinarily be composed of persons having no direct interest in the disputes would be to investigate and report on such questions connected with the dispute as might be referred to them. The objects of Boards of Conculstion which would ordinarily include representatives of the parties to a dispute would be to secure a settlement of the dispute Provisions were made so as to enable both Courts of Inquiry and Boards of Conciliation to enforce the attendance of Conciliation to enforce the witnesses and the production of documents Neither party would be under any obligation to accept the finding of the Court or the advice of the Board , and in cases where the dispute is not brought to an end during the deliberations of the tribunal that had been appointed, reliance was to be placed on the force of public opinion which would be enabled by the publication of the report of the tribunal to arrive at just conclusions on the merits of the dispute

The second part of the Bill consisted of clause 15 which related to public utility services. In accordance with the definition of "Public Utility Services" in clause 2 of the Bill, Clause 15 would be applicable to such railway services as would be notified by the Governor-General in Council The clause made it a penal offence for workers employed on monthly wages in public utility services to strike without previous notice and also provided heavy penalties for persons abetting such an offence. The clause was based on the principle that persons whose work was vital to the welfare of the community generally should not be entitled to enter into a strike before sufficient time had been given to examine the merits of their grievances and to explore the possibilities of arriving at a possible settlement. Provisions of a somewhat similar type already exist in the Indian Post Offices Act, in a number of Municipal Acts in India, and the principle is one which is widely accepted in other countries.

Clauses 16 to 20 of the Bill contained certain special provisions relating to illegal strikes and lockouts. These clauses followed closely the provisions of sections 1, 2 and 7 of the British Trade Disputes and Trade Unions Act 1927. They were to be applicable only in the case of the strikes and lockouts which satisfied both of two conditions in the first place, the strike or lockout must have other objects than the mere furtherance of a trade dispute within the industry to which the strikers or employers belonged, and, in the second place, the strike or lockout must be designed to coerce Govern-

ment either directly or by inflicting hardship on the community. If these conditions were satisfied, the strike or lockout would become illegal. Persons furthering the strike or lockout were liable to punishment and would be deprived of the protection granted to them by the Indian Trade Unions Act, while persons refusing to take part in it would be protected from Trade Union disabilities to which they might otherwise be subjected

The motion for circulation was adopted in the Legislative Assembly and the Bill was circulated to all Local Governments for opinion Some Provincial Governments recommended that questions connected with picketing and intimidation of the type which were entirely responsible for the undue prolongation of the general strikes in the cotton mills of Bombay City of the years 1928 and 1929 and the rioting in Bombay in the year 1929, should also be covered The Bill was referred to a Select Committee of the Legislative Assembly in February 1929.

The Select Committee decided to limit the duration of the Act to five years In connection with the definition of the term "Public Utility Services" they were of the opinion that the wide power enabling the Government to declare any industry, business or undertaking to be a public utility service was undesirable as well as unnecessary and the provision made for this in the draft Bill was omitted Various proposals designed to lay upon the Government a definite obligation to convene a Court of Inquiry or a Board of Conciliation in cases where one of the parties so required were considered Committee thought that unless both parties were agreed in desiring a reference it would be useless to fetter the discretion of the Government as to the time at which the matter was At the same reported for action under clause 3 time they held that no option should be left to the Government to refuse to appoint a Court or Board where the Government was assured that both parties were agreed as to the necessity as well as to the form which it should take therefore considered it necessary to provide that in every case a Court of Inquiry, where it consisted of one or more persons, should not include persons having an interest in the dispute or in any industry affected by it, and in this connection the Committee proposed a further definition of the term "An independent person" The clause relating to the publication of the findings of Courts and Boards was maintained on the lines of the English Act so as to make it quite clear that every report of a Court or Board, whether final or interim, must be published, and that only the publication of such information or evidence as the appointing authority thought fit should be left to its discretion It was considered inadvisable to forbid the representation of parties before Courts and Boards by legal practitioners subject only to exceptions and they redrafted the clause in such a manner as to permit that such representation would ordinarily be permissible subject, however, to such conditions and restrictions as might be provided by the rules

The Select Committee accepted the principle underlying the clause in connection with strikes in public utility services but they held that the clause as originally drafted was open to certain criticisms. For example, it was pointed out that

particular individual on a further that the clause vas one-sided and influed no penalty upon an employer who locks out his vortern. The latter point was considered as one which should certainly be met as be the nature of his employment a casual or dar to-da; labourer must be entitled to cesse work at any moment and be similarly liable to di-mi-ral and it was agreed . Di-pries that he should therefore be excluded altogether from the operation of this clause Committee adopted a suggestion made by the Government of Bornes, which made it clear that the census of of work must be in the nature of a strile as defined in the Bill and it was provided that in order to render it a penal offence thestrile must be in breath of a definite contract bitreep the employer and the morlimen committee added a collateral provition penalising an employer for locking out his working in breach of any contract. The Committee adopted the clause in connection with illicial stal et but with come amendments when in their opinion, rould restrict it= scopt rithout muchally impairing its effectiveners. In sub-clause 2 of this section the made it clear that, for the application of money to be theral it must not merely tend to further or support the stule, but hare the direct effect of so doing This was intended to evolude a case in which more is spent upon the relief of the dependents of erd are A turther sub-cleace, hortowal from a similar provision from the English Act of 1927 explaining the circumstances in which a group of voremen should be decreed to be within the same trade or industry was added. The penalties provided for the instruction of an illegal strike were modified. With regard to Cause 20 of the draft Bul, the Committee he'd that there was no sufficient justification for giving an option to the Government to apply for injunctions rectraining the expense of the funds of a Trade Union in connection with ar illegal strike It was considered that unler clause 16 such expenditure had been declared flegal and the persons properly interested in seeing that the funds were not mis-special arc the members of the Trade Union concerned Committee were of the opinion that the Bill had not been so altered as to require republication and they recommended that it should be passed as duly amended by them.

The Select Committee as such did not deal with the question of making provision for pic' eting and intimidation in their report but m a minute of dissent Sir Victor Sassoon, Bart, stated that the alteration of the law relating to picketing was one for which, in his opinion, the time was ripe Picheting of any kind should be rendered illegal while a Court or Board is sitting and the law on picketing at any time should be tion of this kind should take place in this Bill or by an Amen ling Bill to section 503 of the Indian Penal Code. It had been stated that if an amendment of this kind were passed in the Select Committee It would delay the Bill. As he did not desire to delay the acceptance of the

many persons are actually employed upon a 'provisions of this Bill he did not press the point daily rape which is in practice pold monthly, ly high was rolled by other members of the which was relied by other members of the Select Committee. Sir Victor Sar-oon, however. also that the clause as provide I would appear to a Scient Commuter. Sir Victor Sar-cor, however, penalise abstention from the part of a 1 thought that suitable action should be taken b, Government either when the Bill came up before the House or he bringing out an amending Bill to the Indien Penal Code to deal with this most important and nice are point. The action taken by the Government of Bombay in connection with the gar-ing of an Intimudation Act has been dealt with in the chapter on Industrial

> The Bill as emercial by the Select Committee was pared by the Legitarize Assembly on the c'h Ap-il 1924 witho it an- chance and reo it ol the went of the Governor-Greenslovene 12th April 1929. The Actives du to expire early in 1934 but by strine of an americal Actit habeen placed permarently on the Statute Book,

During the period of ready six years for which the Art has been in operation, it has only been made nee of on four occasions; once by the Government of Bombay when they appeared a Court of Laquery in the year 1920 to enquire into the general atribe in Cotion Mills in Lombar Cts in that year, twice by the Government of India who appoint d a court of the general atribe in the grant of the Borrd of Concurtion in 1920 in connection with a dispute in the Bombay, Barrela and Central India Railway of tell are e over the question of the transfer of a number of workmen from the Railway - workshops in Bombay to the new workshops which they were starting in Dohal, and nother Court of Enquiry in 1931 to enquire into and report on the givernors of the large the no before the vere retreveled on all Indian Reliways during that year, and care by the Government of Eurma

Royal Commission's Recommendations.—Tre Royal Commission on Indian labour were of or nion trut some statutory machines will be permanently required to deal with trade disputes and that it will be necessary to consider the form visch such machinery should take be-fore the Trade Disputes' Act expired in 1934. They recommended that the position of establi-ming permanent courts in place of ad kee tribunals under the Act should be examined and also that the question of providing means for the impartial examination of disputes in public utility exercises should be considered. The Commission also recommended that Section 13 of the Trade Disputes' Act should be amended so as to provide that no prosecution or suit shall be maintainable or account of any breach of the section or any damage caused thereby, except with the previous canction of the Government which appointed the tribunal. Act XIX of 1932, thing effect to this recommendation was passed by the Indian Legislature in September 1932

In May 1933, the Government of India issued altered to render it illegal at or near a workmen's a current retter to all Provincial Governments house as under the English Iaw. There inviting opinions, after consultation with the appeared to be some doubt as to whether legislainterests concerned as to (1) whether the Indian interests corremed as to (1) whether the Indian Trade Disputes Act, 1929, should be converted 11.10 a permanent measure, and 2) what amendments, if any, should be made in the Act The Government of India were provisionally disposed to accept the Royal Commission's recommenda-tion to include "Inland Water Services" within

the definition of a "Public Utility Service" chaters and Assistant Conciliators but not "Tramway Services" because the later generally have no monopoly in transport under the Act (a) in any area for which in the areas in which they run Opinions Officer is appointed, on receipt of an appurer also specifically invited on the following or report from such Labour Officer, or five questions (1) whether any statutory where, on receipt of an application from provision should be made in the Act for the or both parties to a dispute or upon appointment of Conciliation Officers, (2) whether knowledge or information is satisfied that a permanent Industrial Court on the lines of trade dispute exists or is apprehended, he the British Industrial Court should be framed the Division industrial Court should be framed may cause holds to be given to the parties to in each Province, (3) whether strikes or the dispute to appear before him and he is embockouts should be prohibited during the penpowered to proceed to bring the two parties dency of a Court of Enquiry or a Board of together with a view to conciliation. The Conciliations, (4) whether awards of Boards of Labour Officer duties are "to watch the interests Conciliations should be made binding on both of workmen with a view to promote harmonious employers and the employed, and (5) whether relations between employer and workmen and picketing either by itself or when it is resorted to a Court workmen to ampliance for the given to the parties to the dispute to appear before him and he is employed to proceed t to while a strike has been referred to a Court or Board should be made illegal The Governor board should be made hegal Inc dovomment of India were also disposed to accept the recommendation made by the Commission to omit the words "between an employer and any of his workmen" in Section 3 of the Act because as this Section stands at present it requires notices of the appointment of a tribunal appointed under the Act to be sent to every individual employer affected by a dispute. The Government of India requested all local governments to send them their replies by 1st November 1938. At the moment of going to press the Legislative Assembly passed a bil introduced by the Government of India to convertibe Trade. Disputes Act into a permanent measure regards the various amendments in the provisions of the Act it is understood that the Government of India propose to introduce another bill in the Assembly sometime later Indian labour in almost complete absence of industrial strife in general has been very badly let down by the communist agitators who dominated labour will be evidenceed by the figures in the follow-platforms all over the country in 1928 and 1929 ing table which show the number of disputes, and to-day there are few labour leaders in India number of workers involved in these disputes who can command respect and adherence from both the employers and the employed labour leaders like Mr N M, Josh, have, during the last two or three years, been engaged in fighting the cause of labour either before the Round Table Conferences in connevion with India's political future or in the Legislative Assembly in connexion with Bills and proposals for new labour legislation

With regard to the action which should, be taken by Provincial Governments the Commission recommended that every Provincial Government should have an officer or officers whose duty it would be to undertake the work of conclustion and to bring the parties privately to agreement The Commissioner of Labour in Madras, the Director of Industries in the Punjab. the Director of Statustics and Labour Com-missioner in Burma and Deputy Commissioners and the Director of Industries in the Central Provinces have already been entrusted with powers as Conciliation Officers

The most notable achievement in the field of industrial conciliation in India was the passing of the Bombay Trade Disputes Conciliation Act, 1984 This Act is, in the first instance, to apply to the textile industry It provides for the ap-pointment of the Commissioner of Labour as exofficio Chief Conciliator and also for the appointment of a Labour Officer, special Con-

If the Chief Conciliator or any Conciliator appointed under the Act (a) in any area for which a Labour Officer is appointed, on receipt of an application or report from such Labour Officer, or (b) elsewhere, on receipt of an application from either or both parties to a dispute or upon his own trade dispute exists or is apprehended, he may cause notice to be given to the parties to the dispute to appear before him and he is empowered to proceed to bring the two parties together with a view to conclusion. The workmen to employers for the purpose of ob-taining their redress Both the Labour Officer and the Conciliator have been given powers of entering premises and calling for documents relevant to the subject-matter of the enquiry The Act came into immediate effect and Mr W B Lilligon, 10s, was appointed Labour Officer with effect from the 1st September 1984. Omeer with enecurron one ist september 1994, in accordance with an undertaking given to Government by the Millwoners' Association, Bombay, for the appointment of the Association's Labour Officer, the Association appointed Mr C A Dalal BSc (London), as their Labour Officer to maintain a uniform policy for discussion and to represent Mill Managements in proceedings with the Government Labour Officer and the Chief Conclusior During the short period for which the Act has been in force remarkable results have been achieved and there is today an and the number of working days lost in textile Mills in Bombay City for each half year from the beginning of 1930 to the end of 1934

## GOVERNMENT ADMINISTRATION.

Governments in India gave the same attention as they did to such subjects as education, health or justice After the amendment of the Indian Factories Act of 1891 in 1911, the appointment of the Indian Industrial Commission in May, 1916, may be considered to be the first milestone in the progressive interest taken by Government in questions connected with labour. The active participation of India in the Great War led to the 'creation of an unprecedented opportunity' and 'the emergence of an unprecedented need' for a definite industrial policy for India as a whole. The examination of various industrial questions by the Industrial Commission included, to a certain extent, the examination of questions connected with labour as well Previous to this date no provincial or All-India inquiries of a general character were held into conditions of labour with the exception of some quinquennial censuses into agricultural wages. No informa-

During pre-Reform days Labour was not a Washington in the year 1919 made at necessary question to which the Central or Provincial for the Government of India and the Governments of the more industrialized provinces not only to consider the question of the representa-tion of labour in the Central and Provincial Legislatures but also to allocate to special departments or offices the administration of labour auestions

Under the Devolution Rules (Schedule I, Part 2, Rule 26) industrial matters included under the heads factories and welfare of labour fall within the scope of the provincial legislatures. Under the same rules" regulation of mines, and "inter-provincial migration, are central A Labour Bureau was established by subjects the Government of India in the year 1920 but it was abolished in March 1923 on the recommendation of the Indian Retrenchment Committee The administration of labour matters since then has been in the hands of the Department of Industries and Labour with a Member of the tion was available in 1919 as to the rates of wages which were paid in industry, and, for that matter, very little information in this direction is available even to-day. Indian labour secured its field for the creation of special Labour Officers, first opportunity with her participation in the signing of the treaty of peace and her becoming a live member of the international comity of a proper Labour Office for the creation of a live member of the international comity of nations. The participation by India, in the first compilation of all kinds of statistics in constants. Viceroy's Council holding the portfolio. Amongst Local Governments, the Bengal and

### Bengal

The Government of Bengal appointed a Labour Intelligence Officer in the year 1920 Labour laws were to be administrated in the Commerce Department, but the Revenue Department continued the administration of the Assam Labour Immigration Act The Labour Intelligence Officer was to keep a record of industrial disputes in the Presidency and also the number of labour organisations. From time to time, as circumstances permitted, he was to conduct special inquiries. He was, however, not provided with an adequate staff for the purpose. The Labour Intelligence Officer is also the Deputy Secretary to the Government of Bengal in the Commerce Department and since the bringing into effect of the Indian TradeUnions Act, 1928, he has also been appointed Registrar of Trade Unions. The Royal Commission on Indian Labour have recommended that Bengal should have a properly staffed Labour office on the same lines and with at least the same staff as the Labour office of the Government of Bombay.

#### Madras.

The Government of Madras appointed a Lalour Commissioner in the same year, viz, 1920, to watch and study at all times the conditions of labour particularly industrial labour throughout the Presidency and to keep Government informed by periodical reports of its movements and tendencies and of the existence of any disputes between employers and employed The settlement of labour disputes and prevention of strikes are features of his work but his interference in such disputes is limited to tendering his offices to settle them — In the case of disputes affecting the internal administration of a railway he may interfere only if both sides agree to his intervention but he must obtain the previous sanction of Government in each case also the Protector of Depressed Classes in which work most of his time is occupied. On a par with the Labour Intelligence Officer, Bengal, the Labour Commissioner in Madras has also no special statistical office to deal with labour statistics and no reports have been published of any apecial inquiries into questions connected with industrial labour in the Presidency the creation of the Office the conduct of periodic censuses into agricultural wages is, however, placed in his hands

#### The Bombay Labour Office

The real pioneer work in the field of labour information and statistics in India during the last fourteen years has been done by the Labour Office of the Government of Bombay which was established in April 1921 In the Government resolution announcing the establishment of this office the following were declared to be its functions—

- "(1) Labour Statistics and Intelligence— These relate to the conditions under which labour works and include information relating to the cost of living, wages, hours of labour, family budgets, strikes and lockouts, and similar matters,
- "(2) Industrial Disputes —As experience and knowledge are gained and the activities of the Labour Office develop it will promote the settlement of industrial disputes when these arise, and

"(3) Legislation and other matters relating to labour—The Labour Office will advise Government from time to time as regards necessary new legislation or the amendment of existing laws"

When the Labour Office was first started 1t was placed in charge of Director of Labour, The post of the Director of Labour was, however abolished in 1926 and the labour office was placed under the charge of the Director of Information whose designation was changed to Director of Information and Labour Intel-With a view to implementing the recommendation of the Royal Commission on Indian Labour in the matter, the Government of Bombay in May 1933 again changed the designation of the Director of Information and Labour Intelligence to 'Commission Labour and Director of Information' ' Commissioner this change in designation the administrative control of the Factors and Boiler Departments was transferred from the Collector of Bombay to the Commissioner of Labour and the Commissioner of Labour was also appointed ex-officio Signer of Labour was also appointed vivillation of Commissioner for Workmen's Compensation and Registrar of Trade Unions Under the Bombay Trade Disputes Act, 1934, the Commissioner of Labour has also been appointed ex-officio Chief Conciliator In addition to the Commissioner there are four granted officers attached to the Labour Office Three of these are Assistant Commissioners of Labour at headquarters in Bombay and the fourth who is called the Labour Officer at Ahmedabad is stationed at that centre. There are also three tull time Lady Investigators but these are not gazetted appointments. The Assistant Commissioners, the labour Officer and all the Investigators receive conveyance allowances office staff contains two Statistical Assistants, three senior clerks, ten junior clerks, two stenographers, one typist one cashier, one despatcher, one daftari and five peons in Bombat and one peon in Ahmedabad The activities of the office comprise (1) prices and cost of llving, (2) wages and hours of labour, (3) rents, (4) economic and social conditions of various communities, (5) unemployment, (6) industrial disputes, (7) trade unions, (8) other industrial and labour intelligence, (9) international labour intelligence, (10) labour legislation, (11) the Labour Gazette, (12) library, and (13) office organisation

The Labour Gazette has been published monthly from September 1921 It is intended to supply complete and up-to-date information on Indian labour conditions and especially the conditions existing in the Bombay Presidency, and to supply to local readers the greatest possible amount of information regarding labour condi-tions in the outside world The Labour Gazette circulates to many different countries and is perhaps the only publication of its kind in India from which foreigners interested in labour and economic conditions in India can obtain accurate It has also hitherto and up-to-date information been practically the only medium through which the work and publications of the International Labour Office has e been made regularly available to people in India. A substantial grant is allowed by the Local Government to the Labour Office for the purchase of books and the Labour

Office has accumulated a very useful and fully catalogued library on labour, industrial and economic matters. The Labour Office library is open to research workers in Bombay. In addition to books, the library contains bound copies of all the more important periodical received from Labour Ministries, International organisations and research organisations in various parts of the world.

The Labour Office has conducted several special inquiries, the results of which have ofther been published in the form of special roports or as special articles in the Among the inquiries the icsults of which have been published in the form of reports mothreeinquinesinto wages and hours of libour in the Cotion Mill Industry in the Bombay Presidency for the years 1921, 1923 and 1926, four reports of inquiries into family budgets three of which related to working class family budgets in Bombay, Ahmedabad and Sholapur and the tourth to middle class family budgets in Bombay Thosemaining reports dealt with inquiries intongricultural wages in the Bombay Presidency, an inquiry into deductions from wages or prisments in respect of fines and an inquiry into middle class unemployment in the flombry Other special inquiries related to Presidency wages of poons and municipal workers, welfare work, rentals in Bombay and Alimedalad, maternity cases among women operatives. methods of wige prements, ereches, clerical wages in Bombay City, incidence of slekness among cutton null operatives, infant mortality, etc. In the Labour Gazette statisties are regularly published for working class cost of living under numbers for Bombar, Ahmedahad and Sholapur, wholesale prices ander numbers for Bombay and Karachi, retail food prices for five important centres in the Bombay Presidency, for industrial disputes in the Bombay Presidency and for Workmen's Compensation, prosecutions under the Indian Factories Act, and the employment situation A new working does index number has been A new working class index number has been compiled for Ahmedabad and statistics with regard to this have been published in the issues of the Labour Gazette since January 1930 working class cost of living index number for Sholapur has also been published Quarterly information is also collected with regard to all known Trade Unions in the Bombay Presidency and full information is published in the Labour Gazette every three months. The present staff of the Labour Office is as follows

'Commissioner of Labour and Director of Information, Commissioner of Workmen's Compensation and Registrar of Trade Unions—Mi J F Gennings, CBE, Bar-at-Jaw, J P

Assistant Commissioners of Labour—Mi & R Deshpande, B Litt (Oxon), Mr N A Melnban BA, Bab and Mr S. V Joshi, BA, (Cantab) Mi Joshi 12 also assistant to the Registrar of Trade Unions, Bombay Presidency.

Labour Officer at Ahmedabad —Mr A S Iyengar, B A , LL B

Lady Investigators — Airs K Wagh, Miss G Pimpalkhare and Miss S Dabholkar (These are non-gazetted appointments.)

The Commissioner of Labour and Director of Information has six offices under his charge (1) The Labour Office, (2) the Information Office; (3) the Office of the Commissioner for Workmen's Compensation, (4) the office of the Registrar of Trade Unions, (5) The office of the Chief Inspector of Labours, and (6) the office of the Chief Inspector of Boilers. In the case of the Office of the Registrar of Trade Unions one Asst. Commissioner of Labour has been appointed as Assistant to the Registrar of Trade Unions and the office work is done by a Statistical Assistant and a jumor clerk from the staff of the Labour Office. The Information Office is under the administration of the Home Department. The Labour Office was under the administration of the Home Department till the year 1925, but it was transferred to the General Department and is now under the control of the Political and Reforms Department.

Central Provinces

The Department of Commerce and Industry is the administrative authority which deals with all labour questions. The Resence Department deals with mine. The Department of Industries under the Director of Industries is in immediate charge of all matters relating to labour. He is also Registrar of Co-operative Credit Societies and Registrar of Trade Unions The factory Othice is under the general supervision of the Director of Industries There is no special Labour Other or Labour Other in the Central Provinces but the factory staff is utilised tor collecting such information on labour questions as may be required from time to time A Board of Industries consisting of representatives of the employers and the employed his been in existence since the year 1914 and all matters affecting the interests of labour arc But the Board considered by this Board. acts purely in an advisory capacity

Other Provinces

In Burma a Libour Statistics Bureau with a Special Officer in charge was set up in 1926 This Bureau has conducted in extensive investigration into the standard and cost of living of the working classes in Ringoon, the Report of which was published in 1928. In the Punjab the Director of Industries is the administrative officer for all acts concerned with labour the United Provinces almost all departments of Local Government deal with labour nons Labour as such is with the Home Member, electricity is with the Finance Member, the factory staft is under the immediate control of the Director of Industries who is under the Minister of Education and Industries and Boller Inspection is under the Public Works Depart-The Registrar of Co-operative Societies of the United Provinces has been appointed Evoffluo Registrar of Trade Unions in the Province In Assam the main question connected with inbour is that concerning the recruitment of labour for the ter plantations from other provinces As inter-provincial migration is a Central subject, the Local Government are not provinces vary actively interested in the special consideration of other labour questions

Representation on Legislatures.—The Government of India nominates one member for labour interests in the Legislature Assembly Since the last reforms were brought into opera-

tion Mr N M Joshi, of the Servants of India Society, has been continuously nominated as labour member in the Legislative Assembly In the Bombay Presidency the Local Govern-ment had provided one seat for labour, and Mr S K Bole was nominated as the labour member in the first two Councils after the reforms 1927 the I ocal Government increased the number of seats for labour to three but the principle of nomination was maintained The three persons representing labour interests in the Bombay Legislative Council at present are Messrs S K Bole, Sjed Munawar and R. B. Bakhale In the Central Provinces, Mr. R. W. Fulay, a Nagpur pleader, has been nominated as a representative of urban factory labour In Bengal there have been two nominated members to represent labour interests since the introduction of the reforms The Assum Government reserves one seat for the nomination of a member to represent labour but it has been found impracticable to find any one who could adequately represent this constituency and therefore the seat is vacant in tho present Assam Legislative Council

Relation between Central and Local Governments—It has already been stated above that under the Devolution Rules, factories. settlement of labour disputes and welfare of labour are reserved subjects These subjects are, however, subject to central legislation The provincial legislatures are not debarred from initiating legislation on these matters but they can only do so with the previous sanction of the The Council Governor-General ın administration of the Acts passed by the central legislature under the above heads falls on the Local Governments who have to bear the entire cost of administration, as it is not permissible under the constitution to incur any expenditure from central revenues on the administration of provincial subjects This constitutional position is perhaps, to some extent, responsible for the opposition shown by some of the I ocal Governments to labour measures on which their opinions have been invited by the Government of India during recent years. The Governor-General in Council exercises control over the administration of the Acts passed by the legislature in two ways in the first place he is vested by Statute with the general power of superintendence, direction and control, and, secondly, these Acts in most cases either reserve certain powers to him to make the powers conferred on Local Governments subject to his control The general principle observed by the Government of India has been to grant to the provinces as free a hand as possible in the administration of the various All-India Acts

Effect of differences in Law in Indian, States and British India—Few Indian States have any labour legislation but most of them are of little industrial importance. The only States which have more than 8,000 persons employed in factories and mines are Hyderabad, Mysore, Indore, Baroda, Jammu and Kashmir, Gwahor and Travancore. Most of these States have a Factories Act which, however, is much below the standard of the corresponding Act in British India. In recent years there has been a tendency on the part of certain capitalists to endeavour to evade the provisions of the Factory Law in British India by establishing mills or factories in the territories of Indian States.

Recommendations of the Royal Commission—The most important recommendation made by the Royal Commission on Indian Labour in connexion with Government administration of matters connected with labour is for the setting up of an Industrial Council which would enable representatives of employees of labour and of Governments to meet regularly in conference to discuss labour measures and labour policy It is suggested that the Council should meet annually and its President should be elected at each annual session The Secretary of the Council should be a permanent official responsible to it for current business The functions of the Council would be (1) the examination of proposals for labour legislation referred to it and also to initiate such "roposals, (2) to promote a spirit of co-operation and understanding among those concerned with labour policy, and to provide an opportunity for an interchange of information regarding experiments in labour matters, (3) to advise the Central and Provincial Governments on the framing of rules and regulations, and (4) to advise regarding the collection of labour statistics and the co-ordination and development of economic research If Labour Legislation is made a Central subject in the new constitution of India, the Royal Commission recommend that the authority finally responsible for such legislation must be the Central Legislature If Labour legislation is to be decentralised, some co-ordinating body will be necessary. The decisions of the body will be necessary. The decisions of the Council could not be given mandatory power, but in certain circumstances it might be made obligatory for Provincial Governments within a specified time to submit proposals for legislation to their respective legislatures for a decision as to their adoption or rejection

The Commission recommended that Labour Commissioners should be appointed both for the Central and in all the Local Governments except Assam Labour Commissioners should be skiept Assam Labout Commissioners but in a selected officers who should hold the appointment for a comparatively long period. They should be responsible for the publication of labour statistics, should have the right to enter all industrial establishments and should be generally accessible both to employers and labour and should act as conciliation officers Where there is danger of establishments being transferred to Indian States in order to escape regulation, an. effort should be made to obtain the co operation of the adjoining states. The Commission also recommended that the possibility of making labour legislation both a federal and a provincial subject should receive adequate consideration, and that if federal legislation is not practicable, efforts should be directed to securing that, as early as possible, the whole of India participates in making progress in labour matters. For States in which there is appreciable industrial development, the Industrial Council should offer a suitable channel for co-operation. On the 7th March 1935 Mr P N Sapru moved a resolution in the Council of State unging the establishment of the Industrial Council on the lines suggested by the Whitly Commission Mr D E Mitchell speaking on behalf of Government expressed sympathy with the resolution. He did not deny that the creation of such in Industrial Council would be of very great value but there was no great hurry for it

on being put to the vote was in sitisol by " votes a fainst seven for

With regard to the que tion of representations of Inhour on the legislature, the floy il Com mission recommended that if special const! thencies iro to remain a feature of the Indian constitution labour hould be casen adequate representation in the Central and Proximald legislatures. The method which is most lifely to be effective in securing the betrepresenta-tives of labour is that of election by it I breastride unions. A special tribunal should be set up in each province to determine before election the weight which should be sixen to:

No person can under the general supervision and control of the large a servant who fails to produce his pocket Inspector-General of Police. A registry is kept register or whose pocket register does not record

the termination of his last previous service, in any On engaging a servant the master has to enter forthwith in the pocket register the date and capacity in which such servant is engaged and cause the servant to attend personally at the registrar's office to have such entry inserted in the general registry Similarly, in case the master discharges a servant he must insert in the pocket register the date and cause of his discharge and the character of the servant Provided that if for any reason he be unwilling to give the servant a character or to state the cause of his discharge he may decline to do so But in such a case he must furnish to the registrar in writing his reasons for so refusing If the servant on dismissal falls to produce his pocket register the master must notify that fact to the registrar Whenever any fresh entry is made in the pocket register the servant is bound to attend the registrar's office to have such an entry recorded in the general registry Every servant whose name is registered shall, if he subsequently enters service in any place not under the operation of the Ordinance, at-tend personally at the nearest police station on his entering or léaving such service and produce his pocket register to the principal officer of police at such station in order to enable the police officer to record the commencement or termination of the service. The police officer has then to communicate it to the registrar of the town or district in which such servant was originally registered

penalties of fine as well as of Various imprisonment are imposed for violation of any of the acts required to bedone or duties imposed by the Act on the various persons mentioned below As respects masters if they fail to fulfil any of the duties imposed on them by the Act they expose themselves to a liability of their being fined to the extent of Rs 20. Similarly a servant, who fails to fulfil any of the duties imposed on him by the Act is liable to pay a fine not exceeding Rs 20. But in case he gives any false information to the registrar or to any other person on matters in which he is required by this Ordinance to give information, he is hable to a fine not exceeding Rs 50 or to imprisonment, with or without hard labour, not exceeding 3 months. A fee of 25 cents is charged to the master on engaging a new servant, a like fee of 25 cents is charged to the servant on his provisional registration, or on registration being confirmed, or for registration of previous service or antecedents. But in case of loss or destruction of the pocket register the servant has to pay one rupee for the issue of a duplicate pocket register.

A similar Ordinance (No. 17 of 1914) has been introduced in the Straits Settlements, where its operation has been limited to such local areas as may be declared by the Governor in Council, and its application within such areas has been restricted to the class of householders who are expected to desire the benefit of the provisions

# Sea Routes between India and Europe.

The Indian port for the direct journey to and from Europe is Bombay. There are ordinarily five lines of steamers by which the journey to and from the West via Bombay can be performed, either by sea all the way, or—and in some cases only—by sea part of the way and by rail across Europe. They are the P. & O, the Anchor Line, the City and Hall Line and the Hoyd Triestino. The Natal line steamers are available for Western passages only, the steamers sailing round the Cape on their Eastward voyages There are ordinarily other services between Calcutta and the

direct journey to and There are ordinarily which the journey to the way, or—and in part of the way and hey are the P. & O., and Hall Line and as Natal line steamestern passages only, and the Cape on their ere are ordinarily following are the fares which are convertible at approximately current rates of exchange.—

a Government subside and is India had no odd, the to growth stored by their a to-

money available for such a purpor, a general already from other countries

The problem of internal air services was freshly taken up by the Government of India in the Department of Industries and Labour when Sir Bhupendranath Mitra was member Government for that portfolio Force of circumstances had already necessitated the appointment of a Director of Civil Aviation and the first holder of the post was Lt-Col F C Shelmerdine, o B E

Non-official members of the Assembly, under the leadership of Dr Moonje, then an elected member, for some time strongly pressed Govern-ment to institute a practical system for the training of young Indians in Civil Aviation They foresay that the development of civil aviation in India was only a matter of time and their great desire was to prevent it following in the wake of the mercantile marine and the commissioned ranks of the army, in which Indians came to the fore under modern conditions only in time to be faced with competition by Britishers who were first in the field upshot of this agitation was an arrangement by which young Indians might be sent to England for training with a view to their future employment in the Civil Aviation Department as aerodrome officers, inspectors of aircraft and engines, etc. Light lads were dispatched for the opening of this system Others followed and results have been successful These men are not trained primarily as commercial pilots, but a development of their training, if they show special aptitude and desire to adopt a pilot's career, is always in view. This is a wise precareer, is always in view caution and some of them take pilot's certi-All of them receive a certain amount of training as pilots and they also go through a post-graduate course at the Imperial College of Science and Technology and a period of attachment to selected aircraft works and to the London Terminal Aerodrome at Croydon course lasts for two years and three months, during which time the men receive scholarships amounting to £240 per annum A condition of eligibility for these scholarships is that applicants must possess a B So degree in engineering or physics

In all, 8 Indians were trained as Government Scholars and are at present employed in the Civil Aviation Directorate Of these, 6 are employed as Aerodrome Officers at Karachi, Allahabad, New Delhi, Calcutta, Akyab and Rangoon, the remaining two as Assistant Aircraft Inspectors at Karachi and Calcutta In 1938, a further batch of 5 ground Engineers was sent to England for training in advance aeronautical engineering One was to undergo a course in ovy-acetylene welding and of the remainder two were to be trained in aircraft and two in engine manufacture for a period of 21 years The course is

Services --SI Bhupendra-Internal Air Mitra was in due course obliged to reconsider the question of assisted internal aerial services in India. An arrangement was made by which the Imperial Airways' Service between Groydon and Karachi was, on 30th December 1929, extended to New Delhi, mails Indian Directors, in which shares are held by from and for Europe being carried to and for Europe being carried to and for Europe being carried to and for Europe being carried to and for Imperial Airways Ltd 51 pc, Indian National each week This conveyance of mails between New Delhi and Karachi was performed under a India 24 pc. This Company operates jointly

special arrangement, the chief point of which was that the service was conducted by the Postal Department of the Government of India and that Imperial Airways chartered to them machines for the purpose This meant, in effect, that the Western service of the Airways Company continued to Delhi, but that technically the service from Karachi eastwards, belonged not to them but to the Government of India. Passengers as well as mails were carried expiration of the period for which the contract on these lines was arranged, the Government of India decided not to renew their charter with Imperial Arrways and adopted the alternative course of contracting with the Delhi Flying Club to carry the weekly Karachi-Delhi air mails to and fro Passengers were also carried by This, like the earlier special arrangement with Imperial Airways. obviously a transitional plan It came into operation early in 1932. It filled the need of the moment, pending the development of a permanent scheme

Before Sir Bhupendranath Mitra could critically develop the matter, he was succeeded in charge of the Departmental portfolio by Sir Joseph Bhore and the latter entered with enthusiasm into the problem. Its solution was largely assisted by a great deal of spade-work carried out by Col Shelmerdine before he resigned his appointment as D C A in order to take up the corresponding one in England scheme was worked out under the direction of Sir Joseph Bhore for the institution of a weekly air-service between Karachi and Calcutta in connection with the weekly arrivals and departures of air mails conveyed by Imperial Airways, Ltd. from and to England If the Government of India had at this time taken no steps towards the organisation of a service of the kind, they would have been unable to prevent Imperial Airways or some other non-Indian concern from establishing one and the authorities in India were determined that civil aviation within India should be Indian in character, either through the development of private enterprise or through the institution of Governmentowned services

The arrival of acute financial stringency following on the world depression, necessitated the abandonment of the Government Karachi-Calcutta service in 1931 Four Avro-10 aeroplanes had already been purchased for the service and they were sold, one of them being retained for the use of Their Excellencies the Earl and Countess of Willingdon, who had newly arrived in India on the appointment of the Earl to be Viceroy.

Efforts to attain the desired result were revived successfully in 1988. Arrangements were made with the British Government and Imperial Airways, Ltd , for the extension of the London-Karachi air service across India from Karachi to Singapore, as a link in the England Australia air service A private company Indian Trans-Continental Airways, Ltd., was formed with rupee capital and a majority of

## THE SUEZ CANAL

year 1934 amounted to 5,668, and receipts amounted to 856,410,000 francs, compared with 5,423 transits and 552,280,000 france in 1963 Thus, in spite of the 41 per cent reduction in dues which came into force on April 1 last, rceipts were over 4,000,000 francs higher But for a sharp fall in the last two months of the year, the receipts for 1934 would have been very much better, for at the end of October the gain over the corresponding period of the previous year was nearly 16,000,000 francs. The subsequent setback was largely the result of a severe contraction in demand in Lastern freight markets during the last quarter of the year Recently there has been a slight recovery in the East-which, if continued, will favourably affect the canal traffic The December figures, which are announced with the results for the year, were 466 fransits and 70,560,000 francs receipts, compared with 488 transits and 77,310,000 francs in December, 1933

Improvement Schemes.—It was announced in 1914 that from and after January 1st, the maximum draught of water allowed to ships going through the Suez Canal would be increased by 1 ft, making it 30 ft

The maximum permissible draught of ships using the Canal was 24 4 feet in 1870, in 1890 ships drawing 25 4 feet could make the passage, and during the following 21 years the increase has been at the average rate of about 1 foot every six years, thus bringing the maximum draught authorized to 29 feet

The scheme of improvement adopted by the Company on the recommendation of the International Consultative Committee of Works, the British representatives on which are Sir William Matthews and Mr Anthony Lister, is a comprehensive one, and the details suggest that it will meet the needs of the big ship

A 40 Feet Channel —The declared policy of the Canal Company in regard to the deepening of the Canal is to offer a slightly greater depth of water than that available in ports east of Channel is thus recured, and there is Suez It is claimed that, with the exception of any apprehension as to its future

Transits through the Suez Canal during the of Sydney, there is no eastern port which at low tide has a greater depth of water than that now provided in the Canal throughout the full length of nearly 105 miles In any case the work in hand should meet the needs of any ship likely to be built for the eastern trade during the next few years.

> When the Canal was opened in 1869, the width was 72 feet and the depth about 26 feet 2 inches, m June, 1913, the width at a depth of 32 feet 8 inches had been increased to a minimum of 147 feet 6 inches over a length of about 85 miles, and to a width of 328 feet over a distance of about 20 miles. The latest scheme makes provision for a depth of 40 feet throughout and for a widening up to 196 feet 8 inches in the south section, and the cutting of an appropriate number of sidings in the north and central sections, where a minimum width of 147 feet 6 inches is believed to be sufficient for the requirements of the immediate future

The work of enlarging the capacity of the Canal presents no special difficulty on the engineeringside A good deal of sand is occasionally driven into the channel at Port Said during storms, but a remedy for this will be found in extension of the west breakwater by about 2,700 yards at a cost of over £6,000,000 The construction of this extension, which has been in hand for the past two years, is making satisfactory progress The Suez Roads are being adequately dredged in accordance with an agreement between the Egyptian Government and the Company.

Almost up to the end of 1915 the works for extending the jetts to the west of Port Said, works of capital importance for the protection of the entry to the Canal were pushed on uninterruptedly In November, however, for uninterruptedly want of hydraulic lime, the manufacture of artificial rocks for this jetty was interrupted The submarine foundations in stone and rubble of the new jetty were, as a matter of fact, com-pleted to a length of 2,500 metres; the protective blocks were laid for 1,040 metres, and comented for over 800 metres. The protection of the Channel is thus secured, and there is no need

		•

daylight if you must By moonlight its seduction is irresistible. Sit on the steps by the entrance gate and watch the moon drift above the trees and the ring of silver light stealing round the base of the dome and creeping gently upwards to the pinnacle. See it also in the fading evening light when amber and rose and gold, the sun sinks in the west behind the crenelated ramparts of Agra Fort. If you must visit it in the broad light of noonday then forget the first view from the gateway and wander awhile about the gardens where you will find exquisite glimpses of snowy structures so light and graceful that they seem to rest on air, of buoyant cupola and climbing campanile. Here is grandeur as well as beauty.

The Taj Mahal, however, is only one of the many interesting sights of Agra, and its Fort, Itmad-ud-Daulah's Tomb, Akbar's 5 miles from Agra, and Fatehpur Sikri, deserted city of Akbar about 23 miles distant are all well worth a visit No other fortress in the world presents so great an appearance of knightly splendour, of proud and noble dignity or, with a more sovereign grace, crowns its red bastions with so wonderous a collection of palaces, mosques, halls of state, baths, kiosques, balconies and terraces as Agra Fort, a mile and a half in circumference with walls 70 feet high faced with red sandstone vigorous style of decorative architecture that Akbar introduced into his red sandstone palaces was embellished by his grandson Shah Jahan who was largely responsible for the delicate inlay work and the low reliefs in white marble There are no buildings to equal these except those found in the Palace in Delhi Fort which Shah Jahan built when he transferrred his to Delhı Akbar's headquarters but supremely attractive style appears at its best in Fatchpur Sikri which he built in his joy at the realisation of his fondest hopes when his son Jahangır was born

There in the year 1569 A D on a lonely eminence, Akbar founded his city and there began to rise as if by magic those great battlemented walls, the magnificent palaces and courtyards, the great mosque and the other superb specimens of the skill of the Moghul stone-masons which stand to this day a source of endless wonder and admiration to visitors

The traveller moves northward past Muttra and Brindaban, famous places of Hindu pilgrimage due to their association with the birth and early life of Lord Krishna, until Delhi is reached Delhi, the capital of India, in days gone by and now the Imperial Capital of India, has no rival in greatness, as all men know that he who holds Delhi holds India Here the visitor will find much that will interest and enthrall him. Here he can trace the growth and fall of dynasty after dynasty, here he will find some of the best examples of the work of the Moghal Period at its zenith as he wanders with muffled feet in the great courtyard of the largest mosque in India, the Juma Masjid, or in Shahjahanabad, the Fort and Palace of Shahjahan whose halls rival those of the palace in Agra Fort with their delicate mlay work in marble and their gardens. Here are crumbling memorials of the Mutiny, Hindu, Rao's house, Kashmir Gate beneath which some still

salute dead Home and Salkhed as they pass, the tree encumbered sites of redoubt and battery, Nicholson's grave, Asoka's pillar, the site of the great Durbar

Kutab, the first of the so-called seven cities of Delhi with its Kutab Minar, 238 feet in height erected in the 12th century A D of red and cream sandstone overlooks the plain where many of the pages of history were written. The Kutab Minar, tapering from the base to the summit, is divided by five corbelled balconies while on the fluting is carved an intricate design in which are introduced verses from the Koran. In the main courtyard stands the famous pillar of solid wrought iron devoid of rust and dating back to about 400 A D. Visitors to Delhi should not miss seeing the Kutab for it is unique in India.

New Delhi, the eighth city of Delhi, is worthy to rank with its seven predecessors, Kutab, Siri, Tughlakabad, Jahanabad, Firozabad, Puarana Qula and Shahjahanabad, the present day Delhi Here you find an example of town planning carried out by some of the leading architects and engineers in the world on a site where they could start with a free hand

If you decide to take the route northwards from Bombay via Rajputana, then you will see another but equally interesting side of India Rajputana, the land of chivalry, attracts the visitor as few places do Alone at Udaipur is there, in its perfection, the farry palace of one's childhood, just such a long cataract of marble terraces and halls falling into the waters of a mountain encircled lake, as the illustrator of an Andrew Lang fairy book delights to draw.

Mount Abu, the Rapput Olympus, combines the delights of a hill station with one of the historic homes of the gods. The Dilwara Temples, the masterpiece of Jain architecture, contain some of the finest carvings in India Forests of marble columns, carved and polished till they resemble. Chinese ivories, are linked by flying arches that twist and twine from pillar to pillar like exquisite creepers, softening outlines and producing the effect of a symphony of graceful movement.

Northwards from Delhi is the Punjab and the North-WestFrontier Province whence most of the recruits for the Indian Army come Here you will find Amiritsar, the home of the Sikhs, Lahore, one of the most ancient and famous cities of India, the Khyber Pass, the historic gateway into India from the North, the flourishing cities of the Canal Colonies which have risen up since British Englineers have harnessed the waters of the Punjab "the Land of the Five Rivers" which formerly ran to waste and many another city Through the Pinjabalso you will travel to reach Kashmir, famous since the days of the Moghul Emperors

The glory of Amritsar is the Darbar Sahib (the Golden Temple) The pavements of the sacred tank are all of marble from Jaipur and the tank itself contains a sheet of water 510 feet square. In the midst approached by a marble causeway, rises the Golden Temple, nearly cubical in form and decorated with wonderful richness.

Lahore grew in importance with the dawn of Moghul supremacy when Babar, the founder

Khyber Pass, the great natural highway anto ludin through the almost impremulate mountain burrier of the North-Nest I confir. is rich in aistorical association and has from time immemorial been the route by which conquering hosts have presed into India to dicturb the peace of her people and continuits after their destiny. It is still the great triding route between India and the Central A can State On Tuesdays and Iridias when the continual string of cirix ins of great shages camels laden with merchandise, accompanied by stern, strong and picturequely dressed men with mater life to their nomen and children from Central Asia are all purishing office to and from Afglian fun, the prepresents a most interesting and unique list

Kashmir, described by poets as "an emerald set in pearls" is a land of rich fore to in a upland pastures, of slow flowing rivers and glittering mount un torients, ringed with in almost unbroken girdle of mount in snow capped all the year. If you can imprime Venice set in the heart of Switzerland that is Sringer, the capital of Kashmir I ife is good is you glide along the fice of the lakes in a house borts when the lotus flower is out and the banks are one mass of colour with the snow capped mountains in the bulground When dive are warm on the lakes a trip can be made up the villeys and you can live in Arcady and see the bear in his native haunts and the inquint the deer on the hill tops

For those who have arrived at Delhi im' Bombay an interesting return trip can be made, via Benares and Calcutta Many vi-itors, however enter India tia Cilcutti and from liere also many interesting fours can be inside,

Calcutta, one of the first trading ports of the all worthy of attention

Before winding your way towards Delhill trips should be made to Darjeeling to see the roof of the world and Mount Everest, the highest mountain and to Puri, the home of the famoutemple of Jagannath. The ambition of every logs of vivid interest visitor to Dargeeling is to see Moint Everet, Luckrow is a city hillowed by memories of the world's highest peak, and, in order to do so a grim struggle, of heroic deeds and noble they must travel some 7 miles away, past sacrifice, its appeal to the Westerner is Ghoom station to Tiger's Hill (8,514 ft) as influenced by its historical connections, its from Dargeeling the mountain is not yielde becautiful buildings and the my sterious glamour. The best time to see sunrisc on Mount Liverest is in the early Spring or late Autumn at the end you will find a view unequalled in any other part of the world Twelve peaks over 20,000 feet with the awe-inspiring Kau-chanjunga in the centre are spread out before you

Puri also 18 an easy run from Calcutta in front of the gate of the temple is the famous

so closely resociated with the East Legend connects the founding of the city with Lakshman, son of King Disamtha of Avodhva and brother of Roma, the mythical hero of the Ramay ina, the epic poem of the Mindus hut Lakshmanpur or Lucknow as it is now called was at its greatest under the five Kings of Outh (1732-1856)

All visitors wend their was to the Residency mack marble pillar, one of the most beautifully and pay homage to the gallant band who keld worked things in India with a tiny figure of the it during the Mutiny against terrific odds until relicted by Sir Colm Campbell. The deeds of Lawrence who was in command until he was killed and of Havelock who made his historic but unsuccessful attempt to rescue the garrison and was himself besieged are well known.

Campore is one of the most important industrial cities of India and here you will find up to-date factories, a symbol of the West with the teeming bazairs where business is still carried on as it has been done for generations

Northern and Central India is, however, not the only interesting part of India and the South can show you sights unlike those in any other part of the World South India is a land of temples, full of the most wonderful carving while Mysore, one of the most progressive Indian States, can show you fine buildings, falls higher than Miagara and wonderful scenery

Madras is the capital of the Madras Presidency and the third largest town in India, and the Presidency includes that part of India which was one of the first in which English and other foreign nations settled. The visitor will still find in the large houses belonging to the merchant Princes with their far spreading compounds, in the conveyances still used by the local inhabitants and in the scenery, which is the India of the old picture books, traces of what India used to be when first the English settled there

Mysore commemorates in its name the destruction of Mahashasma, a minotaur or buffalo headed monster by Chamundi, the form under which the consort of Siva is worshipped as the tutelary goddess of the ruling family State as a picturesque land of mountain and forest presenting the most diversified and beautiful sornery The Capital which bears the same name as the state is a city with many fine buildings and a visitor to India who wishes to see the working of an up-to-date Indian States situated among wonderful scenery cannot do better than visit Mysore Elephants range throughout the southern forests and from time to time keddah operations are undertaken when wild elephants are captured in stockades Tigers, leopards and bears are numerous and bison are found in certain forests The famous Gersoppa Falls present one of the most beautiful sights of wild untarnished nature to be found in India Many of the temples contain examples of the finest carving, and Seringapatam famous as the capital of Tippu Sultan and about nine miles from Mysore is well worth a visit For those who are travelling from Bombay to Colombo an interesting trip can be arranged via Mysore

At Madura and Trichinopoly will be found examples of some of the best and most interesting work in South India

Madura has been aptly described by European scholars as the "Athens of South India" and from time immemorial has been the abode of South Indian culture in all its aspects.

It contains one of the finest and largest temples in South India and unlike many other temples the tourist is allowed to wander without restrictions over most of it Near Shiva's shrine and in

the hall of Mantapam of a Thousand Pillars can be seen some of the finest carving in stone in all the world. The workmanship is so fine, the chiselling so delicate that one is lost in silent admiration as one looks at the representations of the Hindu Pantheon and at the graceful figures of men, women and animals

Trichinopoly is noted for its rock temple and about three miles away is Surangam with its famous temple which is claimed as the earthly abode of Vishnu the Lord of Creation

No one visiting India should miss the opportunity of seeing Burma for it is a country of extraordinary charm, a country of contrasts Whitever be your hobby, whatever be your interest, be it sport, history, ethnology or botany, or should you be merely fond of beautiful scenery you will find a greater variety in Burma than in probably any other country. You can see hige snowy ranges and alps spangled with rhododendrons and flowers unknown to science. You can find magnificent jungles almost impenetrable to man, bordering rushing torrents, or yet against you can see emerald green paddy fields and great winding rivers in the plains Should you be adventurous and seek the wilder regions, you will find great gaps in the frontier unvisited by civilised men and peopled by head hunters, Chins, Nagas and the flerce. Black Lisu. Yet you will also find civilisation in the big cities like Rangoon and Maymyo. Rangoon, the capital, is of special interest in that it possesses the famous Shwe Dagon Pagoda, the Sacred Golden Pagoda visited by more pilgrims than any other Buddhist Temple in Indo-China.

This short account of India is not intended to be comprehensive and does not even mention many of the interesting places to be visited, but it is hoped that it will give some indication of the wonderful pageantry, the magnificent buildings of an older age, the sport, and the many things of interest which India and India alone can offer

December, January and February are the most pleasant months for a visit to India. The days are pleasantly cool and except on the seaboard the nights are cold. India speaking broadly has no winter except in the far north. It is a land of sunshine and colour. But the traveller arriving before. November or staying in the country beyond the month of March must expect to find the tropical sun asserting its sway unless he wends his way to fair Kashmir or to one of the hill stations of India. Simila, the summer capital of India, Darjeeling the delightful or one of the many others situated among the hills of India.

#### Standard Tours.

The planning of an itinerary for an Indian or Burman tour will depend upon the port of arrival, the port of departure, personal desires of the party and the time available. Any of the leading tourist agencies such as Thos Cook & Son, Ltd., the American Express Co., Cox's & King's (Agents) Ltd., Army & Navy Stores Grindlay & Co., Messrs, Jeena & Co., Bombry, etc., and the Publicity Officers of all the more important Railways as well as the Manager, Indian Railways Publicity Bureau, 57, Haymarket, London, and the Resident

Manager, Indian Railway, Publicity Bureau, of the world Part Lordney, America, "Delhi House", 38 hast 57th Street, New Yorl | Ud dpur, Morat Ver to dior, I flore and Ajents companies will also arrange for inclusive and conducted tours There are certain places, which are very well-known such as Delhi, Agra, Benares, Darjeeling, Jaipur, the Klaybet Pass Kashmir and Mysore, but there are innumerable conducted tours There are

Norr — Yan, interesting trips off the besten track can be made in Burma, but special arrangements are necessary

For any visitor landing in Calcutta, it is possible to visit Benares, Agra Delhi, Jaipur, Bombay, Mysore, Madres Trichinopoly and Madura and still reach Colombo on the 14th day, but this entails sightseeing by day and travelling most nights and is not recommended A very attractive for the ordinary visitor tour can, however, be worked out for a similar trip over a period of four weeks either allowing more time at the more important places or including other of the places mentioned in Tours 1 and 4 such as Darjeeling, Puri, the Khyber Pass, Lahore and Amritsar, Udaipur,

Travelling in India is not expensive when the long distances travelled are taken into consideration The first, second and Indian I tion motor cars, guides, etc

servants fares are shown at the end of each tour Hotel expenses average about Rs 15 (22/6 or 5½ dollars ) per person a day except when special rates are charged during certain special periods, while a motor car for the day can be hired for Rs 25 to Rs 30 (38/6 to 45/or 9 or 11 dollars) a day in most places, except when long distances have to be covered Where the distances are short, tongas and two horsed landaus can be used and the daily charges vary from Rs 3-8 to Rs 9 (5/- to 13/6 or 1\frac{1}{2} to 3\frac{1}{2} dollars) Guides with a good knowledge of English can be obtained from Rs 5 to Rs 10  $(7/\overline{6} \text{ to } 15/\text{- or } 2 \text{ to } 4 \text{ dollars})$  a day

It should be noted that the leading travel Bureaux will quote on application inclusive rates covering railway fares, hotel accommoda-

## PASSPORT REGULATIONS.

[Note—These instructions are intended for the information of a blent- in the Rombas Presidency proper only, Residents in Sind should apply for property to the Council slaver in Sind Persons residing outside the Bombas Presidency should apply for property to their respective Governments or Administrations 1

### A.—British Subjects.

British Indian passports are regred ones to -(1) British subjects by blith, (2) wives and widows of such persons, (.i) Billish subjects by naturalization and (1) British-protected persons

Before a subject of an Indian State 1 granted a passport he should show that he has covered all connections with his state of origin and is permanently residing in British India of produce ; a certificate to show that the state has no objection to the grant of a passport

- The Indian Passport Regulations do not require persons to be in possession of per porttor leaving India, but as practically every other of passports before they are allowed to land at the port of such country, trivellers are alvised to obtain pasports before embarkation. Members of His Majesty's Naval, Multury or Vir Forces or of the Royal Indian Navy travelling on duty and members of the families of such persons when travelling to the United Kingdom; on military entitled passages need not have passports.
- Passports are not required for journey that sea from Bombay to ports in India or to Burma, nor are passports required for perminent residents of Cevion or India being British subjects to travel between India and Cester Natives of India traveling to the bederated Malay States or the Straits Settlements do not require passports unless they propose to continue their journey onward
- In order to obtain a passport, an application form (showing, among other the reasons for the proposed journey) should be iilled in by the applicant and the applicant's declaration certified by a Political Officer, Magistrate, Justice of the Peace, Police Officer not below the rank of Superintendent, or Notars Public resident in India Copies of the form can be obtained from any District Magistrate from the Commissioner of Police, Bombay, by cost from the Research post from the Passport Officer to the Government of Bombay, by personal application at the Passport Office, or from any of the leading Banking and Shipping Agents in Bombay Small duplicate unmounted copies of the photograph of the applicant and a fee of Rs 6 in cash should be forwarded with the application form. Fees are not accepted in stamps or by cheque
- The application form when filled in should either be posted with the photographs and fee to the Passport Officer to the Government of Bombay, or should be presented at the Passport Office, Bombay An applicant who forwards his application for a passport through the post may call at the Passport Office at Bombay to take delivery of it in person, but it is desired

the path will be antested to dother of the from in this the opple introduction who will hand over the people to the applicant person ally and take are significant. I we prime next housever, he made in the ear of presported and through reported to Suppose Agent or when the leaning applicants to attend that the part port will be deligered to the hotter

- The Pay port Offic in Botabas I climate ! In the field second great. The other is open from to on in to top in diffs, expited Siturdays when it do tun sechune no tun or p L ta public holiday
- As a presport is valid for five years, there country requires travellers to be in possession to no objective to enson appleing for a prospect prock or even month in advance of the date of alling and much become all me will be asouted by early application. A note of at least noir days should be given for the preparation or incorpassion and the estimality for in enforcement remail or visit The Passport officer cannot in a possion of the passion home industry preparation of a proportities time, applying who pastpone application to the list moment do so at their rist.
  - 5. In ecrisin carona times. TOT EN HILL instance, ease of extreme urgenes, the Presport Officer is authorised to issue a travel document called an "I merson's Certificate" on being suffslied as to the nationality and the bing fides of the apply int In apply stion forms I mer gency Certificate willon no account be considered. units it is accompanied by duplicate unmounted copies of the photograph of the applicant

#### Iraq.

Members of Ills Majests's Naval, Military or dir Lorces or of the Royal Indian Navy in umform and bona side Muhrmm idan pilgrim-(Haj or Init) holding individual pilgrim pieses do not require pis-ports for their journes to Iriq All other trivellers must be in possession of national passports and visas for Iriq. In the absence of Iraq Consular Officers in India, visas for trag are granted by Passport Issuing Authorities in India on behalt of the Iraq Government subject to the conditions stated below. The Iraq visas are of two kinds— Ordinary, valid for all entries into Iraq during a period of twelve months, and Transit, valid for a single journey only, allowing for stay of not more than fifteen days in Iraq The fee for these visas is the same as for British visas—ride paragraph 20 below Iraq national passports are valid for return to that country without any further visa or endorsement.

Except in the case of bona fide tourists of ample and independent means, businessiopresentatives and employees of well estabthat the passport should be sent to him through I lished firms and persons with definite guarantee

of employment in Iraq, visas for Iraq will not; he granted without the previous permission of the Iraq Government The Passport Officer will, on request, ask for this permission by post or, if the applicant is prepared to defray the cost Applicants must state clearly the nature of their business and give one or more references in Iraq to enable the local authorities to make inquiries regarding the purpose of their Journes

With the exception of tourists who may remain for three months in Iraq without registrotion, all persons are required to obtain a "permis de sejour" from the police within fifteen days of their arrival in Iraq No endorsement of departure is required by foreigners learing Iriq except the nationals of those states deving it is except the national which require that Iraquis should obtain a departure visa viz Turkey, Persia and Afghanistan 111 foreigners proceeding by the

And Principalities in the Personn Gulf -Passengers, both British and Foreign, proceeding by Easthound aeroplane on the regular service to India do not require any endorsements or visas on their passports for any of the Arab Similarly, passengers by West-Principalities bound do not require endorsements or visas, for any of the Arab Principalities if they are booked to proceed to Basra and places beyond When, however, they propose to discontinue their journey at Koweit, Bahrein, Sharjah or Gwadur or to break their journey at any of those places, they must comply with the ordi-nary pas-port requirements regarding endorsements and visas

British subjects proceeding to any of the Arab Principalities require an endorsement and visa on ther passports which are granted without prior reference to the authorities concerned in the case of all foreigners the previous permission of the authorities concerned is absolutely The fee in India for British subjects neceseaty for transit and non-transit visas for any of the Arab Principalities is Re 1

## Egypt

In the absence of Egyptian Consular Officers in India visas for Egypt are granted by Passport Issuing Authorities in India on behalf of the Egyptian Government The fee for of the Egyptian Government these visas is the same as for British visas-ride All visas for Egypt placed paragraph 20 below on British passports are free of charge

The Egyptian Government have prescribed rules which regulate the admission of foreigners into Egypt Generally except in the case of British Government officials, bona fide tourists of unple and independent means and representa-tives of commercial houses of good standing, visas for Egypt cannot be granted whether for permanent residence or for a limited period without a reference to the Egyptian Government In applying for visas for Egypt, a form of questionnaire laid down by the Egyptian Government which can be obtained from the Passport Office at Bombay, should be filled in In addition an applicant for a visa should supply in writing,

full particulars as regard the nature of his business in Egypt, the reasons for the journey, the proposed duration of stay in Egypt and what means he possesses

No transit visa for Egypt can be given unless Egypt is necessarily on the route which the traveller must follow to reach his country of destination, and provided there exists no direct route by which he can reach that country without the necessity of passing through Egyptian territory

Holders of the new-form Egyptian passport do not require visas to return to Egypt

#### Palest ine

12 Under instructions recently received from the Foreign Office an applicant for an endorsement or visa for Palestine will be required nistan All foreigners proceeding by the ether to deposit a sum of £60 to be refunded Imperial Airways require a visa for Iraq on their if claimed within four months of the grant of the pis-ports and the exception mentioned in the endorsement or visa, or to furnish a guarantee following paragraph is not applicable to them from a reputable bank for the same amount Passport Control Officers have however, been authorised to waive this requirement at their discretion if they are satisfied that an applicant is a genuine tourist or pilgrim or a person of independent means

> The possession of a British passport endorsed for Palestine does not in itself guarantee the Admission to holder's entry into Palestine Palestine is governed by the Immigration Ordinance 1933 The Immigration authority Immigration may, under the Ordinance, require from travel-lers, a cash deposit of £60 in respect of each person arriving at a port of Palestine and seeking to enter therein as a condition of his admission into the country and as a guarantee that he will leave the country within a period of three months, or such extended period not exceeding one year, as may be authorised by the Immigration authority

> Tourists - Holders of British passports endorsed as available for travelling to Palestine are reminded that the endorsement has been granted on the condition that it is not their intention to remain indefinitely in the country or to seek to obtain work there Any person who ignores this condition without permission from the Director of Immigration, is liable on conviction to not more than six months' imprisonment or to pay a fine of £100, or both penalties. He is also hable to deportation at his own expense

> A tourist may not remain in the country more than three months unless he applies for and receives during this period permission from the Director of Immigration to remain in the country as a tourist which may be granted for an additional period of not more than nine months or permission to settle in the country If permission is refused, such person must leave the country immediately. If he does not do so he will be liable to the penalties mentioned above and also to deportation

> Immigrants -All persons visiting Palestine except as tourists or in transit for another detination require to obtain in advance a permit from the Department of Immigration at Jerusalem, particulars of which must be endorsed

on the passports. A fee of Rs. 1-5 is payable over including Pale time, for which country for an endorsements for Palestine on both the passport and the specifically endored British Indian passports

### Other Country .

Restrictions exist on fravel to various parts of the British Empire and to certain foreign countries. Among these may be men-taoned Afghanist in, Australia, Canada, Pill, 17. Ands on mar. Madagaskar, Mexico, Nohammerah and Abadan, quires a fresh proport. Now Zealand, Northern and Southern Rhode in.

## Foreign Countries

foreign countries require, after issue, the Visa of passions in her own name the Consul concerned. The addresses of the the Consul concerned The address of the foreign consulates in Bombas will be found in the appendix below Visas are, however, not a necessary for Austria, Belgmin, Crechoslovakia, Denmark, France, Germany, Holland, Reland, Italy, Lichtenstein, Luxemberg, Norway, Poetron Court States and Sulfraguest Court States. ## Hill Stations.

In India especially during the months of April and May, and at Christmas time, everybody tries as much as possible to take a holiday in the hills Being anything from 2,000 to 8,000 feet above the level of the sea and difficult of access for motor traffic, the hill stations are delightfully cool and peaceful. Here one can usually ride, walk, play tennis and golf, or simply laze in beautiful surroundings and forget all about the trials of work and prickly heat These are the principal hill stations in alphabetical order—

Darjeeling (8,000 ft)—From Darjeeling the highest mountain peaks in the world can be seen The temperature averages 2° above that of London all the year round, that is, it neither exceeds 80° in summer nor falls below 80° in winter Darjeeling is the summer seat of the Government of Bengal To reach it, the traveller must start from Calciutta by taking train to Siliguri, a journey of 10 hours From Siliguri the journey is completed either by motor or hill railway in about 6 hours The principal hotels in Darjeeling are the Mount Everest, the Grand (Rockville), and the Park.

Kangra Valley—The Kangra Valley is situated about 100 miles east-north-east of Lahore at the foot of the Dhaula Dhar Range of the Himalayas There are magnificent landscapes and many historic temples and buildings The visitor must take train from Lahore to Pathankot where he changes over the newly-opened narrow-gauge railway running between Pathankot and Jogindarnagar in Mandi State Places to stay at are Dalhousie, Dharmsala and Kangra The best hotels at Dalhousie are Stiffie's Grand View and the Arraumoor, and at Dharmsala the Switzes's.

Kashmir—Perhaps the most famous beauty spot in the world can be reached by taking train (either G I P or B B & C I I) from Bombay to Rawalpindi (about 48 hours) whence the remainder of the journey is accomplished by motor. The average height of the valley is about 6,000 feet, and it is entirely surrounded by the lofty, snowy outer ranges of the Karakoram and Himalaya Visitors usually stay either at Srinagar or Gulmarg At Srinagar one can live at Nedou's Hotel or in boarding houses, or one can hire a houseboat and live on the Biver Jhelum At Gulmarg Nedou's is the only hotel. As at Srinagar visitors usually take up their quarters in wooden huts rented through the Srinagar agencies or in tents.

Kodaikanal (7,000 ft)—Regarded by many as the most beautiful of South India's hill stations, is situated on the precipitous southern side of the Palm Hills overlooking the plains. Reached by metre-gauge from Madras to Kodaikanal Road and thence by a 4 hours' motor run. The Carlton is the principal hotel. There are also boarding houses.

Matheran (2,500 ft)—The nearest hill station to Bombay, ideal for walkers and any body wanting rest and quiet Reached by taking train from Victoria Terminus, Bombay, to Neral (about 1‡ hours) whence Matheran may be reached by hill railway (2 hours) or by pony, rickshaw, or on foot by a good walker. Stay at the Rugby Hotel.

Mahableshwar. (4,500 ft)—Until recently, when expenditure had to be cut down, the summer seat of the Government of Bombay. Those who do not motor the whole way from Bombay, a distance of about 180 miles, usually take train to Poona and then hire a car from Poona to Mahableshwar Mahableshwar is noted for its delightful vegetation: orchida and likes bloom in April and May. Hotels—Race View and Frederick

Mount Abu (4,500 ft)—An ideal place for combining the pleasures of a mountaineering holiday with the interests of an archæological excursion Reached by B B & C. I. trains to Abu Road, whence the journey is completed by car. The Rajputana Hotel is recommended There is also a Dak Bungalow containing four furnished rooms, permission to use which must be obtained from the Assistant Engineer, P W D, Mount Abu

Murree (7,000 ft)—The summer headquarters of the Northern Command Magnificent views and walks Visitors take train to Rawalpindi whence they complete the remaining 37 miles by car. The principal hotels are the Cecil and the Viewforth

Mussoorie (7,500 ft)—Much frequented on account of its exceptionally fine climate Reached from Bombay by G I P or B B & C. I trains to Dehra Dun, a journey of 35 hours, where it is necessary to change over to motor which reaches Mussoorie about two hours later. The leading hotels are the Cecil, Charleville, Hackman's Grand, and the Savoy.

Naini Tal (6,500 ft)—Is the summer residence of the Governor of the United Provinces From Bombay there are two ways of getting there The first is to take either G I P. or B B d. C I train to Muttra, thence by metre-gauge to Kathgodam, and thence by motor (2 hours) The second route which takes about 5 hours longer is to take G I P train to Lucknow and then change over to the metregauge railway The Grand, Metropole and Royal are the best hotels.

Octacamund —Familiarly known as Ooty is situated on the famous Nilgiri Hills at an altitude of 7,500 feet. The mean average of temperature for the year from sunrise to sunset is 57 33 degrees. Ootacamund is the administrative centre of the District and the seat of the Madras Government for six months of the year from April to September. Reached either by

taking train to Missore (10 hours from Hombas).

Simia (7,000 ft ). The summer herologistics and then changing to motor-car for five hours, i of the trove ram at of India, is affirsted or accord and then changing to incore for five hours, to the hours must of Inella, is placed or several or by taking train to Methoplavam I is Madray amili spurs of the loss Himalayse. To anis and thence by hill raily as to Ontacamund the principal hotels are the Savoy and Ceili the end of Apptember, and in October and The principal hotels are the Savoy and Ceili Sovember Simis collect the fortinate in Pachmari (3,500 ft)—Situated on a plateau in the Mahadeo Hills, is the summer quarter of the world Reached ft of Inabay by taking in the Mahadeo Hills, is the summer quarter of the world Reached ft of India at the falls at the retailed by the control Provinces. A other by hill railway or tentor, Therefore by G. I. P. railway to Pipariya I as Jubbulpare, building hotels are the Ceili, Clarks, Coastor, Large, and a two hours' motor journey. The best Grand, (while are the Savoy) and Williamer, hotel on the Hill.

## CLIMBING IN THE HIMALAYAS.

and exploration remains to be dono in the worlde, Neputalized the roughts highest mountain range. There are ever lift, summits of 25,000 ft and of these only one. A New Phase—Near while Kamet (25,447 ft) has been scaled, whilst there is formed in the content of

Pioneer Climbers.—Mountaineering in the Himalayas began some eighty years ago when surveyors crossed high passes and scaled peaks in the course of their work. Among these pioneers must be mentioned the Schlagintweit brothers, who in 1855 reached a height of 22,320 ft. on the Eastern Ibi Gamin, one of the subsidiary peaks of Kamet, whilst I. S. Pocock of the Survey of India set up a plane table at 22,040 ft in the same district Another notable early explorer was the famous botanist Sir Joseph Hooker who, in 1849, explored the Sikkim valleys of Kanchenjunga and Pioneer Climbers.-Mountaineering in the red the Sikkim valleys of Kanchenjunga and made attempts to climb Kangchenjau, 22,700 It and Pauhunri, 23,180 ft. Some remarkable explorations were also carried out by the Pandits of the Survey of India. Among these men was Babu Sarat Chandra Das who traversed the Jonsong La, 20,200 ft.

Later in the nineteenth century came Sir Martin (now Lord) Conway who, in 1892, made explorations in the Karakoram Himalayas, particularly in the region of the Baltoro Glacier, the greatest of Himalayan glaciers, and climbed a peak of 28,000 ft. Sir Francis Younghusband also made explorations in the Karakorams and accomplished the first crossing of the Karakoram Pass The Duke of the Abruzzi also made a number of expeditions into this range and reached a height of 25,000 ft, on the Bride Peak
Mountaineering developed rapidly in the
"nineties", and a bold attempt was made by
A. F. Mummery, Professor N. Collie and Brigadier-General the Hon. C. G. Bruce to climb
Nanga Parbat In a final attempt on the weather forced the party to retreat.

Owing to their immensity and the time and immental Minorphy so. I have a Garkhan near cost involved in undertaking expeditions into lost. In 1900 to W. Freidick i say in the first the Minorphysis a great deal of mountaineering circuit of Ranchesinass and explored the

A New Phase — More while, thanke to Prizolist-General Bruce, therebase, or I Later the epas and Bhotian a contribute for a container-ing and, with the advent of first class porterage, Himaliann mountainer-ing entered on a very place. Dr. and Mrs. Bullock Works an reader a number of contillion to the Contribute and Mrs. dablo difficulty, owing to the comparativels, with the advent of first class forterage, Hima-recent geological formation of the rance, that judged by modern mountaineering standards the majority are inaccessible. The highest the majority are inaccessible. The highest of expelitions into the Karakorams and W. W. peakis Mount Everest, which by latest measure, ments is 29,141 ft. Next come Kanchenjunga and K2, both about 28,150 ft, though which is the higher of the two is not certain. controlors. Raben was later attempted by two Norwellans, Messes Rubenstein and odt lo 19.3 nel a aidtly tog edw eak banok

> The present centure opens I with a number of remarkable ascents by Dr. A. M. Kellas, who died during the 1021 Events expedition. He climbed several great poaks including Kanschenjan, Panhunri and Chombonio and made expeditions to the Central Himpingas where, with Colonel H. T. Mortherd he reached in 1920 an altitude of 23,500 ft. on Kamet

> In 1907 Brigadler General Bruce, Dr T. G. Longstaff and A L Nummer explored the Garine at, Himalayas and reconnotized Kamet. After this Longstaff, with the Swisz guides Alexis and Henri Brocherel, ascended Trisul, 23,406 ft which, until the Jonsong Peak, 24,314 ft., was olimbed in 1930 remained the highest summit reached. In 1911 and 1912 attempts were made to elimb Kamet by C. F. Meade and his Swisz guides and a height of 23,500 ft was gained Captain Morris Slingsby also attempted Kamet at this time ted Kamet at this time

Kanchenjunga -The Arst Attempts Attempts on Kanchenjunga—The urst-attempt on Kanchenjunga was made in 1905 but ended in disaster, Lieut Pache and three porters being killed by an avalunche The second attempt in 1920 was made by a solitary American, E. F. Farmer, who lost his life. In the same year a determined attempt was made by a party of Bavarian Mountaineers led by Paul Bauer. A height of over 25,000 ft 011 was reached on the north-east spur before bad - In 1930 a fourth attempt was made by an International expedition led by Professor and Dr. C R. Greene climbed Kamet G. Dyhrenfurth The party attempted the mountain from the Nepal side, but were repulsed by an are avalanche which killed one of the proceeded to its man task porters. Subsequently, they ascended a number of peaks including the Ramthang Peak, 28,200 ft. and the Jonsong Peak 24,344 ft.

The fifth attempt in 1931 was made by Bauer and his party, but failed at a slightly greater elevation than was attained in 1929. One of the party H. Schaller and a porter were killed by a fall during the expedition.

In the summer of 1931 a party of young British climbers led by Mr. F. S. Smythe succeeded in reaching the summit of Mount Kamet (25,447 ft) the highest mountain peak, though not the highest altitude ever reached by

Mount Everest —A description of the attempts to climb Mount Everest, the highest mountain in the world, may be divided under three headings the reconnaissance expedition of 1921, the first attempt in 1922, and the second in 1924 A still further attempt is being made at the time of writing, in April, 1983

The preliminary expedition for the reconnaissance of the approaches to Mt Everest, carried out its work in the most complete manner under the leadership of Lt -Col C. K. Howard-Bury. The approaches to Mt Everest on all its northern faces were thoroughly examined, and relations were established with all the local authorities. On the information and experience of the reconnaissance expedition the second expedition to Everest was organised and set off the following year under the leadership of Brig.-Gen the Hon. C G. Bruce Capt. G I Finch and Capt J. G Bruce succeeded with the help of oxygen in reaching the height of 27,800 ft During this expedition seven men were killed when an avalanche swept them over an ice cliff some 60 feet high

The 1924 expedition was again commanded Brig-Gen Bruce But owing to his ill by Brig-Gen Bruce But owing to his ill health Lt.-Colonel E F. Norton took on the command. Lt.-Col E F Norton and Dr T. H. Somervell reached a height of 28,200 feet Then a final attempt was made by G L Mallory and A. O Irvine. They were assisted by a supporting party consisting of N. E. Odell and J de V Hazard. On June 6th they left the 25,000 feet camp with three porters who carried loads for them up to 26,800 ft. On June 8th they left camp for their attempt and were never seen again. On June 10th for the third time Odell climbed up to the 27,000 feet camp but could find no sign of Mallory and Irvine, and communicating with Norton evacuated the mountain.

The expedition of 1988 followed a successful effort by Lt -Col. J L R Weir, Political Officer in Sikkim, to obtain the permission of the Tibetan Government for a further attempt to climb the mountain An Everest Committee was formed under the aegis of the Royal Geographical Society and the Alpine Club and Mr Hugh Included in it as members were Mr F S Smythe, was made in 1934 by Maurice Wilson, a young leader of the successful Kamet Expedition of airman Having penetrated Tibet in disguise

The expedition established its base camp in the Rongbuk Valley on April 17th and on April 21st. Camp I was established. Thenceforward the expedition was dogged by exceptionally bad pre-monsoon weather which greatly hindered the establishment of camps and made the ascent to the North Col. 23,000 ft prolonged and arduous work. Camp IV, 22,800 ft was not established until the middle of May after a 40 feet ice wall on the North Col slopes had been climbed. The expedition was equipped with wireless which enabled weather reports to be received from the meteorological authorities at Alipore One installation was at Darjeelinig, one at the base camp and a third at Camp III, 21,000 ft Camp III was linked to the North Col by field telephone so that messages could be received up to 23,000 ft from the plains of India in a short space of time,

Owing to a series of blizzards and high winds Camp V was not established until May 22nd But it was pitched at 25,500 ft several hundred feethigher than previously The party was then out off for three days by a furious blizzard and eventually had to retreat to Camp IV. The Camp was re-established on May 28th and on May 29th. Wyn Harris, L Wager and J. L. Longland continued the ascent and finally pitched Camp VI at 27,400 ft, 600 ft. higher than in 1924, after a magnificent effort on the part of the porters. Longland then brought the porters down but had a terrible time in a blizzard and only by exercising great mountainearing skill steered them down to Camp V The following morning Wyn Harris and Wager made a reconnaissance of the route to the summit and falling to discover a route along the crest of the north-east ridge finally followed the same route as Norton in 1924. They were stopped by dangerous conditions at 28,100 ft and returned to Camp VI where they met Shipton and Smythe who had come up from Camp V, after which they descended to Camp V The following morning Shipton and Smythe were unable to leave Camp VI owing to a high wind but on June 1st they made their attempt on the summit

An hour and a half after leaving the Camp Shipton had to return owing to some internal trouble. Smythe carried on alone and reached approximately the same point as Wyn Harns and Wager before he was forced to retreat owing to the deep powdery snow resting on the steep slabs Shipton descended to Camp V the same day in very bad weather and Smytho spent a third night at Camp VI descending to Camp IV next day in a blizzard Owing to frostbites, strained hearts, and high altitude deterioration the party had to retire to the base A week later they returned to Camp III to make another attempt Owing, however, to the breaking of the monsoon this had to be abandoned and the expedition returned to Darieehng.

An extraordinary attempt to climb Everest was made in 1934 by Maurice Wilson, a young

he marched to Everest and with a few porters port officers succeeded in reaching 21,000 feet. He then went on alone and nothing more has since been heard of him. As he had no mountaineering experience, it is presumed he perished on the slopes of the North Col

Aprial Expedition —An interesting aside to the exploration of Everest was an aerial expedition exploration of Everest was an aerial expedition undertaken in 1933 for the purpose of photographing the mountain from the air This venture was financed by Lady Houston Major L V S Blacker, formerly of the Guides, was its leader and in charge of its survey work, Lord Clydesdale chief pilot, Fit Lt A Maintyre second pilot and Major P T. Etherton, its London manager Two specially equipped aeronlanes adaptations Major P T. Etherton, its London marager Two specially equipped aeroplanes, adaptations of the well-known Wapit, were provided A special point in their equipment was the provision of compressed oxygen for supply through gas masks to the aviators at high altitudes. The expedition was not permitted to fly across the Tibetan frontier, so as to girdle Mt. Everest, but both machines successfully circle Mt Everest, but both machines successfully flew over the peak and several good photographs were taken of it. By permission of the Nepal Government a line of flight from Purnea, the base of the expedition, across Nepal territory to Mt Everest, was taken and along this good survey photographs as the somewhat poor visibility at the time of the hight, in April, permitted.

An interesting mountainflight of which An interesting mountaining of which details were published in 1933 was one from Risalpur to Gilgit and back, undertaken by the R A F at Risalpur in the course of its routine duties in October, 1932 The expedition was commanded by F Lt Isaac and was made by five of the machines ordinarily in use by the Force The distance from Risalpur by way of the Indus Valley and past Nanga Parbat to Gilgit is 286 miles It was covered in 2 hrs 20 mms on the outward flight and in 2 hrs 5 mins on the return journey From Glight the machines further proceeded upon flights over the Hunza, Nagar and Rakiot areas Brilliant photographs of Nanga Parbat and Rakaposhi, as well as of other places of importance or interest, were taken

The year 1982 saw a well organised expedition to Mount Nanga Parbat It was conducted by Dr Merkl, of Munich, and included Lt. R. N. Frier, of the Gilgit Scouts, who acted as transport officer, an American Mr. Rand Herron and Miss E. Knowlton, of Boston, U.S.A. Several determined attempts to reach the summit of the mountain in August were brought to an end by the break-up of the weather before they attained success

port officers Fatality early overtook the expedition, Herr Drevel dying of pneumonia Owing to various delays, Camp IV was not established until the end of June. The party then proceeded to rush to the peak leaving only skeleton camps behind I inally, after a height of 25,600 feet had been reached, and Camp VIII established at 24,800 feet, a terrible blizzard broke The party retreated, but owing to the storm and ill-equipped camps retreat became a rout during which no fewer than nine lives were lost, Herren Merkl. Welrenbach and Wieland and six Darjeeling porters—men who had accompanied the 1933 Liverest Expedition Of the Europeans only the two Austrians Herren Of the Luropeans only the two Austrians Herren Schneider and Aschenbrenner escaped whilst of the surviving porters, all of whom were frostbitten one or two spent a week without food or shelter.

This is the worst Himalayan mountaincering disaster that has yet occurred

Another expedition to the Karakorams took place in 1934 under the leadership of Dr G Dybrenfurth All four peaks of "Queen Mary" were climbed The highest of these has been triangulated as 24,350 feet, but the party state it to be more than 1,000 feet higher.

In 1934 Messes E E Shipton and H W Tilman, by a magnificent piece of exploration and mountaineering, succeeded in penetrating the litherto impracticable Richi Ganga to the glacier basin of Nanda Devi, thereby solving a problem that had exercised the minds of Himalayau mountaineers for many years and completing the work of pioneers such as Dr. T G Longstaff and Mr Hugh Ruttledge Mesers Shipton and Tilman also crossed from Badrinath to Gaagotn via the Satopanth Pass and explored the head of the Gangotri glacier

Lt -Coi C F Stochr, R E, and Lt D M Burn, R E, lost their lives on 12th August 1932, while climbing on Panjtarni, near Pahlgam in Kashmir

Several expeditions have lately been made into the Himalayas by members of the Himalayan Club, especially expeditions into Sikkim by members of its Eastern Section.

The Himelayan Club Was founded on 17th February 1928, at New Delhi with the object of encouraging and assisting Himalayan travel and exploration, and extending knowledge of the Himalayas through science, art, literature and sport. The initiation of this Club was due to the Houthle Statement Country. to an end by the break-up of the weather before they attamed success

The Disaster of 1934.—In 1934 Herr Merki returned to the attack with an even stronger party, which included a number of well-known German and Austrian mountaineers and Captains Finer and Sangster of the Indian Army as trans-

# The New Capital.

Calcutta to Delhi was announced at the Delhi Durbar on December 12, 1911. It had long been recognised as necessary, in the interests of the whole of India, to de-provincialise the Government of India, but this ideal was unattainable as long as the Government of India. were located in one Province, and in the capital of that Province—the seat of the Bengal Government-for several months in every year It was also desirable to free the Bengal Government from the close proximity of the Government of India which had been to the constant disadvantage of that Province To achieve these two objects the removal of the capital its disadvanfrom Calcutta was essential tages had been recognised as long ago as 1868, when Sir Henry Maine advocated the change Various places had been discussed as possible capitals, but Delhi was by common consent the heat of the heat of the capitals. the best of them all. Its central position and situation as a railway junction, added to its historical associations, told in its favour, and, as Lord Crewe said in his despatch on the subject, "to the races of India, for whom the legends and records of the past are charged with so intense a meaning, this resumption with so intense a meaning, this resumption by the Paramount Power of the seat of venerable Empire should at once enforce the con-tinuity and promise the permanency of Bri-tish sovereign rule over the length and breadth of the country."

The foundation stone of the new capital was laid by the King Emperor on December 15, 1911, the finally selected site being on the eastern slopes of the hills to the south of Delhi, on the fringe of the tract occupied by the Delhi of the past. The land chosen is free from liability to flood, has a natural dramage and liability to flood, has a natural dramage, and is not manworn. It is not cumbered with monuments and tombs needing reverent treatment, and the site is near the present centre of the town of Delhi. A Committee consisting of Surgn.-General Sir C. P. Lukis, Mr H. T. Keeling, C.S.I., A. M. I.O.E., and Major J. C. Robertson, I. M. S., was appointed to consider the comparative healthiness of the site and of an alternative one to the North of the existing city. Their report, dated 4th March, 1913, states that "the Committee, after giving full consideration to the various points discussed in the above note, is bound to advise the Government of India that no doubt can exist as to the superior healthiness of the southern site, the medical and sanitary advantages of which are overwhelming when compared with

The transfer of the capital of India from which gives the motif of the whole, is Government House, and two large blocks or Secretariats This Government centre has been given a position at Raisma hill near the centre of the new city Sir Edwin Lutyens is the architect tor Government House and Sir Edward Baker for the Secretariats The former building is estimated to cost approximately Rs. 140 lakhs and the latter groups were originally estimated to some Rs 124 lakhs. The provision made in to some Rs 124 lakhs. The provision made in the design of the Secretariats for extensions in case if used has already partly been utilised. The Secretariat personnel has largely increased in the past few years and numerous additional rooms had to be provided to make room for Army Headquarters, which provided in the past few years and purely the second of the provided to make the provided to the Army Headquarters, which moved into the new capital at the end of the Sımla season, 1929 To the east of the forum, and below it, is a spa-cious forecourt defined by an ornamental wall and linked on to the great main avenue or park-way which leads to indrapat. Across this main axis runs an avenue to the shopping centre Other roads run in different directions from the entrance to the forum The axis running north-east towards the Juma Masjid forms the principal approach to the new Legislature Chambers They are officially described as the Council House and the road is named Parliament-street. The railway station for the new city finds its place about half way between the old and new cities off the road through Pahargunj, which lies to the west of Old Delhi in the direction of The The main roads or avenues range from 76 feet to 150 feet in width with the exception of the main avenue east of the Secretariat buildings where a parkway width of 1,175 feet has been allowed The principal avenues in addition to the main avenues are those running at right angles to the main east to west axis.

> For a temporary capital, for the use of the Government of India during the period of the building of the new capital an area was selected along the Alipur Road, between the existing civil station of Delhi and the Ridge The architecture and method of construction were similar to those adopted in the exhibition buildings at Allahabad in 1910; but the buildings have outlasted the transitional period for which they are intended Army Headquarters were still housed in them in the winter until the season 1929-30 They are now occupied for various purposes including the temporary accommodation of Delhi University.

In October, 1912, by proclamation, there was constituted an administrative enclave of which are overwhelming when compared with those of the northern site",

The Town Plan and Architecture.—A report by a Town-Planning Committee, with a rian of the lay-out, was dated 20th Narch, 1913. Work was begun in accordance with it and its work was begun in accordance with it and its included in the Province was 398,269 and of the main lines have been followed throughout the central point of interest in the lay-out, population of the Municipal town of Delhi

The Project Estimate contains certain itemsuch as land, residences, water supply, electric light and power, and irrigation on which recoveries in the form of rate or taxes will, in ad some return on account of the sale of leases, general taxes and indirect receipts is secured. The project, after being completed and closed was re-opened in 1933-31. This became necessary owing to the need to increase residential accommodation for officers and staff and facility ated by a period of cheap money. Government utilised the occasion for extending the residential accommodation for visiting members of the Indian Legislature.

Progress of the work.—The construction of New Delhi was made at satisfactory speed, having regard to the curtaliment of the Budget allotment in consequence of the war and the absence of officers and other establishments at the war The Secretariats were so far advan-

was 2,20,144. The plans of the Len Capital headquarters of the Poyal My Love in India allow for a population within it of 70,000. Its present population is approximately 40,000 files have been allotted for forty Ruling Princes and Chiefs to build home for their own occupation during their visits to the my city, and several of the a habitations have been exceed.

There was, as regards architecture, a per longed "battle of the styles" over Delbi Finally, to use the language of the architect, it has been the aim "to express within the limit of the medium and of the power of its users, the ideal and the fact of British rule in India, of which the New Delbi must ever be the moon ment." The inspiration of the designs is manifestly Western, as is that of British rule, but for the first of the styles of the support of the designs is manifestly western, as is that of British rule in India, for the inspiration of the designs is manifestly western, as is that of British rule in India, for the inspiration of the designs is manifestly western, as is that of British rule in India, for the inspiration of the designs is manifestly western, as is that of British rule in India, for the inspiration of the designs is manifestly western, as is that of British rule, but the state of the first of the state Cost of the Scheme —It was at first tenta Generalization of first to the first the continued that the first tenta Generalization of the first the Cost of the Scheme —It was at first tests there is the setting and that tests the expension of the new capital would be four million sterling and that sum the enter in the original despatch of the Got oriment of India on the subject. Actions the chief of these being the immensa rise in the chief of these being the immensa rise in prices since the war, and the Legislative Assembly were informed by Government on 23rd March 1921, that the revised estimates then amounted to 1,307 lakhs of rujecs. This amount included allowances for building new Legislative Chambers and Hostels for Members of the Indian Legislative, which were not allowed for in the earlier estimates. The New Capital Inquiry Committee, in its report published in Jannary 1923, estimated the total expenditure at Rs 1,221 lakhs including Rs. 42 lakhs for loss by 1 x change. Actual expenditure upto approximately the end of 1920 was Rs 11 cores. This may be taken as the figure for the completion of the main project.

The Project Estimate contains certain items as a land, residences, water supply absents and and residences, water supply absents as land, residences, water supply absents as land, residences, water supply absents the fluide Health to an issiscer entiry a residence of the Public Health to an issiscer entiry a residence of the Public Health to an issiscer entiry a residence. unherithm wof the Winter Capital to Oxoter

Art Decorations -The Government of India in 1027 approved a scheme for the encourdition to meeting current expenditure, partially agement of Indian artists in providing faciliats any rate cover the interest on the capital fies for the descrition of certain buildings outlay, whilst there are other items on which in New Delhi The outlines of the scheme are some rature on account of the sale of leases. briefly as follows: A certain number of dornes and ceilings in the New Secretarist Buildings at Delhi sultable for decoration were selected. The various schools of art in India, as well as individual artists, were insited through local Governments, to send in by the beginning of March 1928 small scale designs for approval by a Committee. After approval by the Com-mittee both as regards the design and colour the pictures were to be drawn out and printed to full size on canvas, and, if finally approved by the Committee, fixed according to the marou-Other techniques, such flage process in silu. Other technique as iresco or tempera, were optional Artists ' or schools of art, who sent in small scale drawings, had to bear the initial expense of preparing at the war The Secretariats were so far advantitiem. When these were approved by the ced that there were transferred to them from Committee, the out-of-pocket expenses Calcutta in October, 1924, the offices of the paid in addition to a suitable honorarium Accountant-General, Central Revenues, and the Government undertook to pay for the finished

pictures dono from approved sketches but give no guarantee that the finished painting-Government will permanently be preserved allegorical OT historical intimated that subjects would be given preference over religious ones, and English artists living in India were barred from competition, the work being strictly resorted to Indian artists Numerous artists submitted designs, especially those of Western India, and with such satisfactory results that the specially appointed Expert Committee approved of nearly all. A great deal of printing has now been completed and the work is continually progressing Govern-ment, meanwhile, instituted a scheme for sending selected artists to Europe for finishing studies to enable them the better to join in the work, and this is in operation.

Opinion of the Legislature—Considerable discussion regarding the new works took place in the Assembly in 1921. The following unofficial resolution was carried—"This Assembly recommends to the Governor-General in Council that in the interests of economy and of general convenience alike the execution of the programme of New Delhi works may be expedited and the necessary lunds provided or raised so that the Secretariat and Legislative buildings and connected works including residences may be completed as early as practicable."

A non-official Member in the Legislative Assembly on 28th September, 1921, at Simia, moved a recommendation to Government "to appoint a Committee to inquire into the possibility of establishing a permanent Capital of India in a place possessing salubrious and temperate dimate throughout the year." This proposal was ridiculed by several of his non-official colleagues and was eventually rejected without a division.

HRH. the Duke of Counaught, on 12th February, 1921, laid the foundation stone of a large group of parliamentary buildings on a site close to the south-east of the Secretariats. The building is an imposing pille orrellar in shape, consisting in the main of three horse shoe-shaped Chambers for the Chamber of Princes, Council of State- and Legislative Assembly respectively and surmounted by a large dome over a Central Library connecting all three Chambers.

HE the Vicercy (Baron Irwin) proceeded in state to the new Legislative buildings henceforward to be known as the Council Buildings and formally declared them open on 18th February 1927. The India legislature began its sessions in them next day.

During 1928, official and public attention became focussed on the need to effect drastic improvements in some of the crowded areas of the old city and to provide for its expansion and for suburban developments. This led to the examination of the possibilities of the area lying between the old and new cities and of the desirability of driving connecting roads through the City walls in order to give access outwards in this direction. The old city is now rapidly expanding in a westerly direction, i.e., towards and up the Ridge, which runs behind both cities and the spaces between the two cities are being

developed and utilised So far the plan for a direct thoroughfare from the midst of the new city through the old city wall to the middle of the old city has not been proceeded with and consequently the magnificent thoroughfare, name Parliament Street, which was constructed for the purpose in New Delhi remains in a truncated condition. The Delhi Municipal Committee late in 1933 declined to co-operate in a completion scheme, on the ground that it would result in changes in property values in the old city to the disadvantage of many owners. The Medical Officer of Health of the old city in his latest reports gravely stresses the ill effects of its overcrowded state and in this he is borne out by the Municipality in its reports

H E the Viceroy on 10th January 1930 laid the foundation stone of a large European and Indian General Hospital to be built in the course of the next few years at a cost of Rs. 75 lakhs for the service of both old and new cities. This would provide 254 beds and the necessary laboratories and administrative and residential quarters. No progress has yet been made with the building work on which has for financial reasons been postponed.

All-Iudia War Memorial—H R. H. the Duke of Connaught on 10th February, 1921, laid the foundation stone of an All-India War Memorial at the southern end of the Central Vista. The place chosen is a fine position in the centre of the circular Princes' Park and the construction of the building was for economy's sake proceeded with slowly. The memorial was formally inaugurated by Lord Irwin in February, 1931.

The Memorial takes the form of a triumphant arch spanning Kingsway, the avenue running down the centre of the Vista It is generally similar to the Arc de Triomphe in Paris but is simpler. The monument reaches a height of 160 feet and the inner height of the arch is 87 feet 6 inches and its breadth fronts appears in capital letters the single word INDIA and this is flanked on each side by the initials MOM (is. 1900) whilst immediately below them on the left hand are the initials XIV (is. 14) and on the opposite side the figures XIX (is. 19). Above the Arch is a circular stone bowl 11<sup>1</sup>/<sub>2</sub> feet in diameter. A column of inoffensive charment arch on Over the A column of inoffensive chemical ın dıameter smoke ascends from this on ceremonial occasions and anniversaries and is illuminated by electric The memorial light reflections after dark bears the names of British and Indian officers and N C Os and men according to an discription carried upon it and running

Public Institutions.—It was proposed during 1914 that a higher college for Chiefs should be established at Delhi and in this connexion a conference of Chiefs and Political Officers was held at Delhi at which the Viceroy presided The proposal is still "under consideration" To implement it would require an estimated capital outlay of Rs 12½ lakks

The Government of India further in the Spring session of their Legislature in 1922 introduced and carried: Bill for the establishment of a unitary, teaching and residential

University of Delhi, the buildings for which would be erected in the new capital. The plan was to provide a local university on the model recommended for Dacca University by the Calcutta University Commission. The complete provision funds for the οf realisation of the university must be a matter of time and it was, therefore, decided to commence work with the existing colleges in their present buildings and to permit them gradually to modify their organisation. The initial work of organisation was quickly effected by the Executive Council. Unfortunately the inability of the Government of India to allot considerable of the Government of India to Buot consideration funds was a severe handleap. It was hoped that H E. the Viceroy would be able to lay the foundationstone of the university buildings in Kovember, 1922, but this proved impracticable. The general question of the finances of the University was in 1927 the impracticable. The general question of the finances of the University was in 1927 the subject of inquiry by a special Committee appointed by Government For the time being the University was housed in the temporary buildings in old Delhi occupied by the Civil Secretariat until 1929 and in 1931 Old Viceregal Lodge was allocated to it for its future home

manuguration ceremonies in February, 1931 building Otherwise the available restinitial The first of these was the unveiling of four building space is almost covered and the time "Dominion Columns" suitably placed about his come to consider and plan extensions of the the great place between the two Secretariat city. The main direction for this is so ithward blocks. The columns are of red stone, surwhere for some three miles beyond the limits of mounted each by a guided merchantman of the present developement, Government have land in old style in full sail. The columns are designed their possession and have placed at at the to resemble the historic ones erected in various disposal of the City administration,

parts of the land by Asoka and were presented by Canada, Australia, New Zealand and South The first two and fourth of these Dominions sent their own representatives to perform the ecremony of unveiling land nominated a Member of the Government of India to act in her whalf for the same purpose. The second great ceremony was the inauguration of the War Memorial. This was performed in State by His Excellency the Viceroy in the presence of representatives of every unit of the arms in India of the Royal Air Torce and of a large concourse of official and other spectators. There was a large popular fite on the ground lying below the o'd Tort and between it and the river Jumna. Their Lucellencies the Viceroy and Lady Irain arranged a programme of festivities at The Viceroy's House A New Delhi Municipal Com mittee with its own permanent official Chairman and Secretariat was established in 1932.

City Extension —The new city now, in the midst of its serson, contains a population of approximately 70 000 the maximum number odge was allocated to it for its future home for which it was designed. Of the numerous Ruling Princes who more allotted sites for The new city was the scene of notable residence, very few have set responded by auguration ceremonies in February, 1931 building. Otherwise the available residential

Freemasonry in India.

In 1728 a dispensation was granted by the Admiral Watson and Chy formal Lodge of England to Geo Pomfrett, Esq., that he resumed the duties of the majoric of authorising him to open a new Lodge in Bengal after the calamity that befell the settlement of this personage nothing further is known but under Capt Farwinter, who in the following year succeeded him as Provincial Grand Master of India, a Lodge was established in 1730, which in the Engraved Lists is distinguished by the arms of the East India Company, and is described as "No. 72 at Bengal in the East Indies." The next Provincial Grand Masters were Dawson and Zech. Gee, who held office in 1740; after whom came the Hon Roger Drake, appointed 10th April 1755 The last named was Governor of Calcutta at the time of the attack made on the

The minutes of the Grand Lodge inform as the William Mackett, Provincial Grand Master of Calcutta, was present at the materian of the body, November 17th, 1760, and we learn on the same authorsty that at the request of the "Loise in the East Indies" Mr Cullin Smith was appointed P. G. M. in 1762. At this pleriod it we the custom in Bengal "to elect the provincial Grand Master annually by the majority of the Grand Master annually by the majority of the votes of the members present, from small those who passed through the different of the of Calcutta at the time of the attack made on the times who passed through the different of the settlement by Surajah Dowlah in 1756 Drake the (Prov.) Grand Lodge and who had served missed the horrors of the Black Hole by escaping Dep Prov. Grand Master." This annual extist and was accused of deserting his post, but, as soon as notified to the Grand Lodge of English though present at the retaking of Calcutta by was confirmed by the Grand Master without.

being thought an infringement of his prerogative | there and also to grant a dispensation for holding In accordance with this practice, Samuel Middleton was elected (P G M circa) in 1767, but in passing it may be briefly observed that a few years ing it may be briefly observed that a few years expressed a wish to that effect. The Petitioners previously a kind of roving commission was grant-further requested "that his name might be ed by Earl Ferrars in 1762-64 to John Bluvitt, inserted in the body of the warrant, authorised by Earl Ferrars in 1762-64 to John Bluvitt, Commander of the "Admiral Watson," Indiaman "for East India where no other Provincial Lodge is to be found" Aliddleton's election was conis to be found." Middleton's election was con-Of the reply to this application no copy has been firmed October 31st, 1768, and, as the dispensation preserved. Lodge Benevolence was established forwarded by the Grand Secretary was looked in Bombay in 1822. apon as abrogating the practice of annual elections, he accordingly held the office of D G M Unfortunately the records of the P G L date back only to 1774, and thus much valuable information is lost to us This Grand Lodge continued working until 1792 when it ceased to It seems that the officers were selected from only two Lodges much to the dissatisfaction of the other Lodges, and resulted in most of the dissatisfied bodies seceding and attaching themselves to the Athol of Ancient Grand Lodge. In 1813 at the Union both the Ancients and Moderns in Calcutta combined and gave their allegiance to the United Grand Lodge of England and have since been working peaceably under the Provincial Grand Lodge of Bengal which was revived in that year and in 1840 created a District Grand Lodge.

Madras —The earliest Lodge in Southern India (No. 222) was established in Madras in 1752 Three others were also established about 1766 In the same year Capt Edmund Pascal was ap-pointed P. G. M. for Madras and its Dependence and in the following year another Lodge was established at Fort St George In 1768 the Athol (or Ancients) invaded this District and in 1782 established a Provincial Grand Lodge and both these Provincial Grand Rodles continued working peaceably side by side until the Union Indeed, though not generally known, these two Grand Bodies made an attempt at coalition long before any such movement was made by their parent bodies, the Grand Lodge of England, and the Ancient Grand Lodge, and Malden in his History of Freemasonry in Madras states that in a great measure they succeeded. At the Union in 1813 all the bodies in Madras gave them allegiance to the United Grand Lodge One event worthy of note was the initiation in 1774 at Trichinopoly of the eldest son of the Nawab of Arcot, Umdat-ul-Umra, who in his reply to the congratulations of the Grand Lodge of England stated "he considered the title of English Mason as one of the most honourable that he possessed " This document is now stored in the archives of the United Grand Lodge

Bombay.—Two Lodges were established in this Presidency during the 18th century, Nos 234 at Bombay in 1758 and 569 in Surat in 1798, both of which were carried on the lists until the Union when they disappeared. A Provincial Grand Master, James Todd, was appointed but Grand Master, James Todd, was appointed but there is no record that he exercised his functions and his name drops out of the Freemasons' Calendar in 1799. In 1801 an Athol Warrant was granted (No. 322) to the 78th foot which was engaged in the Maratha War under Sir Arthur Wellesley. In 1818 Lord Moria was asked to constitute a Lodge to be known by the name of St. Andrew by sloth Masone residue.

a Provincial Grand Lodge for the purpose making the Hon Mountstuart a Mason, he having expressed a wish to that effect The Petitioners ing them to instal him after being duly passed and raised a Deputy Grand Master of the Deccan"

In 1823 a Military Lodge" Orion-in-the-West." was formed in the Bombay Artillery and installed at Poons as No 15 of the Coast of Coromandel It seems from Lane's records that in 1830 it was discovered that this Lodge was not on the records of the United Grand Lodge of England. A Warrant was subsequently issued bearing date 19th July 1833. According to the early proceedings of this Lodge, members were examined in the Third Degree and passed to the chair in the Fourth Degree for which a fee of three gold mohurs was charged. In the following year a second Lodge was established at Poona by the Provincial Grand Lodge of Bengal which however left no trace of its existence. In 1825 the civilian element of "Orion" seceded and formed the "Lodge of Hope" also at Poons No 802

Here "Orion" unrecognized at home, aided in the secession of some of its members, who obtained a warrant, on the recommendation of the Parent Lodge, from the Grand Lodge of England Two years later it was discovered that no notihad reached England, nor had any fees been received, although these including quarterages had been paid into the Provincial Grand Lodge, Coast of Coromandel It was further ascertained that in granting a warrant for a Bombay Lodge the Provincial Grand Master of Coromandel had exceeded his powers Ultimately a new warrant No 598 was granted as already stated in 1833 Lodge "Perseverance" was started in Bombay No 818 in 1828 Up to this time the jurisdiction of the Grand Lodge of England in Indua had not been invaded. but in 1836 Dr. James Burnes was appointed by the Grand Lodge of Scotland, P. G M of Western India and its Dependencies No Provincial Grand Lodge Dependencies No Provincial Grand Lod however was formed until 1st January 1838 second Scottish Province of Eastern India was started which on the retirement of the Marquis of Tweedale was absorbed within the jurisdiction of Dr Burnes, who in 1846 became Provincial Grand Master for all India (including Aden) but with the proviso, that this appointment was not to act in restraint of any future sub-division of the Presidencies Burnes may be best described as being in 1836, in ecclesiastical phrase as a Provincial Grand Master "In partibus infidelium" for whatever Lodges then existed throughout the length and breadth of India were strangers to Scottish Masonry. But the times were pro-pitious There was no English Provincial Grand Lodge in Bombay and the Chevalier Burnes whom nature had endowed with all the qualities requisite for Masonic Administration, soon got to work and presented such attractions to Scottish Freemasonry that the strange sight was witnessed of English Masons deserting their mother Lodges, to such an extent that these fell name of St Andrew by eight Masons residing into abevance, in order to give support to Lodges

This new series had been rendered necessary by the natural demand for more detailed infor mation to be shown on maps, especially as regards the portrayal of hill features by contours, proper classification of communications recently—air traffic requirements and—more

It was intended that this 1905 survey should be completed in twenty-five years, and then revised periodically every thirty years Owing however to the war and more recent retrenchments only two-thirds of the programme had been completed by 1932, in spite of a reduction of scale for the

less important areas Although new surveys covering from thirty to sixty thousand square miles -- an area comparable to that of England-are carried out every year, the maps of a large part of the country are still over 50 years old, printed mostly in black only, and have hill features shewn by roughly sketched form lines or hachures, such changes in town sites, canals and communications as have been embodied in them have not been surveyed on the ground but entered from outside information

Owing to the serious financial situation in 1931, the establishment of the department was severely cut down and its annual expenditure halved, in consequence of which the modern survey of Indus cannot now be completed before 1950. The obsolescence of the present series of

modern maps of India is shewn in the second

index map at the end of this report

Large Scale Surveys —Surveys and records of international, state and provincial boundaries have always formed an important item of topographical work, and in recent years numerous Guide Maps have been published of important cities and military stations where the 1-inch to 1-mile scale is madequate

Miscellaneous - While expending on topographical and geodetic work all funds allotted by Imperial Revenues, the department is prepared to undertake or aid local surveys, on payment by those concerned, such as

Forest and cantonment surveys

Riverin, irrigation, railway and city surveys, Surveys of tea gardens and mining areas, with such control levelling as is necessary for these operations.

Administrative assistance is also given, and executive officers, lent in aid of the revenue surveys of various Provinces and States

The Printing Offices at Calcutta and Dehra Dun also carry out work for other Government departments, such as special maps, illustrations for Reports and all diagrams for patents
The Mathematical Instrument Office of this

department assists all Government departments. as well as non-officials, by maintaining a high standard of instrumental and optical equipment and by manufacturing and repairing instruments which would otherwise have to be imported from abroad

Multary Requirements and Air Survey -The department is also responsible for all survey operations required by the army, and is in a position to meet the rapidly increasing complexity of modern mulitary requirements, especially in nir Burtey

In view of its high military importance, air survey nork for civil purposes is receiving all possible encouragement and assistance, and the latest methods of mapping from photographs was constituted in 1911 with a sum of rupees

taken from the ground are being studied experimentally

The flying and photography for air mapping done by this department are at present carried out by the Royal Air Force or the Indian Air Survey Company, a commercial firm headquarters at Dum Dum

Administration is by the Surveyor General under the Education, Health and Lands Depart-

ment of the Government of India

The Headquarters Office is at Calcutta under the Assistant Surveyor General, and there are four Directors, one for the surp and other technical offices at Calcutta, and and other technical offices at Calcutta, and the five Survey of India Circles into which the country is divided, the other two Circle areas (covering Burma South India) are administered the Surveyor General personally by

Of the three Circle Directors, one also administers the Geodetic Branch at Dehra Dun in addition to his topographical survey Circle

Any enquiries regarding surveys, maps or publications may be addressed either to the Headquarters Office or to the Survey Director or Independent Party concerned, whose ad-dresses are Director, Map Publication, Calcutta, Director, Geodetic Branch, Dehra Dun, Direc-tor, Frontier Circle, Simla; Director, Eastern Circle, Shillong, Officer in charge, No 6 (South India) Party, Rangalore, and Officer-in-Charge, No 10 (Burne) Party, Angustry No 10 (Burma) Party, Maymyo

Indian Science Congress—The Indian Science Congress was founded largely owing to the efforts of Prof. P. S. Macmahon and Dr. J. L. —The Indian Simonsen These two gentlemen worked jointly as Honorary General Secretaries of the Congress. till 1921. The Asiatic Society of Bengal undertakes the management of the Congress finances and publishes annually the proceedings of the Con-gress The objects are (i) to encourage research and to make the results generally known among science workers in India, (2) to give opportunities for personal intercourse and scientific compamonship and thus to overcome to some extent one of the chief drawbacks in the life of workers in science in India, (3) to promote public interest in science; for this end the Congress is held at different centres annually, and evening lectures open to the public form an important

part of the proceedings of each Congress

The Congress, which is progressive and vigorous, meets in January each year, the proceed-The Head of the Local ings last for six days Government is Patron of the Congress, the Congress session is opened by a Presidential Address delivered by the President for the year. The President is chosen annually, the different sections being represented in turn. year. The rresident is chosen annually, the different sections being represented in turn. The sections are (1) Agriculture, (2) Physics and Mathematics, (3) Chemistry and Applied Botany, (4) Zoology and Ethnography, (5) Botany, (6) Geology, (7) Medical Research, when the sections meet separately each section is presided over by its own President also chosen annually. The mornings are devoted to the reading and discussion of the papers, the afternoons to social functions are resident. the afternoons to social functions and visits to places of interests, in the evenings public lectures are delivered.

The Indian Research Fund Association · This Association, which is a much older body than the National Research Council in England,

five lakhs (£83,000) set aside as an endowment; for the prosecution and assistance of research. the propagation of knowledge and experimental measures generally in connection with the causation, mode of spread and prevention of communicable diseases. It can claim to be amongst the pioneers in organised medical research on a large scale and has been referred to by other countries in very complimentary language. Still better, it has been copied by several other nations.

During 1929 the constitution of the Governing Body was altered by the Government of India It was considered that, in view of the largely increased activities of this Association, the Governing Body, which had hitherto most expeditiously and economically conducted the business of the Association should be now made more representative in character. It was accordingly enlarged by including two non-official members from the Legislative Assembly, one from the Council of State, two from the Medical Faculties of the Universities and one non-medical scientist The creation of a Recruitment Board in India for selecting the personnel employed by the Association and of a Consultative Recruitment Board in England also came under the consideration of Government It was further decided that the Governing Body of the of the All-India Institute of Public Health which is being built at Calcutta and of the proposed Central Medical Research Institute.

The Conference of Medical Research Workers is drawn from all parts of India and consists of experts in their particular lines of research, discussed yearly the general policy of research work in India as well as the detailed schemes which are proposed to be undertaken by the Indian Research Fund Association in the following year. The results of these discussions are available to guide the members of the Scientific Advisory Board of the Indian Research Fund Association in making their recommenda-tions for the programme, of the following year. The Advisory Board also met in December and examined all the proposals for research work and recommended a scheme of research for the guidance of the Governing Body of the Indian Research Fund Association.

The official organ of the Association is the "Indian Journal of Medical Research," which has a wide international circulation The Association also publishes "Indian Medical Research Memoirs," which are supplementary to the "Journal"

Since its inception a great number of inquiries have been carried out under the auspices of the Association and great expansion of its activities has taken place from small beginnings.

The principal inquiries are the Malaria Survey of India, which is a Central organisation, buryey of the Assauli and Karnal, plague research at the Hafikine Institute, Bombay, kala-azar by a commission in Assam, bacteriophage by Dr Asheshov at Patna, nutritional research by Colonel McCarrison at the Pasteur Institute, Coonoor, and indigenous drugs and drug addiction by Lt -Col. Chopra at Calcutta.

The Malaria Survey of India, which now enjoys international recognition, is constantly

malaria prevention in India. As part of the The Survey headquarters are in Calcutta.

activities of this organisation and in commemoration of Sir Ronald Ross' intimate association with India, an experimental malaria station was opened in Karnal in January 1927 and is known as The Ross Field Experimental Station for Malaria. Besides carrying out experiments in connection with the prevention of malaria, annual classes are held at which candidates from all over India are shown the latest methods for dealing with the malaria scourge and are instructed how these methods should be applied. In connection with the Malaria Survey of India and in order to assemble all facts relating to malaria, a new publication has been started known as the "Records of the Malaria Survey of India," of which up-to-date four number have been issued.

The programme for each year involves an expenditure of Rs. 10 lakhs or more and the

institution of 40 or 50 investigations. Geological Survey — The ultimate aim of the Geological Survey of India is the preparation of a geological map of India upon the accuracy of which the solution of most geological prob-iems ultimately depends Maps accompany the reports on the various areas in the publicatious of the Department and a large amount of information is made available to the public Such maps represent pioneer work which enables Indian Besearch Fund Association should be the prospectors and mining engineers to cut short co-ordinating agency for the research activities their preliminary investigations and to start where the Geological Survey has left off. During the preparation of the geological map and the general survey of the country, mineral deposits of importance are sometimes discovered. Such discoveries are published without delay and every endeavouris made to induce private firms to take up the exploitation of the mineral discovered. Collections of minerals rocks and fossils are accumulated and exhibited in the public galleries of the Indian Museum, situated in Calcutta. Some of the most interesting and scientifically valuable additions to the collections in recent years have been the remains of anthropoid apes of great age discovered at different places in the Siwalik Hills, a range which for hundreds of miles runs parallel the Himalayas, at a short distance below the foot hills of the latter, and is largely composed of Himalayan detritus The Geological Survey helps in the spread of geological education in India by the presentation of mineral, rock and fossil specimens to educational institutions The knowledge gained concerning the geological structure of India and the composition of the rocks that compose the strata enables the department to help in the solution of engineering problems connected with the selection of sites for dams for reservoirs, the safety of hill slopes and the suitability of particular building stones for particular purposes The Department is also often able to advise on problems concerned with the supply of water As a result of the knowledge gained concerning the structure and disposition of the mineral deposits of India, the Department is also in a position to give advice concerning the conservation of the advice concerning the conservation of the mineral resources of the country. The Geological Survey also undertakes the examination and tion by Lt. Col. Chopra at Calcutta.

The Malaria Survey of India, which now enjoys international recognition, is constantly The publications of the Survey include the called upon to advise as to the best methods for Memoirs, Records and Palsontologia Indica.

# Posts and Telegraphs.

#### POST OFFICE.

whose office is attached to the Department of Industries and Labour of the Government of For the efficient working of the Department a representative of the Finance Deptt —the Financial Adviser, Posts and Telegraphshas been attached to the office of the D. G. P. The Financial Adviser not only controls the finances of the Dept but also assists the D G generally in examining matters containing financial implications in which the former is assisted by the Deputy Director-General, Finance The superior staff of the Direction, in addition to the Director-General himself, consists on the postal side of one Senior Deputy Director-General, one Deputy Director-General (postal services), five (including one temporary) Asstt Deputy Director-General and one Personal Assistant to the Director-General

For postal purposes, the Indian Empire is divided into nine carcles namely, Bengal and Assam, Bihar and Orissa, Bombay, Burma, Central, Madras, Punjab and North-West Frontier, United Provinces and Sind and Baluchistan Each of the first eight is in charge of a Postmaster-General and the Sind and Baluchistan Circle is controlled by a Director, Posts & Telegraphs. The Central Circle comprises roughly the Central Provinces Central India and Rajputana the Agencies.

The Postmasters-General are responsible to the Director-General for the whole of the postal arrangements in their respective circles, including those connected with the conveyance of mails by railways and inland steamers All the Postmasters-General are provided with Deputy and Assistant Postmasters-General. The nine Postal Circles are divided into Divisions, each in charge of a Superintendent of Post Offices or Railway Mail Service as the case may be and each Superintendent is assisted by a certain number of officials styled Inspectors

The control of the Posts and Telegraphs Bombay, and Madras General Post Offices of India is vested in an officer designated and of the larger of the other head post offices Director-General of Posts and Telegraphs are directly under the Postmasters-General The Presidency Postmasters have one or more Inspecting Postmasters subordinate to them When the duties of the Postmaster or a head office become so onerous that he is unable to perform them fully himsef a Deputy Postmaster is appointed to relieve him of some of them, and if still further relief is required, one or more Assistant Postmasters are employed. The more important of the offices subordinate to the head office are designated sub-offices and are usually established only in towns of some importance Sub-offices transact all classes of postal business with the public, submit accounts to the head offices to which they are subordinate incorporating therein the accounts of their branch offices, and frequently have direct dealings with Government local sub-treasuries. The officer in charge of such an office works it either single-handed or with the assistance of one or more clerks according to the amount of business.

> · Branch offices are small offices with limited functions ordinarily intended for villages, and are placed in charge either of departmental officers on small pay or of extraneous agents, such as school-masters, shopkeepers, land-holders or cultivators who perform their postal duties in return for a small remuneration.

> The audit work of the Post Office is entrusted to the Accountant-General, Posts and Telegraphs, who is an officer of the Finance Department of the Government of India and is not subordinate to the Director-General The Accountant-General all of whom with the Accountants-General, all of whom, with the necessary staff of clerks, perform at separate head-quarters the actual audit work of a certain number of postal circles.

In accordance with an arrangement which has been in force since 1883, a large number of sub-post offices and a few head offices perform telegraph work in addition to their postal work Generally there is a head post office at the head-quarters of each revenue district and other. The policy is to increase telegraph facilities post offices in the same district are usually everywhere and especially in towns by opening subordinate to the head office for purposes a number of cheap telegraph offices working of accounts. The Postmasters of the Calcutta, under the control of the Post Office.

## Sanitation.

CZCZCUL

For every story of the sanitary departments in that weight ack for about sixty years. During Samples—1) and improvements have been anna per 2 ouncer taltary condition of the towns, name to be done; but the prosanitation which involves the

Parcel pothe great bulk of the population has as shown s, and incommensurate with the thought in the abour bestowed on the subject. "The relatin lies in the apathy of the people and the fenacity with which they cling to domestic customs injurious to health. While the inhabitants of the plains of India are on the whole distinguished for personal cleanliness, the sense of public cleanliness has ever been wanting. Great improvements have been effected in many places; but the village house is still often ill-ventilated and over-populated the village site dirty, crowded with cattle, choked with rank vegetation, and poisoned by stagnant pools, and the village tanks polluted, and used in-discriminately for bathing, cooking and drinking That the way to improvement hes through the education of the people has always been recognised "

Of recent years the pace has been speeded up as education progressed, education develop-ed, and funds were available In a resolution issued in May 23rd, 1914, the Government of issued in may 25td, 1914, the Government of India summarised the position at that time, and laid down the general lines of advance. This resolution (Gazette of India, May 25th, 1914) should be studied by all who wish to understand the attitude of the Government of India towards sanitation prior to the passing of the Reform Act of 1919 It will be found summarised in the Indian Year Book of 1922 (page 475 et seq ) and earlier editions One of the greatest changes effected by the Reform Act of 1919 was the transfer of sanitation to the provinces making it a subject directly responsi-ble to local control through Ministers It is yet too early to attempt to indicate the effects of this change

The Public Health Commissioner with the Government of India in a general review of health organisation in British India which he laid in January, 1928, before the Interchange Study Tour organised for Medical Officers of Health from the Far Eastern Countries by the Health Organisation of the League of Nations, concluded "that the State effort in regard to Health Organisation in British India is one of no mean importance, that it has evolved over a couple of centuries during which many mistakes in policy must be admitted, that it has provided the Officers and the stimulus necessary for laying the foundations of medical edu-cation, that it has tried to uphold the ethical standards of western medicine and that in whichever way it is regarded it is an effort of which no Government need be ashamed " He quoted, the remark of the Government of India in their Resointion of 1914 that "in the land of the ox eart is likely to be urged in the course of the revision one must not expect the pace of the motor car." of the Constitutional Reforms now in progress.

The Public Health Commissioner in his annual report for the year 1925 noted the introduction of the political element into health matters as a result of the Reforms and said that the improvements being introduced before the Reforms were in some provinces now in a fairway to maturing but that in other provinces "with less appreciation of the actual needs so far from adding to the organisation as they have found it have shown a desire to scrap even some of what they originally possessed. But, he says, "though the picture is neither bright nor the future rosy, it is becoming increasingly evident that a considerable section of the Indian community is thinking seriously on these public health problems amid much futile and destructive criticisms of State and municipalefforts here and there valuable and suggestive criticism can be met with which goes to prove my contention

India's birth rate in 1925 was nearly twice that of England and Wales, her death rate was twice that of England and Wales and nearly three times that of New Zealand and her infantile mortality rate was nearly 2; times that of England and Wales and nearly 4; times that of New Zealand. "The information furnished for the great group of infectious diseases of world import, 16., plague, cholera small-pox, yellow fever, typhus, malaria, and dysentery shows (says the Public Health Report already cited) that if we except typhus and yellow fever, India is one of the world's reservoirs of infection for the others and the main reservoir of infection for plague and cholera." The significant of the reservoir of the significant finection for plague and choice finese facts must, adds the Commissioner, be obvious to all who think their implication is that India's house, from the public health point of view, is sadly out of order and that this disorder requires to be attended to It is not for India to say that so far as she is concerned prevention is impossible If we think of the effect of sunlight on tubercle ridden children, of the effect of feeding on rickets, scurvy and ben-ben, of the way in which malana, cholera, yellow fever, dengue, ankylostomiasis and filariasis can be and have been overcome we need have-no fear in regard to India provided the necessary measures are put into operation."

The Public Health Commissioner in an address before the annual congress of the Far Eastern Association of Tropical Medicine, held in Calcutta in December, 1927, urged the importance of instituting a Central Ministry of Health which should be charged with the functions of or the departments concerned in the several provinces and with keeping them abreast of scientific progress. There is at present no public Health Act for the whole of India, nor under existing administrative arrangements is one immediately possible, but the desirability of the Central Ministry of-Health and of such an Act is likely to be urged in the course of the revision

The Commissioner in his annual report to any modern brite to work to and which are a

Government for 1927 gave at the outset follows— the following text for thought "Whether the institution of a Ministry of Health, which; (a) age; many of us think is long overdue for the Indian of the (a) assistainment and accurate registerios of the data obtainable. Empire, nould accelerate procress is a matter of opinion, but there can builtle doubt that such, (b) the criabil blue of a definite standard to s ock to, this should be tased or health and this lology and not of disease of progress must depend not on a haphrened pro gramme or on the fulfilment of an annual routine ! er illeure: of measures sanctified by tradition but father on the acceptance of such cardinal principles as have been hid down by the Chief Vedical Officer of the British Ministry of Health in his 1927 report and by a genuine attempt to work to these—Sir George Newman points out that Nothing is more certain than the fact that the (c) the study of the character ar I believe of dieres, it expected predictoris, multitaris its made of special, its escal factoris which increase or reduce it and the the see of les treaters it and treatesting physical advancement and health of insulind is dependent not upon a doctor's stunt here or a sanitary institution there but upon the whole, (d) the establishment of a national reserva tion he the area of of joining of clar, and on, and on, and when the grat is dex of the artical social evolution of the propie. Now, there desired ends are not resched mercie b, announce tions and cult. hererent of the reap e desired ends are not reached merely by announce, only them, still leastly leaving things to chance, the for conditions that it is a far we in least drift or fals. There can in any case only be an non-yorking to these take principle of an partly reached at all without fore disht, organisatility to be the feture and visites over existing the analysis of the feture and visites over existing the dark of the principles which it is necessary for enable who do this."

Among officers of the British Army in India 468 2 per thousand of strength were admitted to hospital during the year compared with 420 4 in 1931 There were 15 deaths, giving a ratio of 6 54 per thousand, compared with 18 and 7 76 in 1931 The average constantly sick in hospital was 38 75 or 16 88 per thousand of strength as compared with 15 11 in the preceding year. The total constantly sick, in hospital or out of hospital, on account of disease and injury was 27 94 per thousand

Of British soldiers 32,177, or 581 5 per thousand were admitted to hospital compared with 647 per thousand in 1931 and 580 5 per thousand in 1913 There were 1,646 soldier deaths or 2 96 per thousand of the strength compared with 2 76 per thousand in 1931 The most important causes of mortality among soldiers were —

		•	
Local injuries	•	-	27
Pneumonia			27
Enteric group of fevers			14
Heat stroke	••		12
Appendicitis	••		11
Heat exhaustion			6

The number, sent home as invalids was 409 or 7 39 per thousand of the strength, compared with 544 or 9 74 per thousand in 1931.

Among women and children (British Other Ranks) 1,262 women or 292 3 per thousand of the strength were admitted to hospital compared with 1,395 or 384 4 per thousand in 1931 Of the children, 1,999 or 299 1 per thousand of the strength were admitted to hospital, compared with 1,896 or 286 4 in 1931

The principal cause of sickness among British troops was malaria of which there were, 4,654 cases, a decrease of 1,628 compared with 1931 The year's report by the medical authorities remarks, "In 1932, in India, the British troops lost about 32,568 days spent in hospital on account of malaria alone—a matter of serious economic importance to the State. The hard fact is that we know well how to deal with the malaria problem, but we have not the funds with which to put our knowledge to adequate practical use"

The admission rate of officers sick in hospital | thousand in 1931 for 1932 was 321 8 per thousand of strength as compared with 367 4 in 1931 Among soldiers death rate among Indian soldiers during 1932 52,017 or 429 8 per thousand of strength were, admitted to hospital, compared with 451.3 per thousand in 1931.

There was thus a decrease

#### LEPROSY IN INDIA.

It is exceedingly difficult to give anything approaching an accurate estimate of the total number of lepers in the Indian Empire to-day In 1921, when a Census was made, leprosy was regarded as an unfirmity like blindness, insanity and deaf-mutism and the supposed number of lepers was tabulated along with The number counted was 102,513 as against 109,094 in 1911. But it was recognised doubtful if this figure represented anything more than the more advanced cases and that possibly a majority of this number were the begging and pauper lepers who are seen all over the country. Dr. E. Muir, M.D. F. R.O.S., the Leprosy Research Worker at the Calcutta School of Tropical Medicine, said that "recent figures obtained from a carefully conducted but limited survey, tend to confirm the computation that there are roughly from a half to one million Deople in India suffering from leprosy "

Early in the year 1924, the British Empire Leprosy Relief Association was constituted in England with H. R. H. The Prince of Wales as Patron, the Viscount Chelmsford as Chairman of the General Committee and H. E. the Viceroy of India as one of the Vice-Presidents Following its formation and in view of the good results being obtained from the newest treatment of leprosy, H. E the Viceroy felt that the time was auspicious for the inauguration and carrying on of an earnest campaign with the object of ultimately stamping out leprosy from India.

His Excellency invited certain gentlemen representing various interests to form an Indian Council of the Association, which he formally maugurated at a public meeting in Delhi on the 27th January 1925

A general appeal for funds in aid of the Assocuation was issued by His Excollency the Viceroy on the date of the mauguration of the Indian Council which was closed after a year with realizations amounting to over Rs 20,00,000 which was invested in the end of 1928. The investments amounted to Rs 20,63,065 yielding an annual revenue of over Rs 1,22,000.

In the scheme of anti-leprosy campaign which the Association put into operation. the respective parts to be played by the Central and Provincial Committees in carrying forward the aims and objects of the Association are definitely apportioned The Central Committee is vested with the task of promoting research, of preparing and publishing propaganda material, arranging for the training of doctors in the diagnosis and treatment of leprosy according to the latest methods and of conducting an expert survey of selected areas for the ascertainment of the facts regarding the incidence and endemicity of leprosy. Measu-res for the accommodation and treatment of leprous patients and other schemes of purely local interest are to be the concern of provin-cial committees as agents of the Indian Council in the Provinces.

The policy and principles of the British Empire Leprosy Relief Association, Indian Council, with regard to provincial committees are expressed in its "Memorandum on the method of conducting the anti-leprosy campaign in India" which was published in 1926 This document sought to bring out the following main points which according to the latest scientific researches should be the basis upon which all efforts ultimately to eradicate leprosy must rest—

- (1) Pauper lepers form only a small fraction of the leper population, and the disease is common among all classes of the community
- (2) Segregation is not the most appropriate method of dealing with lepers, for
  - (a) financially it would be impossible.
  - (b) any attempt to impose forcible segregation would drive patients, particularly those who are suffering from the earlier stages of the disease; to conceal their misfortune, and, as has been the case where such means have been adopted, only the more advanced and obvious lepers would be segregated.
- (3) The majority of the advanced cases are not highly infectious and are less amenable to treatment, while the early cases in which the disease has made but little outward manifestation, can be controlled by treatment
- (4) The strongest hope of stamping out the disease lies in providing facilities for the treatment of early cases.

The Indian Council, therefore, while it did not desire to minimise the usefulness of homes and asylums for the care of lepers, strongly recommended that the efforts of the Provincial Com-

mittees should, for the present at least, be concentrated upon the establishment of dispensaries to serve the following objects:—

- (a) to induce patients to come forward at an early stage—in the hope of recovery instead of hiding their malady till it becomes more advanced, more infectious and less remediable; and so
- (b) to shut off the sources of infection as the number of infectious cases will continually tend to diminish and the opportunities for infecting the next generation will become fewer.

The Governing Body of the Indian Council in their report for the year 1933, show that the Association's main work during the completed nino years of its life has been organisation and planning and the outlining of a programme of work varied by the selection of the most fruitful soils for experimentation in methods of work. One valuable product during theat period is the fact that "the leper is becoming less prong to hide his disease and there is an increase of general interest in the subject"

There are now seventeen provincial branches, including one in Mysore State and each of them has established treatment centres for leprous patients. In Assam, for instance, the number of clinics rose from 81 in 1932 to 145 at the end of 1933. Many clinics in different parts of India report absolute cures of the disease

His Excellency the Viceroy is the President of the Indian Council, Maj Gen C A Sprawson, CIE, KHP, INS, Director General of the INS the Chairman of the Governing Body, Sardar Bahadur Balwant Singh Puri, the Honorary Secretary and Sir Ernest Burdon, Kt, OSI, CIE, the Honorary Treasurer.

#### **BLINDNESS IN INDIA**

All over the East, and in fact in most tropical and sub-tropical countries, blindness is very prevalent, and only of recent years have people begun to realise that much of this blindness can be relieved, and still more of it, if not most of it, could, with proper measures taken, be prevented In Egypt, renowned for its sufferings from blindness, it was a gift of some £43,000 made by Sir Ernest Cassel at the beginning of this century that was the initiation of that fine ophthalmic service, which began under the guidance of Mr MacCallen, has now spread all over the country and gives medical treatment to three or four hundred thousand patients Africa, Turkey, Northern India and China are all countries where there is a very high incidence of blindness and suffering from eye disease, and where western medicine has not yet penetrated sufficiently deeply to make much impression on the mainly rural and illiterate populations. There is a great "trachoma belt" extending from China into Eastern Europe stopped only from spreading all over the West by the higher standard of living, sanitation and cleanliness which the European nations have attained

India is in this great Blindness Belt. According to the last census returns there are 480,000 totally blind persons in this population of more

than 300 millions. That is an incidence of 1½ totally blind to every thousand of the population. But the census figures are notoriously defective, and in several districts a special count has been made of the totally blind, and wherever this has been done, the census figures have been found to be much too low. Thus in the Nasik district an incidence of at least 4 38 per thousand was found as against the census figure of 1.74. In Ratnagiri an incidence of 1.5 was found as against the census figure of 0.7, in the United Provinces a Deputy Commissioner had a count made and found no less than 9 per thousand In Palanpur 7 per thousand was found If, as is not unlikely, this sort of error of underestimation in the census report is general, then it is not unreasonable to suppose that the real number of totally blind persons in India is more like 1½ millions than the half million shown in the census returns.

These are the figures for total blindness and they by no means give the full picture, for they include only totally blind of both eyes and say nothing of the much greater number who, from neglected eye diseases, are partially or even nearly blind, and whose happiness and efficiency are thus greatly impaired The term "blindness" has a different interpreta-

tion in every country In a report on the Prevention of Blindness, published by the League of Red Cross Societies these different interpretations are shown In the United States blindness is defined as "inability to see well enough to read even with the aid of glasses, or for illiterates, mability to distinguish forms and objects with sufficient distinctness"; and in Egypt a person is accounted blind who cannot see fingers at a distance of one metre. If such persons were counted in our statistics of total blindness in India, there is little doubt that the figure would be very much larger than those indicated above Recently the All-India Blind Relief Association has made an analysis of a very large number of patients attending its camps and dispensaries, and has found that among these patients for every totally blind person there are three with more or less damaged vision, the result of eye disease. It appears not unlikely that the true ophthalmic condition of India would be represented by figures showing one and a half million totally blind persons, and in addition to these four and a half million with more or less impaired eyesight

"No one," says Col\_R H Elliot, late of the Madras Ophthalmic Hospital, writing in the British Journal of Ophthalmology of May 1919, "who has not worked in India can form any conception of the enormous amount of preventable and curable blindness which is laying its shadow over the health, happiness and useful-ness of this great portion of our Empire", and the same writer in another place has said —
"It is difficult for anyone who has not had first hand experience of medical practice in the East to realise the state of things out there granular ophthalmia claims its victims by the ten thousand, whereas it is really a disease which, when properly treated at an early stage, should not cause the loss of a single eye. The neglect of patients suffering from small-pox and other febrile conditions leads to a vast amount of blindness, while the treatment of mild ocular affections by irritant drugs is probably one of the most evil factors that spread blindness broadcast throughout the land Large numbers of men and women suffering from glaucoma, from cataract and from other curable diseases, are allowed to hide in their villages like wounded animals, waiting only their release by death This is not an overdrawn picture—It is a state-ment of cold, hard, cruel facts, well known to everyone who has practised or is practising medicine in the East"

In an editorial on the Ophthalmic work in Egypt and the possibilities of similar work in India, the Indian Medical Gazette (March 1928) remarks —"It would seem worth while for the Government of India to examine the working of this splendid organisation, for, in spite of the fact that workers in India have always been in the front in advances in ophthalmology, there has been little organised work in ophthalmic research except in Aladras, even there the work has been done by men who have already a large amount of routine work to perform India as a whole owes its position in the ophthalmic world entirely to the energies of individual enthusiasts, whose names are so well known that it is not necessary to mention them. What

in India and it would appear that the first step should be the establishment of Schools of Ophthalmology, in places like Madras and Calcutta where ample facilities exist At these schools advanced teaching and research in ophthalmology would be carried out, and the next step would be to organise a system of ophthalmic relief at selected centres all over India" (There are now schools of ophthalmology at Madras, Bombay, Calcutta, and Lahore).

Again in an editorial from the same journal (Sept 1929) the following statements are made-"What is wanted is some large organisation covering the whole of this sub-continent and aiming chiefly at Prevention rather than treatment In brief what the position now calls for is an all-India movement. Obviously the main question is one of general public health Public health is a transferred department, but if the Health Department of the Government of India interests itself in the matter in co-operation with missionary and voluntary movements, we do not despair of seeing an all-India organisation created and built up "

Associations known as "Blind Relief" Associations have been working for several years in Western India, in conjunction with Government hospitals, to alleviate this affliction of blindness The number of eye doctors in India is notoriously small and those there are stay mostly in the large towns The Associations work by means of travelling hospitals, which bring relief to the villages in the rural areas They also work by means of trained village workers, whose duty it is to find out the "hidden blind" and get them to the reductions of the relief to the state of the reduction of the relief them. and get them to the medical centre for relief, to find out cases of small-pox (a constant source of blindness in children), to inspect new born children for the detection of ophthalmia neonaforum, to keep registers of all blind and partly blind persons and persons suffering from eye disease; and to treat in the villages simple cases of conjunctivitis or sore eyes their inception the Associations have been the means of restoring sight to thousands of blind people and of preventing blindness in many thousands more The work is capable of indefinite extension and the need for some such organisation has been shown In 1917 Colonel Elliot wrote as follows, "To me it seems that the duty and privilege of undertaking this work he with the State, and that no sum spent on such a task could be too large Unfortunately this is not the view that has been taken by those in authority and consequently we see the spectacle of private enterprise endeavouring to under take this colossal task It is at least permissible to voice an admiration for the stand taken by Mr Henderson [Founder of stand taken by Mr Henderson [Founder of the Blind Relief Association movement, who began the work in 1913] The best that one can hope for his can hope for his endeavour is that he will succeed in arousing the conscience of educated Indians to the needs of their less fortunate countrymen, and that this little cloud, no bigger than a man's hand, will end in a monsoon of active effort". world entirely to the energies of individual and an entirely to the energies of individual and the control of the energies of individual and the control of the energies of entirely and the control of the energies of energies of entirely and the control of the energies of entirely and the energies of entirely and the energies of entirely and the energies of entirely and the energies of entirely and the energies of entirely and the energies of entirely and the energies of entirely and the energies of entirely and the energies of entirely and the energies of entirely and the energies of entirely and the energies of entirely and the energies of entirely and the energies of entirely and the energies of entirely and the energies of entirely and the energies of energies of entirely and the energies of ener

mology in India, and the Government eye hospitals are doing tremendous work, but these hospitals are situated in the large towns and cannot possibly by any stretch of imagination, give relief to the millions living in the rural areas

The All-India Blind Relief Association.—
(The Green Star Society) exists to co-ordinate and centralise the various Associations in the mofussil and to extend their work. It is under the patronage of the Governor of Bombay, and has for its life President, Mr. C. G. Henderson (late I. C. S.) who founded and managed for many years all the branch Associations working in Western India. It is affiliated to the International Association for the Prevention of Bindness, which has its headquarters in Paris and was formed on September 14th, 1929, under the auspices of the League of Red Cross sion—their sight.

Societies and the American Society for the Prevention of Blindness The Organising Secretary is R. Crawford Hutchinson, The Town Hall, Bombay

A beginning has been made, but it is only a beginning, and it is but the fringe of this wast problem that has been touched. The schools of ophthalmology in India are turning out ophthalmic surgeons who are crowding their profession in the cities and large towns. A scheme for taking these men and placing them in selected centres has been worked out, all that is required is monetary help. The cost is minimal and here is an opportunity for the generous and public spirited to emulate Sir Ernest Cassel, and give to India an eye service of which India and the whole world could be proud, and to the peoples of India that which to them is probably their most precious possession—their sight.

#### THE MATERNITY AND CHILD WELFARE MOVEMENT.

Amongst the most pressing problems of India's health is that presented by the appalling maternal and infant mortality. The figures for maternal mortality are not accurately known, but they are certainly not less than 10 per thousand live births, often more. It has been calculated that every year no fewer than 2 milhon Indian babies die, while many others survive only to grow weak and feeble from unhygienic surroundings during infancy A noteworthy feature has been the further progress of the infant welfare movement, which owes much to the All-India Maternity and Child Welfare League intuated by Lady Chelms-ford and also to the Indian Red Cross Society, which aims at gradually establishing a network of child welfare centres in most of the The amalgamation of larger towns in India these two Bodies which has taken place, forming the Maternity and Child Welfare Bureau, will undoubtedly increase and develop the In all the great centres of population, work in an one great canters or population, word is now being done for the training of midwives, for the instruction of mothers and for the care of bables Training centres for Indian and Anglo-Indian women have been opened in order to spread the elements of mant hygiene to other parts of Indian Most heavily says of all Indian ledies are becoming hopeful sign of all, Indian ladies are beginning to interest themselves in this work in large numbers. But such is the magnitude of the field, that a consistent widespread effort on a scale hitherto impossible must be undertaken, if any appreciable reduction is to be made in the appalling mortality of young children

Centres of Activity are organised on a provincial basis, though the various provinces differ considerably in the nature of the work undertaken and the amount of organisation displayed. It is noteworthy that the work is most co-ordinated and most energetically carried on where there are persons appointed under the Directors of Public Health whose special duty it is to foster Child Welfare activities.

The care needed by the wives and children of sepoys in the Indian Army is being

increasingly realised, and nowhere more than in the units themselves. The result has been, in the last few years, the opening of much work in this direction. Much of it is purely medical work, which, in the absence of families hospitals for the Indian soldiers, is a necessity. But genuine child welfare activities are also present in some centres many of them assisted by the M & C W Bureau Indian Red Cross Somety which has undertaken the organising work in place of the Lady Birdwood Army Child Welfare Committee. A remarkable feature of this movement is the keenness of the men themselves to aid it, realising as they do the benefit to their own women and children. There are now very few cantonnents where some work of this kind is not going on

So far all the schemes have devoted their attention to educating women in the elements of mothercraft and attempting to preserve mant lives and improve child health. In a land of so many languages and superstitions progress will necessarily be slow and India has yet to decide whether she will work intensively and try to rear a few well developed children as far as adolescence or extensively attempt to bring a large number of infants through the first critical months, only to have them perish at a later stage from the many ills that childhood is heir to in a land of great poverty, under-nourishment, epidemics and famine. In Western lands the Child Welfare Movement has no more marked characteristic than its inability to stop expanding. Its ramifications know no bounds Its mevitable corollaries are endless, and like the banyan tree it will no doubt in India also develop innumerable fresh roots, medical supervision, dental clinics, better housing, open air playgrounds, etc., etc. But these are not yet its preliminary task is to educate the mothers of India to the enormity of allowing two million bables to perish every year and to convince them of the equally important fact that a high death rate always spells also a high damage rate of sickly, under-developed, incompetent citizens

#### St. JOHN AMBULANCE ASSOCIATION

#### (Indian Council.)

founded in 1877, by the Order of the Hospital of St John of Jerusalem in England, and has tation for its objects -

- First Aid in cases of accident or sudden illness and in the transport of the sick and injured,
- (b) The instruction of persons in the elementary principles and practice of nursing, and also of hygiene and sanitation, especially of a sick room,
- (c) The manufacture, and distribution by sale or presentation, of ambulance material, and the formation of ambulance depots in mines, factories, and other centres of industry and traffic,
- The Organisation of Ambulance Corps, Invalid Transport Corps, and Nursing Corps,
- (e) And generally the promotion of instruction and carrying out of works for the relief of suffering of the sick and injured in peace and war independently of class, nationality, or denomination

An Indian Council of the Association was constituted on a regular basis in 1910 It has since assued over 200,000 certaficates of proficency in First Aid, Home Nursing, Home Hygiene and Sanitation and over 10,000 tokens such as Vouchers Medalhons, Labels and Pendants for special proficiency in those subjects The object of the Association is not to rival, but to aid, the medical man, and the subject-matter of instruction given at the classes qualifles the pupil to adopt such measures as may be advantageous pending the doctor's arrival, or during the intervals between his visits

The St John Ambulance Association was certificates 10, 12,869 in First Aid, 584 in funded in 1877, by the Order of the Hospital Home Nursing, 451 in Hygiene and 53 in Sanif St John of Jerusalem in England, and has it its objects—

(a) The instruction of persons in rendering irst Aid in cases of accident or sudden illness and in the transport of the sick and injured, 1932 to expect the sick and injured, 1932 to expect the sick and description of the sick and injured, 1932 to expect the sick and description of the sick and injured. 1933 to arrange first aid courses for the personnel of flying clubs, but the response was poor

> The Association has five grades of members, namely, Patrons, Honorary Councillors, Life Annual Members and Annual Associates Their respective subscriptions Rs 1,000, Rs. 500, Rs 100, Rs 5, and Rs 2

The income of the Indian Council at headquarters consists primarily of interest on securities, a fixed annual grant from Government, fees for certificates and membership subscriptions. The total income for 1933 was Rs 17,897, a more or less normal figure Management expenses amounted to Rs 22,413 After adjusting assets and habilities outstanding the revenue account for 1933 showed a loss of Rs 6,305 The Council was able to carry on by taking a loan of Rs 7,000 from the Indian Red Cross Society and by buying much less stores than it sold, the balance of stores stock thus being reduced by Rs 11,000 The Council realise that the financial position and its maintenance by temporary expedients is unsatisfactory

Their Excellencies the Vicercy and the Countess of Willingdon and His Excellency the Commander-in-Chief as President, Lady President and Chairman, respectively, with 17 members form the Indian Council The general business of the Indian Council is conducted by an Executive Committee of which the Hon'ble During the year 1933 22,853 persons attended Sir David Petrie, Kt, OIE, OVO, OBE, is 1.583 courses of instruction in First Aid, Nursing the Chauman, Miss Norah Hill, ARRO, the Home, Home Hygiene and Sanitation and of General Secretary, and Sir Ernest Burdon, these 13,957 qualified for the Association's Kt,OBI,OIE,108, the Honorary Treasurer

#### INSANITY AND MENTAL HOSPITALS IN INDIA. -

The accommodation for the treatment in ] British India of persons who suffer from mental disorders is still very inadequate In the Insortiers is sun very materiales. In the Indian States, the condition of affairs is even worse, for, with the sole exception of Mysore State which has a small and highly archaic "mental hospital" at Bangalore, there are no mental hospitals in existence so that persons suffering from all forms of mental disease are confined in the Jails where, of course, no provi-sion exists for any kind of treatment According to the last Census (1931) out of a total popula-

tion of 352,837,778 (India and Burma) there are 120,304 persons insane, making a proportion of insane to sane of 3 per every 10,000 In the United Kingdom the proportion of insane to sane is roughly 40 per 10,000, while in New Zealand it is as much as 45 per 10,000. In reviewing these figures it must be borne in mind that those of the United Kingdom and New Zealand include the "feeble-minded" an item that is not included in the figures for British India:

INDIA.

Provinc	es, Stat	es			Insane population			
and .	and Agencies.		and Agencies.		Males.	Females.	Total.	Total.
British India Indian States	••	••	•	139,931,55β 41,897,867	131,595,877 89,413,478	271,526,933 81,310,845	} 120,304	
Tot	al for a	ll India		181,828,928	171,008,855	352,837,778	120,304	

For the care of the 120,304 insanes of India and Burma there exists accommodation in mental hospitals for 9,244 hence only one person in eight out of the total insane population can obtain accommodation in institutions which exist

especially for their care and treatment.

The following table gives the number of mental hospitals in each province during 1927, the total population of each institution and the number

discharged cured and died —

Total	••	18	3,048			11,040	••	636	8,305.67	656.71	2,601

It will be observed that there is now no mental hospital in Bengal. Insanes from this province are treated in one or other of the two mental hospitals at Ranchi. All Mental hospitals are under the direct control of the Provincial administrative medical officers except the European Mental Hospital at Ranchi which is controlled by a Board of Trustees presided over by the Commissioner of Chota-Nagpur The socialled "Central" Mental Hospitals, that is to say, the Mental Hospital at Madras, North Yeravda (Bombay), Lahore (Punjab), Agra (United Provinces of Agra and Oudh) and Rancoon (Burma), as well as the two Mental Hospitals at Ranchi (one for Europeans and Americans and one for Asiatics and Africans) are administered by whole-time medical officers who are usually trained alterists. The Administration of the remaining Mental Hospitals in British India and Burma hes with the Civil

Surgeon of the locality in which they happen to be situated. It is probably true to state that only one Mental Hospital in the whole of India can claim any pretension to be up-to-date as regards organisation, staffing and equipment and that is the Mental Hospital for Europeans at Ranchi. All the others are for the most part over-crowded and under-staffed, thus rendering anything approaching treatment on modern lines out of the question. The only province in India which has so far displayed some appreciation of the importance of bringing the prevention and treatment of mental disorders into line with conditions in civilised countries is Madras. The local Government of this province has achieved a notable advance in its attitude towards mental disorders by providing, in the construction of the new General Hospital at Madras, accommodation for the treatment of early cases of mental diseases.

As regards the incidence of insanity among the various races of India as well as the incidence of insanity in relation to occupation, no reliable information is available in view of the comparative paucity of cases in proportion to the general

population that come under observation. the other hand the incidence by age is shown fairly well in the Census Report of 1921 which is as follows -

#### INDIA.

		AGE	•			Ins	sane	Distribution of sane by age per of each sex.

A further result of the widespread ignorance and apathy both official and non-official, towards psychiatry and its cognate interests, is the lack of any provision for the care and treatment of mentally defective children In 1925, the Hon'ble Haroon Jaffer moved the Council of State to recommend to the Governor-General in Council that the Provincial Governments be asked to investigate the best means of dealing quickly and adequately with cases of mental defectives. A discussion followed which was defectives remarkable only for the ignorance of the subject displayed by all who took part in it The motion was eventually withdrawn
Finally there is still a lamentable failure

everywhere to appreciate the intimate associa-

tion of crime with mental disorder and the extreme paucity of medical men throughout the whole of India with any real knowledge of mental diseases leave the decision of questions involving what the law terms "responsibility" in crime in the hands of medical men who are in no sort of sense "experts". In other words the current ideas both as regards the theory and practice of dealing with insanity and crime in India can only be described as archaic

(See also "Insamty in India" by Colonel G. F. W. Ewens, I.M.S., and "Lunacy in India" by Colonel A. W. Overbeck-Wright, M.D., D.P.E., I.M.S. and Colonel H. P. Jago Shaw's hook )

# National Association for Supplying Medical Aid by Women to the Women of India.

But the Council reserves the power to promove a medical man and two medical women in charge of hospitals who, for the council and the Chief produce a certificate of health and character. But the Council reserves the power to promove to the Service are required sub-committees perform the duties of a medical capacity. Members of the Service are required. sub-committees perform the duties of a medical capacity liembers of the Service are required board examining candidates for physical fitness, to engage for duty anywhere in India. After and for return to duty after invaliding.

The Council determines what proportions of the members of the Service is to be recruited in England and in India respectively. In the original constitution of the Service,, duly qualified medical women who are in the service of, or who have rendered approved service to, the Countess of Dufferm's Fund, are to have - the first claim to appointment, and thereafter consideration is to be paid to the claims of candidates who have qualified in local institutions and of those who are natives of India

Qualifications -The qualifications that the candidate must be (a) a British subject resident in the United Kingdom or in a British Colony or in British India, or a person resident in any territory of any Sative Prince

This Service is included in the National Assos or Chief under the suz rainty of His Majorty one year of probation has been satisfactorily passed their appointments are confirmed. The services of officers may be lent to Local or Municipal bodies, or to special institutions, which may be responsible for whole or part

Pay -The rates of pay are as follows: 3rd year Rs. 450 per month. 1st to 500 550 7th to 9th 10th to 12th 600 650 13th to 15th 700 16th to 18th 19th to 21st 750 . 22nd to 24th 800 850 24th and after

also an overseas allowance of Rs. 100 per expenses. There are also allowances to cover month to those below 12 years' service and the cost of journeys by rail and road. Bs. 150 per month to those of 12 years service and over. Every officer of the Service shall pass an examination in such vernacular as the Executive Committee shall appoint within the first three years of her service, and shall receive no increment after that period until such examination has been passed in addition furnished quarters are provided free of rent or a house rept allowance to be determined by the Provincial Committee may be granted in hen of it.

Officers of the Service are permitted to engage in private practice provided it does not interfere with their official duties, and the Provincial Committee has the power to deter-mine whether such duties are thus interfered with Except in very special cases retirement is compulsory at the age of fifty-five An officer recruited in England, whose appointment is not confirmed, or who is dismissed, is granted an allowance sufficient to pay her passage to

Leave Rules —(a) Casual Leave, which is occasional leave on full pay for a few days, and is not supposed to interrupt duty (b)
Leave on average pay is granted up to 2-11 of
an officer's period on duty, according to Fundamental Rules More than eight months' leave cn average pay is not granted at one time (c) Study leave may also be granted up to twelve months during the whole service. An allowance of 12 sh per day is granted in addition to \( \frac{1}{2} \) average pay during study leave (d) Extraordinary leave at any time at the discretion of the Executive Committee (c) Leave not due may be granted subject to the following conditions—(1) on medical certificate, without limit of amount, and (11) otherwise than on medical certificate, for not more than three months at any one time and six months in all, recknowld in terms of leave on average pay (f) on average pay is not granted at one time (c) reckoned in terms of leave on average pay The maximum period of continuous absence from duty on leave granted otherwise than on medical certificate is 18 months (g) When an officer returns from leave which was not due and which was debited against her leave account, no leave will become due to her until the expiration of a fresh period spent on duty, sufficient to earn a credit of leave equal to the period of leave which in the reserve shall be considered by the Execushe took before it was due allowances during extraordinary leave A made to the Women's Medical Service, but doctor appointed in England receives a sum of shall not of itself constitute a claim to appoint-£100 to cover her passage and incidental ment

There is also a Provident Fund, member contributing monthly thereto ten per cent of her salary, the Association contributing an equal amount, and each subscriber's account being granted interest on the amount standing to credit at the rate of 4 per cent per annum "or at such rate as the Council can invest without risk to the funds of the Association

An officer loses the contributions made to her account by the Association with the interest thereon if she resigns (except on account of illhealth) before completing five years' service or in the event of dismissal On retirement after approved service the sum which has accumulated to the credit of the subscriber is handed over to her

Free Passages -Officers of the Women's Medical Service are granted free return passages corresponding to those granted under the Lee Concessions to officers of all-India services The maximum number of return passages granted during an officer's entire term of service must not exceed four, the first falling due after 4 years

The Training Reserve of the Women's Medical Service -This Service has a sanctrioned cadre of eight, and is open to women graduates in medicine of the Indian Universities Salaries range from Rs 200 to Rs 300 per month, with furnished quarters or the equivalent in money, to those employed in India

- Two of the eight members of the reserve but not more at any one time, may be deputed to Europe by the Executive Committee for post-graduate training, and shall receive a supend at the rate of £ 200 a year each paid quarterly and return passage. Any member not so deputed shall be employed in India
- Ordinarily four years shall be spent in the reserve before a member is considered for appointment to the Women's Medical Service, but the Executive Committee shall have powe, to shorten this period in special cases Service There are no tive Committee when appointments are being

### VICTORIA MEMORIAL SCHOLARSHIPS.

secure a certain amount of improvement in the registration and supervision of indigenous dais mactising dais of India A sum of about 61 lakhs It has also done much propaganda work was obtained by public subscription, and centres were organised in each Province to early out the and Child Welfare Bureau of the Indian Red objects of the Fund Over 2,000 midwives have been trained in addition to large numbers who

The Victoria Memorial Scholarships Fund was have been partially trained. Of late years the organised by Lady Curzon in 1903, in order to Fund has done much to pave the way for the The fund is now administered by the Maternity

fully trained nurses, both to meet their own demands and those of outside institutions the work grew, it was decided and private agencies. In this way the supply of trained nurses, English, Anglo-Indian and Indian, is being steadily increased. In Bombay the organisation has gone a step farther, through the establishment of the Bombay Presidency Nursing Association, c/o St George's Hospital, Bombay This is composed of representatives of the various Nursing Associations in charge of individual hospitals, and works under the Government. The principle on which the Government The principle on which the Eccal Associations is governed is that there shall be central examination and control combined with the Indian Association might be fruction, however, was never.

State Registration of Nurses for all India is much required. A meeting was held in Bombay in 1923 when Nurses from the Presidency met to discuss the question. It is desired that India should have its own State Register as in the United Kingdom, South Africa, New Zealand, Australia, Canada and Burma, and that the curricula and examinations should be brought into line with these countries. Government has proposed to establish a Provincial Register preparatory to an All-India Register.

Nursing Bodies —The Secretary of the Calcutta Hospital Nurses' Institution is Mr A R Nicholson, Allahabad Bank Buildings, Calcutta. The names and addresses of the other Nursing bodies in Calcutta are Lady Minto's Indian Nursing Association (Bengal Branch), 4, Hungerford Street, Lady Rogers' Hostel for Indian Nurses, 144, Russa Road, South, Nurses' Academy, 6, Suburban Hospital Road; and Nurses' Bureau, 37, McLeod Street. In Madras there is the General Hospital, with a staff of 62 nurses, the Government Maternity Hospital, the Caste and Gosha Hospital at Kilpauk, the Royapatta Hospital and the Ophthalmic Hospital, also the Lady Ampthill Nurses' Institute and the South Indian Nursing Association (now amalgamated). President, Her Excellency Lady Goschen The Association has under its management—The Lady Ampthill Nurses' Institute, Western Castle, Mount Road, Madras, Fully trained and experienced nurses for all cases of illness both among Europeans and Indians, always available The Lady Willingdon Nursing Home, Western Castle, Mount Road, Madras, and Nigur Nursing and Convalescent Home, Ootacamund, for Medical, Surgical and Maternity cases The Nilgiri Nursing Home affords admirable facilities for convalescents.

Bombay Presidency.—The Bombay Presidency was amongst the first in India to realise the value of nursing in connection with hospital work. The first steps were taken on the initiative of Mr. L. R. W Forzest at St George's Hospital, Bombay, where a regular nursing cadre for the hospital was established together with a small staff of nurses for private cases. This was followed by a similar movement at the J J and Alhed Hospitals and afterwards spread to other hospitals in the Presidency Ultimately the Government laid down a definite principle with regard to the financial aid which they would give to such institutions, agreeing to contribute a sum equal to that

Afterwards, as the work grew, it was decided by Government that each nursing association attached to a hospital should have a definite constitution and consequently these bodies have all been registered as Associations under Act 21 of 1860 By degrees substantial endowments have been built up, although the Associations are still largely dependent upon annual subscriptions towards the maintenance of their works. This Association was incorporated under the Societies' Registration Act of 1860, in the year 1911, with the primary object of establishing a nursing service from which the Nursing staff at Government aided hospitals under management of Nursing Association might be recruited function, however, was never carried out by the Bombay Presidency Nursing Association, and under the present circumstances it appeared to the Committee improbable that it could be carried out, but up to now the auxiliary function of the examining and granting certificates to nurses and midwives, and maintaining a register of qualified nurses and midwives and also maintaining a Provident Fund for the employees of the affiliated associations have been successfully carried out from 1911 to 1988 Memorandum, Rules and By-laws of the Association however revised brought into line with the actual working of the Association Towards the end of 1927, the Committee decided that some steps must be taken to do so and accordingly appointed a sub-committee to consider the revision and amendment of the Memorandum, Rules and By-laws The Sub-Committee reported that it appeared to be impossible to amend and revise the present rules plecemeal and that the only way to put things in order would be to draft an entirely fresh constitution and rules

After fully considering the Sub-Committee's report the Committee agreed that the Association be incorporated by an Act on the line of the Registration Act in the United Kingdom Pending the passing of the Act the new Memorandum of Association having received the approval of Government was brought into operation from 1st April 1929

The following are affiliated Associations as well as Training Institutions —

- Address —The Registrar, Bombay Nursing Council, Old Custom House, Fort, Bombay
- Lady Minto's Indian Nursing Association—In 1906 this Association was manyurated replacing the Punjab and Up-country Nursing Association for Europeans in India, which society, established in 1892, had accomplished much useful work in this country. Owing however, to lack of funds it was found impossible to continue its administration and to carry out

the expansion of the work so urgently called tendents of India are not Associations to for. The name of the helpers identified with employ or to supply nurses, but are organithe premier Association to whom the public must ever be indebted are the Hon. Lady Lyttleton, Lady Helen Munro Ferguson and Mrs Cottrell, while Mrs. Shepherd, by her indefatigable efforts, is truly entitled to be regarded as the pioneer of a trained nursing system throughout the greater part of India The late Lady Curzon worked energeti cally to provide an enlarged Nursing organisation, but mainly owing to financial reasons, she was unable before she left India to bring the scheme to fruition The Home Committee of the existing Association, recognising the need for expansion, consented to take over the present Association and approached Lady Minto before she left England in 1905 for co operation towards this project, and after much consideration and discussion with the Government of India, Lieut Governors and Commissioners of Provinces, the present Association was established An appeal by Lady Minto addressed to the public both in England and India, was responded to most generously, and sufficient funds were collected to form an endowment fund, which has in spite of fluctua-tions increased a little with time. The assistance of a Government grant is much valued, as it enables Homes for the Sisters to be kept up in six Provinces in India and in Burma At the request of the Home Committee the enlarged Association was renamed the "Lady Minto's Indian Nursing Association "

The duties of the Home Committee are, as before, largely concerned in dispatching-as required—suitably trained and carefully selected Nurses for service on the staff of the Association in India. Thus, Europeans who are members of this Association are enabled to obtain skilled nursing at moderate charges on a sliding scale of fees determined by the income of each patient. The boon of obtaining good nursing at moderate terms is much appreciated, the rates of subscriptions being really an insurance against illness.

Her Majesty the Queen is a Patron of the Association. Her Excellency The Countess of Willingdon is President of the Central Committee | 304 student nurses ın India

Hon Secretary Malox F. Collins, RAMO Chief Lady Superintendent. Miss G-Beckett Address—Central Committee, LMI NA, Viceregal Lodge, Simia, and Red Cross Building, New Delhi

Secretary, Home Committee Miss M E Ray, B. B. C., 10, Witherly Mansions, Earls Court Sq.

Nurses' Organizations—The Association of Nursing Superintendents of India is now amalgamated with the Trained Nurses' Association of India, and has the one set of officers The Trained Nurses' Association of India and the Association of Nursing Superin- 1, Madavakkam Tank Road, Kilpauk, Madras

tendents of India are not associations to employ or to supply nurses, but are organizations with a membership wholly of nurses with the avowed objects of improving and unifying nursing education, promoting esprit de corps among nurses, and upholding the dignity and honour of the nursing profession. The Associations have a membership of 472, including nurses trained in ten or more different countries, Europeans, Americans, New Zeal anders, Australians and Indians The Association of Superintendents was started in 1905 as the Association of Nursing Superintendents of the United Provinces and the Punjab, but by the next year its membership had spread over the country to such an extent that the over the country to such an extent that the name was changed to include the whole of India. The Trained Nurses' Association was started in 1908, and a monthly Journal of Nursing began to be published by the two Associations in February, 1910 The Associa-tions are affiliated with the International Council of Nurses

The Trained Nurses' Association of India — Was founded and incorporated with the Association of Nursing Superintendents in 1908. Its objects are (a) to uphold in every way the dignity and honour of the Nursing profession, (b) to promote a sense of esprit de corps among all nurses, (c) to enable members to take counsel together on matters affecting their profession, (d) to elevate nursing education by obtaining a better class of candidates, (e) to raise the standard of training, (f) to strive to bring about a more uniform system of education, evamination and certification for trained nurses, both Indian and European, and (g) to arrange reciprocity between different provinces, States and other countries Nurses eligible for membership are those holding a certificate of not less than three years' general training in a recognised training school The Trained Nurses' Association of India is affiliated with the International Council of Nurses and its affiliated Associations are the Health Visitors' League and the Midwives' Union The official organ of the Association is called "The Nursing Journal of India" The Association has 800 members and

#### THE WOMAN SUFFRAGE MOVEMENT.

Hon Secretary and Treasurer Miss Gadsden, General Hospital, Madras.

Within the abnormally short period of eleven years the Woman Suffrage movement has risen in India, awept through the country sympathetically and achieved the political enfranchisement of women in all the nine British Provinces and in four Indian States.

Three fundamental causes have led to this remarkable success. first, the deep veneration that is given by the Hindu and Muhammadan religions to the feminine aspect of life equally with the mascanne as shown by the importance of goddesses, by the necessity for the presence of the wife at all ceremonies performed by a Brahman, by the idea of the sacred mystery of womanhood implied by the purdah, and by the general veneration of motherhood. Secondly, the time was psychological, for a new era was beginning for the Indian people by the introduction of a Scheme of Reforms in Indian government which was planned to give a basis of representative government on a much extended scale. The door was being opened to complete Self-government but only men were being invited to enter through it, although women compose half the people of the country and it had been by the joint efforts of men and women that the agitation for reform in the government had been made. The men and women of India were too awakened and too just to allow this injustice to remain unredress-

Thirdly, the long and strenuous agion for the vote by women in Britain and nerica and their recent victories had brought ividiy to the consciousness of all educated Indian men and women the whole question of the inclusion of women in public life, and it was also a national and international necessity that Indian women should be given as high a status as women in other parts of the Empire.

Though the Municipal franchise had heen granted to the women of the Bombay and Madras Presidencies over fifteen years ago it was so limited in numbers that it did not make a large impact on women's consciousness and indeed no protest was made when it was suddenly withdrawn from Madras women some years later. Over 1,700 women are qualified to vote for the Bombay Corporation and a fair percentage of these have polled at each election, and similarly in other Municipalities in that Presidency women have exercised their vote responsibly and intelligently. Since 1922 over 100 women have become Municipal Councillors and members of Local Government Boards. Their appointment has chiefly been by nomination but there have been notable seats won by election in open contest with men, such as the election of all the four women who first entered the contest for seat in Bombay Corporation, also the instance in which the single woman contestant in the Municipal elections in Lucknow secured the largest poll of any of the candidates. Many important local reforms have been secured by this large band of women Councillors, and every year sees a greater number of women serving on these local Councils and Boards.

It was owing to the rise of the political agitation for Home Rule between 1914 and 1917 that women began to wake up to their position of exclusion by British law from any share in representative government. The internment of one of their own sex, Dr. Besant, stimulated political activity and political self-consciousness amongst women to a very great extent. The moment for the ripe public expression of their feelings came when the Secretary of State for India came to India to investigate and study Indian affairs at first hand in 1917.

During the Hon E S. Montagu's visit only one Women's Deputation waited on him but it was representative of womanhood in all parts of India, and it brought to his notice the various reforms which women were specially desirous of recommending the Government to carry out.

The first claim for women suffrage for Indian women was made in the address presented to Mr. Montagu at this historic All-India Women's Deputation which waited upon him in Madras on the 18th December 1917 The section referring to enfranchisement merits full quotation.

"Our interests, as one half of the people, are directly affected by the demand in the united (Hindu-Muslim Reform) scheme (I. 3) that I the Members of the Councilshould be elected directly by the people on as broad a franchise as possible," and in the Memorandum (3) that "the tranchise should be broadened and extended directly to the people." We pray that, when such a franchise is being drawn up, women may be recognized as "people," and that it may be worded in such terms as will not disqualify our sex, but allow our women the same opportunities of representation as our men. In agreeing with the demand of the abovementioned Memorandum that "a full measure of Local Self-Government should be immediately granted, we request that it shall include the representation of our women, a policy that has been admittedly successful for the past twenty years in Local Self-Government elsewhere in the British Empire. The precedent for including women in modern Indian political life has been a marked feature of the Indian National Congress, in which since its inception women have voted and been delegates and speakers, and which this year finds its climax in the election of a woman as its President. Thus the voice of India approves of its women being considered responsible and acknowledged citizens, and we urgently claim that, in the drawing up of all provisions regarding representation, our sex shall not be made a disqualification for the exercise of the franchise or for service in public life."

The year 1918 was devoted to converting the Government forces to the justice and expediency of Indian Woman Suffrage, but this proved a more difficult matter. It was a disappointment first that though the Secretary of State had given a sympathetic reply to the All-India Women's Deputation, yet when the Scheme of Reforms, drawn up by him and Lord Chelmsford as the outcome of his visit to India was published no mention of women was made

though the widening of the electorate was one of the reforms suggested. When the South-borough Franchise Committee was formed to investigate the suggestions regarding the franchise in this Schene, the women suffragists took every means to bring to the notice of the Committee all the evidence which showed the need for, and the country's support of the lifelusion of women in the new franchise.

After the introduction of the Government of India Bill into Parliament in July 1919, a number of Indian deputations proceeded to London to give evidence before the Joint Select Committee of Members of both Houses of Parliament which had been appointed to place the Reforms on a workable basis Mrs Annie Besant, Mrs Sarojini Naidu and Mrs. and Miss Herabai Tata were the Women who were heard by the Committee in support of the extension of the franchise to women in India

The House of Commons decided that the question was one for Indians to answer for themselves and while retaining the sex disqualification in the Reform Bill they framed the Electoral Rules in such terms that if any Provincial Legislative Council should approve by a resolution in favour of women's franchise, women should be put on the electoral register of that 'Province This was the only provision regarding franchise matters which might be changed before a 10 years' time limit Until after that period women uere ineligible for election as Legislative Councillors.

Travancore, a very progressive Indian State, was the first to grant the Legislative vote to women at the close of 1920, and it was promptly followed by the Indian State of Jhalawar. In the first session of the Legislative Councils in 1921 it is gratifying to record that a motion was tabled by Dewan Bahadur Krishnan Nair of Majabar that he would bring forward a Resolution in the Madras Legislative Council to remove the disqualification of sex existing in regard to the Legislative Council franchise During the month that must legally intervene between the tabling of a Woman Suffrage motion and its introduction for Debate the Madras women under the leadership of the Women's Indian Association carried on all forms of public propaganda and canvassed the important members of the Council. The Debate took place on April lst and after a short discussion, in which it was ovident that opposition came only from the Muhammadan members, the debate itself be-came only an accumulation of appreciation of womanhood and an expression of faith in its future When the division was taken, it resulted in the resolution being carried by a majority Madras has thus the honour of being the first Province in British India to enfranchise its women, and it has done this ungrudgingly and unhesitatingly in the broad spirit of the equality of the sexes, as it grants the vote to women on the same terms as it has been granted to men. Dr (Mrs) Muthulakshmi Reddi, the first woman member of the British Indian Legislature, has been able to introduce legislation to do away with the Devadus service in the Hindu temples and the immoral traffic in women and children She has also devoted her attention to the development of the education of girls and to the promotion of the health of mothers and children.

Mr Trivedi brought forward a Woman Suffrage Resolution in the Bombay Legislative Council during the same session, but some irregularity in its wording caused it to be pronounced out of order. In June that subject was tabled again and championed by Rao Sahel, Harilel Desaibhai Desai of Ahmedabad, Deputy President of the Council As in Madras, the intervening month was filled with suffrage activity by the women of the Presidency and was remarkable for a large joint meeting of Bombay city women at which 19 Women's Societies took part, and for a suffrage meeting of Marathi and Gujerati women in Poona when over 800 women showed the greatest enthusiasm for the movement

The Bombay Council Debate on Woman Suffrage took three days and the subject was very fully discussed by over 40 members. The result was ratisfactory to the suffragists, the voting being 52 in favour, 25 against and 12 neutral. Thus Madras and Bombay Presidencies gave the lead to the other Provinces. In September, 1922, Mr S. M. Boye, in the Bengal Council, moved a Woman Suffrage Resolution, which was debated for three days but finally defeated by 56 to 37 votes, a bloc of 40 Muhammadan members voting solidiv against it. In September 1925 the Bengal Council passed the Suffrage Resolution by a vote of 54 to 38

Mr Devaki Prasad Sinha's similar Revolution in the Behar and Orissa Legislative Council was defeated by only a 10 votes' majority.

These Debates proved so educational to their respective Provinces that the Bengal and Behar Provinces have since granted qualified women the Municipal Vote

In February, 1928, a world suffrage record was made by the unanimous vote of the United Provinces Legislative Council in favour of Woman Suffrage

In 1926 the Punjab granted woman suffrage without a division, and in 1926 the Central Provinces

The new Reform Bill for Burma has included the grant of woman suffrage to the qualified Burmese women, and further made provision for their election as Councillors if the Council passes a Resolution desiring their admission and if that Resolution is approved of by the Governor.

In April, 1922, the Mysore Legislative Council unanimously passed the Woman Suffrage Resolution The vote for the Representative Assembly of Mysore was granted to women in October, 1922 The vote for Mysore Legislative Franchise was granted to the Mysore women by H H The Maharaja and His Privy Council in June 1923 In October, 1924, Assam Provincial Council granted Woman Suffrage for its Province by 26 to 8 It also has been the first Province to pass a Resolution in favour of allowing women to enter the Council as members

In 1929 soon after the All-India Women's Educational Beform was held in Patna, the Legislative Council of Behar and Orissa gave women the right of voting, election and nomination to the Council on the same terms as men Thus the whole of British India has now

given to nomen equal political rights with men. The result has already demonstrated itself in the remarkable advancement of all the interests of nomen along the lines of education, health, housing, morality and social customs.

The Indian Native States of Travancore, Co-chin and Rajkot are the only places in India where the ser disqualification has been com-pletely removed from the statute book. These have allowed women the right to stand for election for the Legislative Council as well as the right to vote for it, and two women have been elected to the newly formed Representative Council of Rajkot. The year 1925 has been noteworthy for the appointment of the first woman Minister to Government. Mrs. Poonem Taylong because a manhag of the Propogenera Lukhose became a member of the Travancore Legislative Council on taking the position of State Darbar Physician. She acted as Minister for Health to the State for three years Cochin State nominated Mrs. Madhavi Amma as a member of its first Legislative Council.

In British India by the terms of the Reform Bull the Councils had no power to alter the disqualification of eex which remains against the right to stand as candidates for election to the Councils This could only be changed by the note of the British Parliament, and the gaining of this right remained as a further objective of the namen suffragests Many large, influential meetings were held claiming the right of nomen to entry of the Logislatures A deputation of women about this subject waited on the Madras Governor and their claims were supported by him and by his Government. The Imperial Legislative Assembly and the Council of State had here recorded to prove Council of State had been accorded the power to grant women the franchise for their assemblies also by resolution, but only for those provinces which had already granted nomen the Legislature franchise. The Legislathe Assembly has passed by a large majority a iterolution granting the Assembly franchise to the women of such Provinces Accordingly in November 1923, women in India voted for the first time for the elections of both Provincial Legislative Councillors and members of the Legislative Assembly. The number of women who voted in the large cities was surprisingly large in Bombay and Madras Presidencies and convenient rooms of all castes and comromprised women of all castes and communities.

In April, 1926, as a result of a favourable recommendation of the Muddiman Committee on Frachise Reforms, the Rule was changed in the Reform Bill which disqualified women from entering the Legislatures. Power was granted to the Councils and the Assembly to pass Resolutions allowing qualified women to be elected.

came too late for women to stand for election with any great chance of success, so the Women's Indian Association asked that women be nominated by Government for the new Councils in those Provinces which had voted to admit them, and that women also be nominated to the Assembly and the Council of State. Thus the year 1926 marked another milestone, passed on the road to the complete political emandipation of Indian womanhood.

In 1926 the Central Provinces, the Punjab and Bengal, all granted the Franchise to women. The year 1927 was notable for the nomination of the first woman member to a Legislative Council the first woman member to a Legislative Council in British India, the recipient of the honour being Dr. Muthulakshii Arnal, and she was further honoured by being elected unanimously by her colleagues in the Madras Legislative Council, to the Office of Deputy President of the Council, to the Office of Deputy President of the Council Since then Mrs. Kale has been nominated to the Legislative Council of the Central Provinces, and Mrs. Ahmed Shaw to that of the United Provinces. A Deputation from the All-India Woman's Conference in Dalbi from the All-India Women's Conference in Delhi in 1928 waited on the Viceroy requesting him to nominate two women to the Legislative Assembly. That has still remained ungranted.

The number of women entranchised by the grant of the vote throughout India will not be more than a million under the present qualifications Property and not literacy is the basis of the franchise, though the grant of the vote to every graduate of seven years' standing ensures that the best educated women of the country as well as those who have to shoulder the largest property responsibility. shoulder the largest property responsibili-ties will be those who rightly will be the legislating influence on behalf of womanhood. As regards the custom of purdah prevailing in parts of India special provisions have been made in Municipal voting for purdan recording stations for purdan women in which a woman is returning officer and this has been found quite satisfactory and has been adopted also where desired in connection with Legislative Connori electrons

Though the Women's Indian Association was the only Indian women's society which had woman suffrage as one of its specific objects, almost all other women's organisations have combined in special efforts for the gaining of municipal and legislative rights and the following ladles have identified themselves specially with the movement: Lady D. Tata, Lady A. Bose, Lady T. Sadasivaier, the recommendation of the Muddiman Committee on Frunchise Reforms, the Rule was changed in the Reform Bill which disqualified women from the Reform Bill which disqualified women from the Regislatures. Power was gravited to the Councils and the Assembly to pass Resolutions allowing qualified women to be elected or nominated as members of these bodies. Arain Mairs Council, on the 17th July, was the first to pass a Resolution admitting women to be stated in August and October respectively. This enabled women to become members of the Councils which have been functioning tince then But the permission specially with the movement: Lady D. Tats, Lady A Bose, Lady T. Sadssivaier, the Begum of Cambay, Mrs. Ramplai Ranade, Mrs. Sarojnii Naidu, Mrs. Vanidia, Mrs. Jahi Jebangir Pelit, Mrs. Tata, Mrs. Wadia, Mrs. Jinarajadasa, Dr. A Besant, Mrs. Mrs. Wadia, Mrs. Jinarajadasa, Dr. A Besant, Mrs. Mrs. Chaudrasekhara Lyer, Miss S Borabli, Mrs. Chaudrasekhara Lyer, Miss S Borabli, Mrs. Palmer, Mrs. Sarajadevi Choudits members of the Councils which have been functioning tince then But the permission Mrs. Raschid, Mrs. van Gildeineester, etc.

# The School of Oriental Studies.

This School was established by Royal Charter provides teaching in more than seventy subjects June 1916. The purposes of the School in a considerable proportion of the spoken in June 1916. The purposes of the School (as set out in the Charter) are to be a School of Oriental Studies in the University of London to give instruction in the Languages of Eastern and African peoples, Ancient and Modern, and in the Literature, History, Religion, Law, Customs and Art of those peoples, especially with a view to the needs of persons about to proceed to the Last or to Africa for the pursuit of study and research, commerce or a profession, and to do all or any of such other things as the Governing Body of the School consider conducive or incidental thereto, having regard to the provision for those purposes which already exists elsewhere and in particular to the coordination of the work of the School with that of similar institutions both in Great Britain and in its Eastern and African Dominions and with the work of the University of London and its other Schools

The School possesses noble and interesting buildings, in Finsbury Circus, provided by the British Government under the London Institution (Transfer) Act of 1912 The sum of £25.000 required for the alteration and extension of the buildings of the London Institution for the purposes of the School was voted by Parlia-ment. The School buildings are quiet, although they are in the heart of the City. The School

languages instruction is given by teachers belonging to the countries where the languages are spoken, as it is the aim of the School to provide as far as possible both European and Oriental Lecturers in the principal languages included in the curriculum.

Courses on the History, Religions, and Customs of Oriental and African countries form a special feature in the teaching of the School There is a whole time Professor in Phonetics, the classes for which are numerically larger than in any other subject. It is intended to record fully in phonetic symbols all the languages taught at the School

Owing to the generosity of the Rockefeller Foundation a new sub-department under Pro-fessor Lloyd James has been opened for the teaching of and research into African Linguistics

Courses are also provided in Indian Law and the History of India, and arrangements are made from time to time for special courses of lectures to be given by distinguished orientalists not on the staff.

### PROVING OF WILLS.

In British India if a person has been appointed executor of the will of a deceased person, it is always advisable to prove the will as early as possible. If the will is in a vernacular it has to be officially translated into English. A petition is then prepared praying for the grant of probate of the will. All the property left by the deceased has to be disclosed in a schedule to be annexed to the petition. The values of immovable properties are usually assessed at 161 years purchase on the nett Municipal assessment. For estate under Rs 1,000 no probate duty is payable; up to Rs 9,000 in excess of first Rs, 1,000 the duty is at 2%, between Rs, 10,000 and Bs, 50,000 the duty payable is at 3% and between Bs, 50,000 and 1,00,000 the duty payable is at 4% and over Rs 1,00,000 the duty payable is at 4% and over Rs 1,00,000 the duty payable is at 5%. In determining the amount of the value of the estate for the purposes of probate duty the following items are allowed to be deducted.

 Debts left by the deceased including mortgage encumbrances.

- The amount of funeral expenses
- Property held by the deceased in trust and not benedicially or with general power to confer a beneficial interest.

The particulars of all these items have to be stated in a separate schedule. It is the practice of the High Court to send a copy of these schedules to the Revenue authorities and if the properties particularly immovable properties have not been properly valued, the Revenue department require the petition to be amended accordingly. In certain cases the Court then requires citations to be published and served on such persons as the Court thinks are interested in the question of the grant of probate. If no objection is lodged by any person so interested within 14 days after the publication or service of citation and if the will is shown to have been properly executed and the petitioner entitled to probate, probate is ordered to be granted.

## The Fisheries of India.

The fisheries of India, potentially rich, as yet yield a mere fraction of what they could were they exploited in a fashion comparable with those of Europe, North America or Japan The fishing industry, particularly the marine section, has certainly expanded considerably within the last 50 years concurrently with improvement in the methods of transport and increase in demand for fish, cured as well as fresh, from the growing population of the great cities within reach of the seaboard. The caste system, however, exerts a blighting influence on progress Fishing and fish trade are universally relegated to low caste men who alike from their want of education, the isolation caused by their work and caste and their extreme conservatism, are among the most ignorant, suspicious and prejudiced of the population, extremely averse to amending the methods, of their forefathers and almost universally without the financial resources requisite to the adoption of new methods, even when con-vinced of their value Higher caste capitalists have hitherto fought shy of associating with the low caste fishermen, and except in large operations on new lines, these capitalists cannot be counted upon to assist in the development of Indian fisheries As in Japan, it

appears that the general conditions of the industry are such that the initiative must necessarily be taken by Government in the uplift and education of the fishing community and in the introduction and testing of new and improved apparatus and methods

The first local Government to lead the way was that of Madras, which in 1905 initiated an investigation of the industry, both marine and fresh-water, appointing Sir F. A. Nicholson to supervise operations. Bengal followed Built in 1906, and from these beginnings have spring the local Fisheries Departments of Madras, Bengal, and Bihar and Orissa Bombay, the remaining seaboard province, has comparatively small fresh-water interests compared with Madras and Bengal and as it happens that her marine fisheries are favoured with good harbours and the most enterprising race of fishermen in India, there was less urgent need for State help in the industry Fisheries there were a subject of Government solicitude for five years after the war but they finally ceased to receive any attention after the abolition in 1924 of the short lived Department of Industries to which this subject was allotted.

### Madras.

margined by a shallow-water area within the 100 fathom line of 40,000 square miles outside of the mere fringe inshore, this vast expanse of fishable water lies idle and unproductive The surf-swept East coast is singularly deficient in harbours whereon fishing fleets can be based, and so from Ganjam to Negapatam, the unsurkable catamaran, composed of logs tied side by side is the only possible easy-going craft Its limitations circumscribe the fishing power of its owners and consequently these men are poor and the produce of their best efforts meagre compared with what it would be if better and larger boats were available and possible. The West coast is more favoured From September till April weather conditions are good enough to permit even dugout cances No difficulty is found in beaching boats throughout this season to fish daily canoes and The fishing population is a large one In the census taken by the Department of Fisheries in 1927-28, the fisher-population on the West coast totalled 114,502 The esteemed table fish of the coast consist of the Seer (Cybium or Scomberomorous), Pomfret (Apolectus and Stromateus) several large species of Horse Mackerel (Caranz) Jew fish (Sciaenidae), Whiting (Sillago) Thread-fins (Polynemus), Sardines (Clupen) and Mackerel (Scomber) In economic (Chippen) and Mackerel (Scomber) (Chippen) and the still greater promise of the future, is and the still greater promise of the future, is and the still greater promise of the future, is and the still greater promise of the future, is and the still greater promise of the future, is and the still greater promise of the future, is and the still greater promise of the future, is and the still greater promise of the future, is and the still greater promise of the wise and cautious (Scillago) (Sci importance, however, shouling fish and fish of to investigate existing conditions and future inferior quality such as Sardine (Clupea) potentialities, in 1907, a permanent status Mackerel (Scomber), Cat fish (Arius), Ribbon was given by the creation of a fisheries bureau

The Madras coast line of 1,750 miles is fish (Trichturus), Goggles (Caranz crumenargined by a shallow-water area within the opthalmus) and Silver bellies (Equila and Cazza) take precedence of the former Sardine and Mackerel over-shadow all others So greatly in excess of rood requirements are the catches of sardines, that every year large quantities are turned into oll and manure Fishing outside the 5 fathom line is little in evidence save by Bombay boats (Ratnaguri) which are engaged in drift netting for bonito, seer and other medium-sized fishes These strangers are enterprising fishers and bring large catches into Malpe and Mangalore and other convenient centres the material is largely oured for export

> The Madras Department of Fisheries.-As Government attention has been given in Madras over a longer period to the improve-ment of fisheries, and a larger staff concentrated upon the problems involved than elsewhere this Presidency has now the proud position of knowing that her fisheries and collateral industries are better organised and more progressive than those in other provinces. The credit for the wonderful success which has been achieved and the still greater promise of the future, is due in large measure to the wise and cautious

and this in turn has developed into a separate Department of Government which till August 1923 was being administered by Mr James Hornell, F L S, as Director and, is now controlled by his successor Dr B Sundara Raj, M.A., Ph.D The activities of the Department have greatly expanded since its inception A Committee constituted by Government to enquire into the working of the Department and make recommendations for its future development have just published their report in two volumes. The Evidence collected by the Committee is an octavo volume of 431 pages and the Report of the Committee is another similar volume of 264 pages The Report is a remarkable production which summarises the sims and achievements of the Department during the last quarter of a century and contains detailed proposals for the expansion of the Department activities in different directions The whole work of the Department has received a great impetus as a result of the report of this Committee. The Committee have empliasised the true purpose and aim of a technical Repartment of Eighterles to be essentially the material amelioration of the lot of the sea-going fishermen. The activities of the the The activities of the past 25 years were largely concerned with caring and canning, manufacture of oil and grano and erfe-guarding of Government revenue Remarkably successful as they were under the the guidance of Sir Frederick Nicholson, they comed somewhat to obscure what should be the primary object and policy of the Department Technological improvements in curing and coming and allied industries should follow with their in the wake of improved catches occo-conomic and humanitarian endeavours henceer necessary and important, in view of the caste system of India, could not directly add one fish to the actual catch of the fisherman The Committee has e therefore urged that efforts to improve the professional knowledge of the sea roing fishermen and the catching powers of his craft and tackle which were inaugurated with the inquisition of the trawler in 1926 must next rily occupy the first place of the departmental programme. The higher staff now consists of five Assistant Directors and an As 1st int Blologist These are respectively A feliant Hologist These are respectively in charge of (1) the chank and becked-de-mer i heries; (b) the co operative and educational work and the West coast fish curing yards, (c) inland pisciculture; (d) deep sea fishing; (e) proprie nda for rural pisciculture, and (f) Liological investigations and fishery research to the other officers have charge respectively of sections dealing with technological research, treat fisheries and the fisheries of the Northern Livi -- A special stati of officers trained in co-cremits a have been appointed for intensive very more fisherm n. The miccellaneous Department complet of a small demonstration are are station for caring, canning and allied in there a I. heres Training Institute at the last for important special training to trainer recal to trail in schools for fisherit iren if which there were 43 with a total of yards which term in der the control of the Salt and Aban's Ber in der the control of the Salt and Aban's Ber in the Islands and the clark of the Islands Bepartment

It is now possible to introduce the better methods of cure and improved hygiene which the Department has been straining to popularise, in all the yards Due to the transfer of the yards, the Fisheries Department has a large ramified staff of yard officers (Salt Sub-Inspectors, Petty Yard Officers and Peons) in almost every large fishing village on the coast Besides the direct work of issuing salt for curing, the Department sets itself to train these officers into expert advisers in curing methods and marketing fish, social workers for the inculcation of thrift, co-operative and progressive ideas and new industries and lastly as trained observers for recording and reporting on various biological questions connected with fish and fisheries and collecting statistics regarding the value and quantity of sea fish caught and landed Statistics have been published since 1925-26 regularly every year in the bulletins.

The activities of the Department are so varied and far-reaching that it is difficult even to enumerate them in the space available, much less to give details. So far its most notable industrial successes have been the reform of manufacturing processes in the fish-oil trade, the creation of a fish guano industry and the opening of an oyster farm conducted under hygienic conditions. Twenty-four volumes have been issued to date and the twenty-fifth volume in Press. All this work has been carried on under serious handicap for want of adequate staff and equipment.

The educational work of the Department is becoming one of its most important branches whether it be specially training teachers for schools in fishing villages or training men in the technology of curing, canning and oil manufacture, in co-operative propaganda and in the supply of zoological specimens for the use of college classes and museums. The last named has filled a long-feit want and is contributing materially to the advancement of the study of Zoology throughout India. There is now no need to obtain specimens from Europe as they can be had from the Research Assistant, Fisheries Station, Ennur, Madras, at moderate prices.

Fish Curing.—Fish curing is practised extensively everywhere on the Madras coasts its present success is due primarily to Dr Irancis Day who after an investigation during 1869-71 of the fisheries of the whole of India, pressed for the grant to fishermen of duty-free salt for curing purposes within fenced enclosures. He advocated much else, but the time was not ripe and the salt concession was the sole tangible result of his long and honourable efforts. His salt suggestions were accepted by the Madras Government, and from 1882 a gradually increasing number of yards or bonded enclosures were opened at which salt is issued free of duty and often at rates below the local cost of the falt to Government. At present about 115 of such yards are scattered along the coast and over 55,000 tons of wet fish are annually cured therein. The total receipts on the administration of these yards for the year 1930-31 was Rs 1,97.777-0-4 and expenditure.

Pearl and Chank Fisheries—In the absence of the pearl fishery during the year, the chank fisheries prospered An unprecedented number of 467,628 chanks were fished yielding a gross revenue of Rs. 17,860-8-8

The Inland Fisheries.—The Inland Fishcries of Madras compare unfavourably with those of Bengal. Many of the rivers dry up in the hot season and few of the many thousands of irrigation tanks throughout the province hold water for more than 6 to 9 months. As a consequence, inland fisheries are badly organised and few men devote themselves to fishing as their sole or even main occupation The custom is to neglect or ignore the fishery value of these streams and tanks so long as they are full of water only when the streams shrink to pools and the tanks to puddles do the owners or lessees of the fishing rights turn out The result is a dearth of fish to catch fish throughout the greater part of the year, a glut for a few days, and often much waste in consequence The chief fresh water fishes of economic importance are the Murrel, notable for its virtue of living for a considerable period out of water, and various carps including Labeo, Catla and the well-known favourite of sportsman in India the "Mahseer." Cat-fishes and Hisa In the Nilgiris, the Rainbow Trout has been acclimatised and thrives well The Government working in conjunction with the Nilgiri Game Association maintain a hatchery at Avalanche, where quantities of fry are hatched and reared for the replemshment of the streams of the plateau Fishing rights in the large irrigation tanks were transferred from Government to local authorities many years ago, these tanks are now being reacquired by Government in order that they may be stocked periodiment in order that they may be stocked periodically by the Department, the results so far have shown a profit on the operations To breed the necessary fry, 7 fish farms are in operation In these the chief fish bred are the Gouram, obtained from Java, and Etroplu suratensus which has the excellent attribute of thriving and breeding as well in brackish as in fresh water, both protect their eggs while daredown a visited by the Alexander. developing, a useful habit Both the Gourami and Etrophus are largely vegetarian in diet A further activity is represented by the breeding of small fishes especially addicted to feed upon the aquatic larves of mosquitoes. These are supplied in thousands to municipalities and other local authorities at a nominal price, for introduction into mosquito-haunted sheets of water, these anti-malarial operations have proved successful in the places where the local authorities have given proper attention to the direction given,

Marine Aquarium—Perhaps a word is necessary about this institution at Madras The building was constructed under the auspices of the Superintendent, Government Museum, Madras, and was thrown open to the public on 21st October 1909 The Superintendent, Government Museum, had charge of the Aquarium for ten years till 1919 when it was transferred to the Department of Fisheries Ever since its opening, being the first institution of its kind in Asia, it has been immensely popular with the public

A turtle tank of rough semi-circular shape with 21 feet as diameter was added during the course of the year

Deep Sea Fishing and Research—The fisherman has a fairly exhaustive knowledge of the fisheries along the coast up to 7 fathoms If the catches of fish are to be improved it is necessary to ascertam—

- (1) what kinds and quantities of fish are available beyond 7 fathoms, and,
- (2) how to exploit these deep sea fisheries economically.

The department's trawler "Lady Gosohen" has been exploring the off shore belt of the sea up to 100 fathoms from Point Calimere to Madras on the East Coast and Calicut to Pigeon Islands on the West Coast, with a view to ascertain the kinds and quantities of fish available there. The Assistant Biologist and staff worked on board the trawler One remarkable discovery made by this systematic survey is that fish of better quality and in larger quantity are available in deeper waters on the East coast from Point Calimere to Madras than on the West coast from Calicut to Pigeon Islands, during the months of the survey. Whether it is the case throughout the year is yet to be ascertained However it has helped to revise the general belief that fish are much more abundant on the West coast than on the East coast, and opens up possibilities for large fishery developments on the East Coast which will ultimately increase the supply of fish food and fish manure

Rural Pisciculture—As a result of the recommendation of the Royal Commission on Agriculture that all practical measures should be adopted to add fish to the diet of the cultivator thereby improving his nutrition, a scheme of rural propaganda was inaugurated in 1930 An Assistant Director with necessary staff was appointed to advise ryots in the stocking of village ponds which number over 106,050 in the Presidency. The work though begun in July 1930, has already completed a survey of ponds in 98 villages, 2,172 wells and 264 ponds in these villages were examined and out of this number 175 wells and 85 ponds were selected as suitable for piscicultural operations and 45 wells and 1 pond were stocked

Welfare Work—A remarkable feature in the work of the Madras Fisheries Department is the energy which it devotes to the improvement of the condition of the fisherfolk. On Sir Frederick Nicholson's initiative, the Department has always recognised the duty of spreading among them education and the habits of thrift, temperance and co-operation. The work has been specially successful on the West Coast. The number of fishermen's co-operative societies in 1930-31 was 73.

The need for special efforts to promote co-operation among fisherfolk and to renew and stimulate co-operative societies to more efficient work has been recognised by Government for some years. The Committee on Fisheries recommended that all co-operative work among fishermen both on the West and East Coasts in the Presidency should be done by the lisheries Department and that, on the analogy of the system in vozue in the Labour Department, the staff of Inspectors of Co-operative Societies should work under the Lisheries Department, the Co-operative supplying trained Inspectors and auditment he books of the societies. The Government partially accepted the recommendations and sanctioned the deputation of 3 inspectors of Co-operative Societies for exclusive rock among fenerment under the department.

Two in lutrial societies were started one places the villager of Brangid and the other at Palapatty on the schools and then his Wist Court in 1927 with the object of wearing ments. In other partial from the influence of by the Department of Principles of Ref. 1,500 each to the two someties manager of schools

dency should be done by the l'isheries Depart- for purchasing boats, nets and other accessories ment and that, on the analogy of the system for fishing purposes. They are working since and that the Labour Department, the staff 1927 with varying degrees of success.

1927 with varying degrees of success.

To promote the education of fishermen a training institution was opened in the middle of 1918 at Calicut to train teachers to work in elementary schools for the fisherfolk. The pupil teachers under training are familiarised with the work carried on in the fishery stations at Tanur and Chaliyam. They are given practical instructions in fishing, a boat having been purchased for the purpose. In some places the villagers themselves started the schools and then handed over to the Departments. In other places schools were opened by the Department at the request of the fishermen Local men are appointed as honorary manager of schools.

### Bengal & Bihar & Orissa.

The fishing value of this extensive deltaic; region has primarily in the enormous area occuprid by inland waters—rivers, creeks, theels, rd surmp-,—to say nothing of paddy fields and The swarm with fish and, as the Hindu , apal tion are free to a large extent from the avers on to a fish-out which is widely prevad mand for fish is enormous Rice and f -h.rr indued the principal mainstays of the principal mainstays of the principal mainstays of the principal mainstays of the principal concome fish as a regular item of the lit is calculated that 1 6 per cent, of the principation is engaged in fishing and its connectid to dec, a percentage that rises to 2 6 in the i'r were, Rajshahi, and Dacea Divisions. the Collinson of the fact that fishing is not this in spice of the fact that fishing is not the fact that fishing is not the fact that fishing is not the fact that fishing is not the fact that fishing is not inmulting traps and other devices exceedingly " lain in strict from the sea in innumerable the sea in innumerable track, of the Ganges and the other man of the Ganges and the other great of the danger and the street great it is (Lairo rollia) and the Latia (Catla collis) who is (Carri van nelgeto), prawns and it is a collis everywhere. Crown being employed for the purpose. The results showed that there are extensive area suitable for trawling and capable of yielding large quantities of high class fish. Much attention was devoted during these trawl cruises to the acquisition of increased knowledge of the marine fauna, the results being published in the Records and Memoirs of the Indian Museum. For various reasons, the chief perhaps being the hostility of vested interests, the lack of cold storage facilities and the loss of time involved by the trawler having to bring her catches to Calcutta instead of sending them by a swift tender, the experiment was financially a failure and was dropped. With ever-increasing de-mand for fish in Calcutta and the concurrent rise in prices, the prospects of remunerative steam-trawling are now much more, steam-trawling companies being floated in the imme-diate future. The trade is a difficult one to organize and without a rare combination of technical fishery knowledge and far-sighted and comprehensive organization the danger run by the investing public will be considerable Originally one Fisheries Department served the needs of the two provinces of Bengal and Bihar and Orissa. Separation was effected in after which fisheries in Bengal were administered by the Director of Agriculture. The Bengal Fighery Department was abolished under retrenchment in 1923 There is no immediate prospect of reconstitution of the Department. In Elhar and Onssa, Fisheres form a section of the Department of Industries.

Bengal Pisheries Department has of necessity a more limited scope for its activities than in the care of Madras Practically no coastal minor industrics exist, neither do the natural conditions lead us to suppose that any can be created without extreme difficulty, and in the absence of a great trawl industry which alone might be able to call into existence factories devoted to the uplift of the general tilization of fish bye-products. Apart from this, much can be done by itsofilers for the uplift of the general fishing population with a view to free them from the tyranny of the mahajans (fish contractors and

## The Forests

en in the earliest days of the British occuclon the destruction of the forests in many arts of India indicated the necessity for a strong forest policy, but whether or not our earlier administrators realized the importance of the forests to the physical and economic welfare of the country, the fact remains that little or nothing was done. The year 1855 marked the commencement of a new era in the history of forestry in India, for it was then that Lord Dalhousie laid down a definite far-sighted forest Dolica Further progress was delayed for a time by the Mutiny, but from 1860 onwards forest organization was rapidly extended to the other pro-The earlier years of forest administration were beset with difficulties, which is not surprising considering that the Department was charged with the unpopular duty of protecting the heritage of Nature from the rapacity of mankind—a duty which naturally roused the antagonism of the agricultural population of India Exploration, demarcation and settle-ment, followed by efforts to introduce protection and some form of regular management, were the first duties of the Forest Department Work on these lines, which is not yet completed in the more backward parts of the country, has been pursued steadily from the commence ment, and in consequence large tracts of forest have been saved from ruin and are gradually being brought under efficient management Whatever may have been the opinions held in some quarters half a century ago as to the need for a policy such as that expressed in Lord Dalhousie's memorable enunciation of 1855, there is no longer any doubt that results have amply justified the steps taken, and that in her forests India now possesses a property of constantly increasing value, the future im-portance of which it is hardly possible to over-

Types of Forest—More than one-fifth of the total area of British India (including the Shan States) is under the control of the Forest Department These areas are classified as reserved, protected or unclassed State forests. In the reserved forests rights of user in favour of individuals and the public are carefully recorded and limited at settlement while the boundaries are defined and demarcated; in the protected forests the record of rights is not so complete, the accrual of rights after settlement not being prohibited, and the boundaries are not always demarcated; while in the unclassed forests no systematic management is attempted, and as a rule the control amounts to nothingmore than the collection of revenue until the areas are taken up for cultivation or are converted into reserved or protected, including the Shan States) on 31st March valuab 1930 was 249,710 square miles or 22 6 of the

total area This was classed as follows. Reserved 107,753, Protected 6,263, Unclassed State 135,694.

Throughout this vast forest area, scattered over the length and breadth of India from the Himalayan snows to Cape Comorin and from the arid jumper tracts of Baluchistan to the eastern limits of the Shan States, there is, as may be imagined, an infinite variety in the types of forest vegetation, depending on variations of climate and soil and on other local factors Broadly speaking, the following main types of forest may be distinguished;—

- (1) Arid-country forests, extending over Sind, a considerable portion of Rajputana, part of Baluchistan and the south of the Punjab, in dry tracts where the rainfall is less than 20 inches The number of species is few, the most important tree being the babul or kikar (Acacia arabica), which however in the driest regions exists only by the aid of river mundations.
- (2) Deciduous forests, in which most of the trees are leafless for a portion of the year. These forests, which extend over large areas in the sub-Himalayan tract, the Pennsula of India and Burma, are among the most important, comprising as they do the greater part of the teak and sal forests.
- (3) Evergreen forests—These occur in regions of very heavy rainfall, such as the west coast of the Pennsula, the eastern sub-Himalay an tract, and the moisture parts of Burma and are characterized by the great variety and luxuriance of their vegetation
- (4) Hill forests—In these the vegetation varies considerably according to elevation and rainfall In the Eastern Himalaya, Assam and Burma, the hill forests are characterized by various oaks, magnolias and laurels, while in Assam and Burma the Khasia pine (Pinus khasia) grows gregariously at elevations of 3,000 to 7,000 feet In the North-Western Himalaya the chief timber tree is the deodar (Cedrus deodara), which occurs most commonly at elevations of 6,000 to 8,000 feet, and in association with oaks or blue pine (Pinus excelsa), towards its upper limit the deodar merges into very large areas of spruce and silver fir, while below it are found extensive forests of the long-needled pine (Pinus longifolia) which is tapped for resin.
- (5) Littoral forests—These occur on the sea coast and along tidal creeks The most characteristic trees belong to the mangrove family (Rhizophoreae) Behind the mangrove belt is an important type of forest occasionally inundated by high tides, in which the most valuable species is the "sundri" (Henticra jomes)

Forest Policy.—The general policy of the? The Forest Service -1 Government of India in relation to forests was comprised three branches definitely laid down in 1894 by the classification of the areas under the control of the Department into four broad clesses, namely

are usually situated in hilly country where the As irlant Congressors Of these 201 have teleption of forest growth is of vital importance been recruited direct to the service. The officers on account of its influence on the storage of of this service are recruited as probationers the rainfall and on the presention of crosson the following methods prescribed in and sudden floods

(b) Lorests which afford a supply of valuable timbers for commercial purposes, such, for example, as the teak forests of Burms, the sulforests of Northern, Central, and North-Eastern India, and the deodar and pine forests of the North-Western Himalaya.

(c) Minor forests. containing somewhat inferior kinds of timber, and managed for the production of wood, fodder, grazing and other produce for local consumption, these foresta

Pasture lands —These are not "forests" in the generally understood sense of the term but grazing grounds managed by the Forest Department merely as a matter of convenience.

These four classes of forest are not always sharply divided from each other, and one and the same tract may to a certain extent be managed with more than one object

Administration —The forest butiness of the Government of India is carried out in the Department of Education Health and Lands. The Inspector-General of Forests is also President of the Forest Research Institute at Dehra Dun and 15 the tecnnical adviser to the Government of India in forest matters Under the Constisubject in Bombay and Burma, where they had long been administered by the Provincial Governments, and in 1924 the Beforms Inquiry Comments, mittee presided over by the late Sir Alexander Muddiman, Home Member of the Government of India, recommended that they be trans ferred in other provinces now unless any local Government on examination of the positione

Territorial charges.—The various provinces are divided into one or more Forest Circles; each in charge of a Conservator of Forests, provinces containing three or more circles also or have retired. The future strength is not have a Chief Conservator who is the head of expected to remain at more than three to the Department for his province. Circles are (one each in Bombay, Madras and Punjab) divided into a number of Forest Divisions, (d) The Provincial Service.—Formerly it is charge of members of the Imparial of Parts. in charge of members of the Imperial or Provincial Forest Service, these Divisions in most cases correspond to civil districts Each Division contains a number of Ranges in charge junior members of the Provincial Service 10 of Forest Rangers or Deputy Rangers; heavy Divisions are also sometimes divided into Subdivisions. The Ranges are further subdivided into a number of beats or protective charges held by Forest Guards or in some cases by Foresters.

### WIRELESS TELEGRAPHY AND TELEPHONY.

Beam Stations—The year 1927 saw the commencement of Beam wireless services on the Marconi system between India and the United Kingdom Powerful transmitting and receiving stations erected at Poona and Dhond respectively by the Indian Radio Telegraph Company are connected by land lines with the Central Telegraph Office in Bombay, whilst stations at Skegness and Grimsby are similarly connected with the General Post Office in London, and the circuits are so arranged that messages are exchanged between Bombay and London without intermediate handling at the Beam stations at either end The huge aerial systems at Poona and Dhond, each supported on five steel towers 287 feet in height, are landmarks over a distance of many miles The service was maugurated by His Excellency the Viceroy on 28rd July 1927 at the Central Telegraph Office, Bombay, when His Excellency transmitted a message to the King and His Majesty's reply was received a few minutes later

It is noteworthy that the opening of the Beam wireless service coincided with a reduction in rates by the cable companies. The Eastern Telegraph Co, which operates the cable from Europe to India, has become merged in the New Imperial and International Communications Ltd.

For reasons of economy, most of the inland wireless stations in India were practically closed down and placed in charge of "Care and Maintenance" parties which carry out tests twice a month, the exceptions being Peshawar Radio, which always maintained official communication with Kabul in Afghanistan and Kashgar in China, and Jotogh Radio, which receives British Official Wireless sent out from Oxford and Rugby and passes the messages to Reuter's Agency for distribution to subscribing newspapers. The stations at Delhi and Allahabad have now been equipped with apparatus to enable them to function as aeronautical wireless stations and they are used as such New wireless stations for aeronautical purposes have been erected at Jodhpur in Bikaner, and Gaya. The wireless installations at Karachi and Calcutta have been modified so as to meet all the Wireless requirements of aircraft passing over India. New stations equipped for aeronautical communication purposes are under construction at Chittagong, Akyab, Sandoway and Bassein

The coast stations, however, have been main tained in a state of high efficiency and many improvements effected. The application of the Baudot system to the high-speed contannous-wave wireless stations at Madras Fort and Mingaladon (Rangoon) has proved extremely satisfactory, and a large portion of the traffic between Southern India and Burma is regularly worked by this direct route instead of the circuitous route via Calcutta. The traffic is interrupted occasionally by atmospheric interference, particularly during the hot weather but the difficulties have been largely overcome by handspeed working during the worst periods.

For many years the Bombay stations known as Bombay Radio was located on Butcher Island in the Harbour, but during 1927 a fine

Beam Stations—The year 1927 saw the pew station equipped with modern apparatus immencement of Beam wireless services on was erected and taken into service at Santa Cruz, was executed and taken into service at Santa Cruz, was executed and taken into service at Santa Cruz, was executed and taken into service at Santa Cruz, was executed and taken into service at Santa Cruz, was executed and taken into service at Santa Cruz, was executed and taken into service at Santa Cruz, was executed and taken into service at Santa Cruz, which is the service of the service at Santa Cruz, which is the service of the service at Santa Cruz, which is the service of the service at Santa Cruz, which is the service of the service of the service at Santa Cruz, which is the service of the service at Santa Cruz, which is the service of the service at Santa Cruz, which is the service of the service of the service at Santa Cruz, which is the service of the service o

just outside the limits of Bombay Municipality
Radio telegrams exchanged with ships at sea
by coast stations in India and Burma continue
to increase in number, and now total about
30,000 per annum Official telegrams are
exchanged with the British Naval station at
Matara (Ceylon) via Bombay Radio Regular
services are also maintained between Burma and
the Malay Peninsula via Rangoon and Penang
and between Burma and Sumatra, whilst radio
traffic is passed between Madras and Colombo
when the normal route is interrupted.

Wireless telephonic communication between pilot vessels, lighthouses and shore stations are maintained by the Port Trusts at Bombay and Rangoon. In March 1931, telephonic communication between Bombay and London was established for the first time The conversations were initiated from the s. Belgenland a tourist ship lying in Bombay Harbour and were made possible through the courtesy of Standard Telephones and Cables Limited in conjunction with the International Marine Radio Company

Safety at Sea.—A noticeable feature of wireless development during the nast two years has been the provision of direction-finding apparatus at Bombay and Karachi and facilities at other coast stations whereby ships at sea equipped with direction-finding apparatus can obtain bearings on coast stations and thus determine their position with a remarkable degree of accuracy The latest style of Marcony beacon was erected on Kenhedy Island during 1931 to guide shipping approaching Bombay harbour All Ships equipped with wireless direction finders will now be able to obtain exact knowledge of their whereabouts at a distance of 150 miles from the coast. The beacon is an experiment and is likely to be the first of many others along the coast of India Improved arrangements for broadcasting time signals, weather reports and havigational warnings from coast stations have also proved of value to ships at sea.

Broadcasting —For several years, limited broadcasting services were maintained by Radio Clubs in Calcutta, Bombay, Madras, Karachi and Rangoon, and although the transmitting sets employed by them were of very low power, the broadcasts were tuned-in-over practically the whole of India The-clubs were assisted financially by a Government contribution based upon the revenue from license fees, but this did not nearly suffice to cover the cost of the transmissions, and the greatest credit is due to the members of those clubs for the sporting manner in which they provided additional funds and undertook the entire responsibility for the programmes Credit is also due to the Indian States and Eastern Agency for the loan of transmitting apparatus, without which the broadcasts would have been impossible.

After negotiations extending over several years, an Indian Broadcasting Company was granted a license to establish broadcasting services upon lines similar to those of the British Broadcasting Corporation, and transmitting stations were erected in Bombay and Calcutta,

the services at the former being maugurated by His Excellency the Viceroy in July 1927 and the latter by the Governor of Bengal a month These stations had each an aerial input of three kilowatts, the same as that of the 2LO stations in London, of which they are practically The programmes were so arranged that both Indian and European music are broadcast daily and the news bulletins and market and weather reports are read in two languages

Bombay broadcasts normally on a wavelength metres, and Calcutta on 370 4 and 49 10 metres Reception in either of these citics, and for a distance of twenty or thirty miles around, is possible on crystal sets, of which a very large number have been sold Valve sets are necessary for those living further afield, but although there has been a considerable demand for these, the sales have not reached expectation. One of the greatest difficulties in India is the maintenance of batteries, which is no inconsiderable item when sets containing five or six valves are employed

Broadcasting Company was Indian wound up in 1930 and its operations have since been conducted by the Government of India, in the Industries and Labour Department Government for this purpose formed an Indian State Broadcasting Service and instituted a Central Broadcasting Advisory Committee, representative of the non-official public in association with the Departmental officials, to keep them in touch with public opinion. The Committee has as its chairman the Member of the Viceroy's Executive Council in charge of the Subject (now the Hon Sir Joseph Bhore) and upon it sit at the present time Messrs N B Macbeth and N. M Dumasia, Bombay, H H Reylands and K C Neogy, M L A, Calcutta, M R Coburn, Financial Adviser to Government in the Posts and Telegraphs Department and B Rama Rao, Joint Secretary to Government in the Industries and Labour Dept It is now proposed to establish a series of additional broadcasting stations in different parts of India so as to spread broadcasting receivable on low-powered sets throughout the land Important proposals with this purpose in view were discussed by the Advisory Committee in Calcutta in December, 1930 An event of considerable importance was Bombay's broadcast to the world on December 18, 1938 This broadcast, played from the Empire Station, gave listeners in Europe their first opportunity of hearing a typical Indian programme

Licenses -Broadcast receiving licenses are issued at Head Post Offices at a fee of ten rupees per year, and cover the use of receiving throughout British India except Baluchistan and the North-West Frontier Frontier fixed stations for transmitting and experimental purposes are much sought after, careful scrutiny of the the North-West Frontier Province Licenses for applicants, more than 300 have been issued The number of traders in wireless apparatus who are required to take out special Import incenses has increased considerably during the past year. This improvement must be ascribed primarily to the commencement of broadcasting.

Prospects — The Government of India have always encouraged the development of wireless

in India by private enterprise and to this source that India may look in the future for considerably increased internal radio com-There are two most promising lines of development, viz-

(a) Erection of small sets either for speech or morse in districts where no land lines exist. and to link such districts with the existing landlines. In this connection it may be remarked that modern small radio sets are capable of using either morse or speech at will and if used for speech can be operated by the ordinary desk telephone instrument in daily use all over India.

(b) The use of radio as a substitute for landline to form the trunk telephone route between cities which already have telephone

These would, it is thought, open up a new industry which if properly forstered would very soon extend its sales outside the limits of India It is believed that the majority of parts for small radio sets could be more cheaply manufactured in this country than they can be imported and such an industry would find the right kind of skilled labour already in India

Radio Telephone Service.—An event of considerable importance was the inauguration of the radio telephone service between India and England on May 1, 1983, when His Excellency Sir Frederick Si kes, Governor of Bombay, and Sir Samuel Hoare, Secretary of State for India, exchanged messages as a preliminary to the

opening of the service to the public

The service is based upon the beam wireless system which has been operated successfully for the past six years by the Indian Radio and Cable Communications Company between India and the United Kingdom and, since the beginning of this year, between India and Japan Initially, the radio telephone service was limited to Bombay and Poons at the Indian end and to the United Kingdom at the other, but faculties for conversation with other places were speedily arranged, and within a month it was possible for people in Bombay to speak to the United States, Canada, Australia, South Africa and many other parts of the world Similarly, there is a gradual extension of the area covered in India, and when the improvement of the landlines has been completed, nearly every important city will be in direct telephonic communication with England and the rest of the world.

Many technical problems are involved in the perfection of the India-England wireless telephone, not the least of which is the ensuring of secrecy When the service was first opened, reports from ordinary broadcast listeners in all parts of the country and as far afield as Ceylon indicated that conversations could be "tapped" with the greatest case, but later

" secrecy gear " was installed

Any private telephone owner will be able to use the service for an overseas call. Before doing so, however, he will have to place a deposit of Rs 100 with the Divisonal Engineer, Telegraphs, Bombay.

The charge for a 3 minutes' conversation to (a) places in England, Scotland and Wales is Rs 80, (b) Northern Ireland (Dublin) and the Isle of Man, Rs 84 Lach additional minute's conversation to places under (a) will cost Rs. 26-11 and to (b) Rs 28.

the Mutiny its freedom had to be temporarily controlled by the Gagging Act which Canning passed in June 1857 on account of the license of a very few papers, and owing still more to the fears of its circulating intelligence which might be prejudicial to public interests. The Act was passed only for a year at the end of which the press was once more free

On India passing to the Crown in 1858, an era of prosperity and progress opened for the whole country in which the press participated There were 19 Anglo-Indian papers at the beginning of this period in 1858 and 25 Native and in 1876 the office of the number of the former did not show a great from Simis to Lahore, rise in the next generation, but the rise in to be published daily.

influence and also circulation was satisfactory. Famous journalists like Robert Knight, James Maclean and Hurrus Mookery flourished in this generation. The Oionl and Multary Gazette was originally published in Simia as a weelly paper, the first issue being dated June 22nd 1872. Prior to and in the days of the Mutiny the most famous paper in Northern India was the Mofussihite, originally published at Meerut, but afterwards at Agra and then at Ambala After a lively existence for a few years in Simia the Civil and Multary Gazette acquired and incorporated the Mofussihite, and in 1876 the office of the paper was transferred from Simia to Lahore, and the Gazette began to be published daily.

### -- INDIAN PRESS LAW.

Before 1835 all printing of books and paper was subject to heence by the Governor-General in Council, and the licences were issued or refused at the discretion of Government. Act XI of 1835 repealed the old Regulations and merely required registration of the printer and made a few minor requirements. That Act was replaced in 1867 by the present Press and Registration of Books Act, and, except for an Act which was in force for one year during the Mutiny, there was no further legislation directly affecting the Press until 1878 when the Vernacular Press Act was passed That Act was repealed during the Viceroyalty of Lord Ripon in 1882. From that date until 1907 Government made no attempt to interfere directly with the liberty of the Press, the growth of sedition being dealt with in other ways by the passing in 1898 of section 124A of the Penal Code in its present form, which had been originally enacted in 1870, and by the introduction into the Penal Code of section 153A and into the Criminal Procedure Code of section 108. There, were a certain number of prosecutions under those sections up to 1907, but the dissemination of sedition through the Press continued In 1908 the Newspaper (Incitement to Offences) Act was passed which dealt with papers inciting to murder or to acts of violence. This Act failed to have the desired effect.

The Indian Press Act, 1910, was a measure of wider scope, the main object of which was to ensure that the Indian press generally should be kept within the limits of legitimate discussion.

The Act deals, not only with incitements to murder and acts of violence, but also with other specified classes of published matter, including any words or signs tending to seduce soldiers or sailors from their allegiance or duty, to bring into hatred or contempt the British Government, any Native Prince, or any section of His Majesty's subjects in India, or to intimidate public servants or private individuals.

The different sections of the Act have in view (1) Control over presses and means of publication, (ii) control over publishers of newspapers. (iii) control over the importation into British India and the transmission by the post of objectionable matter; (1v) the suppression of seditions or objectionable newspapers, books, or other documents wherever found.

Repeal of Press Legislation—By the autumn of 1917 the Government of India had begun to consider the desirability of modifying at least one section of the Press Act to which great exception had been taken on account of the wide powers that it gave Finally, after more than once consulting Local Government, a Committee was appointed in February 1921 after a debate in the Legislative Assembly, to examine the Press and Registration of Books Act, 1867, and the Indian Press Act, 1910, and report what modifications were required in the existing law That Committee made an unanimous report in July 1921, recommending:—

- (1) The Press Act should be repealed
- (2) The Newspapers Incitements to Offences Act should be repealed.
- (8) The Press and Registration of Books Act and the Post Office Act should be amended where necessary to meet the conclusion noted below: (a) The name of the editor should below: (a) The name of the enformment be inscribed on every issue of a newspaper and the editor should be subject to the same liabilities as the printer and publisher, as regards criminal and civil responsibilities: (b) any person registering under the Press and Registration of Books Act should be a major as defined by the Indian Majority Act, (c) local Governments should retain the power of con-fiscating openly seditious leaflets, subject to the owner of the press or any other person aggrieved being able to protest before a court and challenge the seizure of such document, in which case the local Government ordering the confiscation should be called upon to prove the seditions character of the documents. The powers conferred by Sections 13 to 15 of the Press Act should be retained Customs and Postal officers being empowered to selze seditious literature within the meaning of Section 121A of the I. P. C subject to review on tue part of the local Government and challenge by any persons interested in the courts , (e) anv person challenging the orders of Government should do so in the local High Court . (1) the term of imprisonment prescribed in Sections 12, 13, 14 and 15 of the Press and Registration of Books Act should be reduced to six months, (9), the provisions of Section 16 of the Press Act should be reproduced in the Press and Registrition of Books Act

Effect was given to these recommendations

during the year 1922

Press Association of India.—At the end of 1915 this Association was formed in Bombay According to the articles of constitution "Its objects shall be to protect the press of the country by all lawful means from arbitrary laws and their administration, India,-At the from all attempts of the Legislature to encroach on its liberty or of the executive authorities | Council.

to interfere with the free exercise of their calling to interfere with the free exercise of their caning by journalists and press proprietors, and for all other purposes of mutual help and pro-tection which may be deemed advisable from time to time." Members pay a minimum subscription of Rs. 10 annually. The affairs of the Association are managed by a

An event of great importance in the history of Indian banking was the formation on the 27th January 1921 of the Imperial Bank of India by amalgamation of the three Presidency Banks of Bengal, Bombay and Madras.

The idea of a Central Banking establishment for British India was mooted as early as 1886, and was the subject of a minute by Mr. James Nilson, when Finance Member, in 1859 Again, Nilson, when Finance Member, in 1859 Again, in 1867 Mr. Dickson, the well-known Secretary in 1867 Mr. Dickson Mr. of the Bank of Bengal, submitted detailed proposals for an amalgamation of the three Presidency Banks On various later occasions the matter was brought forward without result and It was discussed by the Chamberlain Commission on Indian Finance and Currency in 1918
The present scheme which has come to fruition was however the result of a rapprochement on the part of the Banks themselves as a result of the experience gained during the war and the realisation of the desirability of strengthening and extending the Banking system in and extending the

The Presidency Banks -The history of India. the Presidency Banks in their relationship with Government falls into three well-defined stages. Prior to 1862 the Presidency Banks had the right of note issue, but were directly controlled b) Government and the scope of their business was restricted by their charters. The second period was from 1862 to 1876. In 1862, the Banks were deprived of the right of note issue, though by their agreements of that year they nere authorised to transact the paper currency business as agents of Government. As com-pensation for the loss of their right of issue, they were given the use of the Government balances and the management of the treasury work at the Presidency towns and at their branches. The old statutory limitations on their business. The old statutory limitations on their business. The old statutory limitations on their business. the Government's power of control remained In 1866 the agreements were revised and the paper currency business was renoved from their control and placed under the direct management of Government. The third period dates from the Presidency Banks Act of 1876 by which nearly all the most important limitations of the earlier period were proposed. But they beliefly the president reimposed. But, very briefly, the principal restrictions imposed by this Act prohibited the Banks from conducting foreign exchange business, from borrowing or receiving deposits irrable out of India, and from lending for a longer period than six months, or upon mortgage or on the security of immovable proretty or upon promissory notes bearing less than two independent names or upon goods, unle s the goods of the title to them were deposited with the Bank as security. At the same time Government abandoned direct interference in the management, ceasing to appoint official directors and disposing of their shares in the Bruis The Braks no longer enjoyed the full use of the Government balances Reserve Trassuries were constituted at the Presidency towns into which the surplus revenues were drawn and the balances left at the disposal of the Links were strictly limited.

This system continued with only minor modifications until 1920. During the war, however, the policy was deliberately adopted of reducing the amount of the balances held in the Reserve Treasuries and leaving much larger balances with the Headquarters of the Presidency Banks in order to assist the money market.

The Imperial Bank of India —Under the Imperial Bank of India Act of 1920 as amended by the Amendment Act of 1934 which comes into force at such date as the Governor-General in Council may by notification in the Gazette of India appoint, the control of the Bank is entrusted to a Cential Board of Directors with Local Boards at Calcutta, Bombay and Midras and such other places as, the Central Board may determine The Central Board of Directors shall consist of .-

- the presidents, vice-presidents and the secretaries of the Local Boards, (a)
- one person elected from amongst the members by each Local Board,
- Managing Director and a Deput Managing Director appointed by th Central Board , (c)
- (d) not more than two non-officials, nonnated by the Governor-General m

Representatives of any new Local Boards, which may be constituted, may be added at the

discretion of the Central Board
The Deputy Managing Director and the Secretaries of the Local Boards are entitled to attend the Meetings of the Central Board but not entitled to vote The Deputy Managing Director a sentitled to vote in the absence of the Director is entitled to vote in the absence of the

The Governor-General in Council shall nomi-Managing Director nate an officer of Government to attend the Meetings of the Central Board but he shall not be entitled to vote

Under the Imperial Bank of Indu Act of 1920 provision was made for the increase of the capital The capital of the three Presidency Banks consisted of 31 crores of rupees in shares of Rs 500 each, fully subscribed The additional of Rs 500 each, fully subscribed The Rs 500 each of Rs 500 each o up, making the present capital of the Bink Rs 112 crores, of which Rs 5,62,50,000 has been paid up. The Reserve Fund of the Bank Is Rs 5,85,00,000 and the Balance Shoot of 31st is Rs 5,35,00,000 and the Balance Sheet of 31st December 1934 showed the Government balance at Rs 6,72,19,792, other deposits at Rs 74,27,94 823 and Cash Rs 18, 97, 37, 908, with a percentage of cash to liabilities of 23 15

Agreement with Reserve Bank of India
The Bank shall enter into an agreement with the Reserve Bank of India which shall be subject to the approval of the Governor-General in Council and will remain in force for 16 years and there after until terminated after five years und mean elther side Provisions to be contained in the agreement between the Imperial Bank of India and the Reserve Bank of India are agent of the Reserve Bank of India at all places mined on the basis of the actual cost to the in British India where there is a branch of the Imperial Bank of India, as ascertained by expert Imperial Bank of India which was in existence accounting investigation at the commencement of the Reserve Bank of India Act 1934, and there is no branch of the Banking Department of the Reserve Bank of arbaf

In consideration of the preformance of the Agency duties, the Reserve Bank of India shall pay to the Imperial Bank of India as remuneration a sum which shall be for the first ten years during which this agreement is in force a commission calculated at 1/16 per cent on the first 250 crores and 1/32 per cent on the remainder of the total of the receipts and disbusements dealt with annually on account of Government As for the remaining five years the remuneration

The Imperial Bank of India shall be the sole to be paid to the Imperial Bank shall be deter

In consideration of the maintenance by the Imperial Bank of India of branches not less in number than those existing at the commencement of the Reserve Bank of India Act, the Reserve Bank of India shall, until the expression of 15 years, make to the Imperial Bank tho following payments

- (a) during the first five years of this agreement Rs 9 lacs per annum,
- (b) during the next five years of the agreement Rs 6 lacs per annum, and
- (c) during the next five years of the agreement Rs 4 lacs per annum

paper eligibls for purchase under the Act
The Bank will publish the accounts of both
the Issue and Banking Departments weekly in
the Gazzette of India

The Bank shall create an Agricultural Credit Department

The full text of the Reserve Bank Act is repo-

### THE EXCHANGE BANKS.

The Banks carrying on Exchange business in India are merely branch agencies of Banks having their head offices in London, on the continent, or in the Far East and the United States Originally their business was confined almost exclusively to the financing of the ex-ternal trade of India; but in recent years most of them, while continuing to finance this part of India's trade, have also taken an active part in the financing of the internal portion also at the places where their branches are situated.

At one time the Banks carried on their operations in India almost entirely with money borrowed elsewhere, principally in London— the home offices of the Banks attracting deposits for use in India by offering rates of interest much higher than the English Banks were able to quote. Within recent years how-ever it has been discovered that it is possible to attract deposits in India on quite as favourable terms as can be done in London and a very large proportion of the financing done by the Exchange Banks is now carried through by means of money actually borrowed in India No information is available as to how far each Bank has secured deposits in India, but the following statement published by the Director General of Statistics in India shows how rapidly such deposits have grown in the aggregate within recent years

TOTAL DEPOSITS OF ALL EXCHANGE BANKS SECURED IN INDIA.

Exchange Banks' Investments.

Turning now to the question of the investment of the Banks' resources, so far as it concerns India, this to a great extent consists of the purchase of bills drawn against imports and exports to and from India

The financing of the import trade originated and is carried through however for the most part by Branches outside India, the Indian Branches' share in the business consisting principally in collecting the amount of the bills at maturity and in furnishing their other branches with information as to the means and standing of the drawees of the bills, and it is as regards the export business that the Indian Branches are more immediately concerned The Exchange Banks bave practically a monopoly of the export finance in India and in view of the dimensions of the trade which has to be dealt with the Banks would under ordinary circumstances require to utilise a very large proportion of their resources in carrying through the business They are able however by a system of rediscount in London to limit the employment of their own resources to a com-paratively small figure in relation to the bus-ness they actually put through. No definite information can be secured as to the extent to which rediscounting in London is carried on but the following figures appearing in the balance sheets dated \$1st December 1983 of the undernoted Banks will give some idea of this

### LIABILITY ON BILLS OF EXCHANGE PF. DISCOUNTED AND STILL CURPENT

	£.
Chartered Bank of India, Austra- lia and China	3,477,000
Eastern Bank, Ltd .	183,000
Hongkong and Shanghai Banking Corporation . Mercantile Bank of India, Ltd National Bank of India, Ltd P & O Banking Corporation, Ltd	1,074,000 1,383,000 2,93<,000 1,350,000
	10,414,000

The above figures do not of course relate to re-discounts of Indian bills alone, as the Banks operate in other parts of the world also, but it may safely be interred that bills drawn in India form a very large proportion of the whole

The bills against exports in tirrely drawn at prefer to high the bills on tiefe own necoust three months' sight and may either the "chan" is an investment until fest sity. or be accompanied by the documents relating to the goods in respect of which they are drawn home or nealist credits uponed to Parks of the purpose of pure astery expect tills to a satisfy of may of their following are fluored to bound to Parks of may of their following are they do an Ixcharge limit endopement they are recally taken uponed to the discount tills are the principal as a satisfy of may of their following are they do an Ixcharge limit endopement they are readily taken up by the discount house and Rinks in London. Any bills purchased in India are sent house by the first possible. Mail so that presuming they are rediscounted as soon as they reach London the Exchange Binks are able to recure the return of their money in about 16 or 17 day instead of having to wait for three months which would be the over if they were unable to relicount. It must not be assumed however that all bills are rediscounted as soon as they reach for her is at times it suits the Bints to held up the bills in anticipation of a full in the London. Product fields in elither and expenses and exist discount rate while on occasions allowly limbs not by get a it of sale.

The Brake place the modern is for it is follow

- (2) halo of death and telegraphic tracs for payable in Israin, and elembte of the line.

### JOINT STOCK BANKS.

Previous to 1906 there were few Banks of this description operating in India, and such as were then in existence were of comparatively small importance and had their business confined to a very restricted area. The rapid development of this class of Bank, which has been so marked a feature in Banking within recent years, really had its origin in Bombay and set in with the establishment of the Bank of India and the Indian Specie Bank in 1906 After that time there was a perfect stream of new flotations, and although many of the new Companies confined themselves to legitimate banking business, on the other hand a very large number engaged in other businesses in addition and can hardly be properly classed as Banks

These Banks made very great strides during the first few years of their existence, but it was generally suspected in well informed circles that the business of many of the Banks was of a very speculative and unsafe character and it was a matter of no great surprise to many people when it became known that some of the

Banks were in difficulties.

The first important failure to take place was that of the People's Bank of India and the loss of confidence caused by the failure of that Bank resulted in a very large number of other failures, the principal being that of the Indian Specie Bank

Since those events of ten years ago confidence has been largely restored. But in April 1923 the Alhance Bank of Simla suspended payment and is now in voluntary liquidation. The effect of the failure of this old established. Bank might have been disastrous but for the prompt action of the Imperial Bank which dealt with the situation in close association with the Government of India. The Imperial Bank undertook to pay the depositors of the Alliance Bank 50 per cent of the amounts due to them. A panic was averted and a critical period was passed through with little difficulty.

During 1923 the Tata Industrial Bank, which was established in 1918, was merged in the Central Bank of India.

The following shows the position of the better known existing Banks as it appears in the latest available Balance Sheets ---

## INDIAN PRIVATE BANKERS AND SHROFFS.

Indian private Bankers and Shroffs flourished in India long before Joint Stock Banks were ever thought of, and it seems likely that they a number of the bills they already hold to the will continue to thrive for some very considerable time to come The use of the word and the Banks accept such bills freely to an 'Shroff' is usually associated with a person who charges usurious rates of interest to impecumous people, but this is hardly lair to the people known as "shroffs" in banking circles, as there is no doubt that the latter are of very great assistance to Banks in India Under present conditions the Banks in India Can every which the Banks are prepared to discount bills nope to be able to get into sufficiently close touch with the affairs of the vast trading community in India to enable them to grant accommodation, and past experience munity in India to enable them to grant accom- they grant accommodation, and past experience modation to more than a few of these traders has shewn that the class of business above direct and it is in his capacity as middleman referred to is one of the safest the Banks can direct and it is in his capacity as middleman that the shroff proves of such great service In this capacity also he brings a very con siderable volume of business within the scope of the Presidency Banks Act, and enables the based on the rates at which they in turn can Presidency Banks to give accommodation discount the bills with the Banks and neceswhich, without his assistance, the Banks would sarily vary according to the standing of the bornot be permitted to give The shroft's position rower and with the season of the year. Genesa an intermediary between the trading cominally speaking, however, a charge of two annas munity and the Banks usually arises in someper cent per mensem above the Bank's rate of thing after the following manner. A shopleeper in the bazaar, with limited means of his in Bombay to a first class borrower. Rates own, finds that, after using all his own money, he still requires say Rs 25,000 to stock his shop suitably. He thereupon approaches the shroff, and the latter after very careful inquiries as to the shopkeeper's position grants the accommodation, if he is satisfied that the business is sale. The business, as a rule, is arranged through a hoondee broker, and in the case referred to the latter may probably approach about ten shroffs and secure accommodation from them to the extent of Rs 2,500 each A noondee usually drawn at a currency of about 2 months is almost invariably taken by the shrofts in respect of such advances.

meet out of their own money, and it is at this extent

engage in.

The rates charged by the shrofts are usually m Bombay to a first class borrower. Rates in Calcutta and Madras are on a slightly higher scale due in a great measure to the fact that the competition among the shroffs for businesis not so keen in these places as it is in Bombay -

The shroffs who engage in the class of business above described are principally Marwaries and Multanis having their Head Offices for the most part in Bikaner and Shikarpur, respectively, the business elsewhere than at the Head Offices being carried on by "Moonims" who have very wide powers

It is not known to what extent native bankers and shroffs receive deposits and engage in ex-A stage is reached however when the demands change business throughout India, but there is on the shroffs are greater than they are able to no doubt that this is done to a very considerable

### THE BANK RATE.

on other securities or discounts are granted as thon is granted at the official rate or even less

Formerly each Presidency Bank fixed its a rule at a slightly higher rate Ordinarily own Bank Rate, and the rates were not uniform, such advances or discounts are granted at from Now the Imperial Bank fixes the rate for the one-half to one per cent over the official rate, whole of India The rate fixed represents the but this does not always apply and in the monate charged by the Banks on demand loans soon months, when the Bank rate is sometimes against Government securities only and advances monthal, it often happens that such accommodations other securities or discounts are granted at the official rate or again less

The following statement shows the average Bank Rate since the Imperial Bank was constituted.

by a Railway Board, consisting of a Chairman to advise the Local Governments. Its dutics and two members with a Secretary. The do not end there The future development of Board was formally constituted in March 1905 rullways depends largely on the Government of The Constituted in March 1905 rullways depends largely on the Government of The Constituted in March 1905 rullways depends largely on the Government of The Constitution of the Constitut made subordinate to the The Board was Government of India in which it was represented Department of Commerce and Industry of policy and economy affecting all the lines. Its administrative duties included the construction of new lines by State agency, the carrying general supervision over the working and expenditure of the Company's lines Certain minor changes have taken place from time to time since the constitution of the Railway Board In 1908, to meet the complaint that the Board was subjected to excessive control by the De-partment of Commerce and Industry, the powers of the Charman were increased and he was given the status of a Secretary to Government with the right of independent access to the Viceroy, he usually sat in the Imperial Legislative Council as the representative of the Rail-In 1912 in consequence of comway interest plaints of the excessive interference of the Board with the Companies, an informal mission was undertaken by Lord Incheape to reconcile differences. Various changes were introduced during the years 1912-1920 such as the modification of the rule that the President and members of the Railway Board should all be men of large experience in the working of railways due to the importance of financial and commercial considerations in connection with the control of Indian Railway policy. This decision was, however, revised in 1920 and an additional appointment of Financial Adviser to the Railway Board created instead. The question of the most suitable organization was further fully examined by the Acworth Committee in 1921 and a revised organization which is described later was introduced from 1st April 1924.

Some of the difficulties - involved in constitution of a controlling authority for the railways of India may be realized from a study of the "Notes on the Relation of the Govern-ment to Bailways in India" printed as an appendix to Yolume I of the Annual Report by the Railway Board on Indian Railways notes bring out the great diversity of conditions prevailing which involve the Railway Department in the exercise of the functions of—

(a) the directly controlling authority of the birte-worked systems aggregating 16,499 miles m on the 31st March 1929,

(b) the representative of the predominant owning partner in systems aggregating 29,451

(c) the guarantor of miny of the smaller com. panies, and

(d) the statutory authority over all railways ın India.

Moreover in all questions relating to railways or railways and to undertake work on the many

question of the organization and working of the Governments are concerned, the Railway Do-Indian Railways, and he recommended that partment is called upon to watch the interest of system should be replaced the Central Government and is frequently asked India and the Railway Department is therefore called upon to plan out schemes of develop-ment, to investigate and survey new lines and It prepared the railway programme of to arrange for financing their construction expenditure and considered the greater questions evolution of a satisfactory authority for the administration of these varied functions has proved extremely difficult and the question was one of those referred to the Railway Committee out of new works on open lines, the improve(1920-21) presided over by Sir William Acworth
ment of railway management with regard who recommended the early appointment of a
both to economy and public convenience, the Chief Commissioner of Railways whose first
arrangements for through traffic, the settlement duty should be to prepare a definite scheme
of disputes between lines, the control and for the reorganization of the Railway Departpromotion of the staff on State lines, and the
ment and Mr C D. M. Hindley, formerly Agent of the East Indian Railway and Chairman of the Calcutta Port Trust, was appointed Chief Commissioner on November 1st, 1922

The principal constitutional change involved in this appointment is that the Chief Commissioner who takes the place of the President of the Railway Board is solely responsible—under the Government of India—for arriving at decisions on technical matters and for advising the Government of India on matters of railway policy and is not, as was the President, subject to be out-voted and over-ruled by his colleagues on The detailed re-organization of the the Board Railway Board in accordance with the Chief Commissioner's proposals required careful consideration but one of the most important of his recommendations namely the appointment of a Financial Commissioner was considered of partionlar urgency and the Secretary of State's saution was therefore obtained to the appointment with effect from 1st April 1923. While in the person of the Chief Engineer the Railway Board has always had available the technical advice of n senior Civil Engineer in Mechanical Engineering questions it has had to depend on outside assistance The disadvantages of this arrangement have become increasingly evident and was therefore decided with effect from November 1st, 1922, to create the new appointment of Chief Mechanical Engineer with the Railway Board

The reorganization carried out in 1924 had for one of its principal objects the relief to the Chief Commissioner and the Members fron all but important work so as to enable them to devote their attention to larger questions of railway policy and to enable them to keep in touch with Local Governments, rulway administrations and public bodies by touring to a greater extent than they had been able to do in the pist

This object was effected by the following new posts which in some cases supplemented the existing ones and in other cases replaced them Directors of Civil Engineering. Mechanical Engineering, Traffic, Establishment and Hinnice and seven Deputy Directors working under

The necessity of some central organization to co-ordinate the publicity central carried out on extra municipal tramways in which Provincial forms of radways publicity which can be less

Burma Railways

The Burma Railway is an isolated line, and although various routes have been surveyed there is little prospect of its being connected with the Railway system of India in the near,

said -" During 1914-15 extensive survey operations were carried out to ascertain the best alignment for a railway connection along the coast route between Chittagong and certain stations on the Burma Railways south of Mau-A rival route via the Hukong Valley between the northern section of the Bengal Railway and the section of the Burma Railways north of Mandalay was to have been surveyed during the following year but was postponed because of the war. It is now proposed to commence this survey during the coming cold weather, and on its completion, Government will have sufficient information to enable them to decide which route shall be adopted Thus no arrangements for the conadopted struction of a line have yet been made nor has any concession been granted, but it is probable that the line selected will be built at the cost of Government and worked by one or other or the main lines which it will connect. It was commenced as a state Railway and transferred in 1896 to a Company under a guarantee From January 1st, 1929, its working has been taken over by the State Mileage open

### INDIA AND CEYLON.

The possibility of connecting India and Cey-coast route appears to be the best one but ion by a railway across the bank of sand extendant present would not be remunerative. Ins ing the whole way from Rameswaram to Mannar would start from Chittagong, has been reported on from time to time, and terminus and headquarters of the Assum-since 1895 various schemes having been sug- Bengal Railway and a scaport for the prolince gested.

The South Indian Railway having been ex tended to Dhanushkodi, the southernmost point of Rameswaram Island, and the Ceylon Gov-ernment Railway to Talaimannar, on Mannar Island, two points distant from each other about 21 miles across a narrow and shallow terminal stations by a railway constructed on a solid enbankment raised on the sand bank known as "Adam's Bridge," to supersede the ferry steamer lervice which has been established between these two points, is one of the schemes that has been investigated

In 1913, a detailed survey was made by the South Indian Railway Company, and the project contemplates the construction of a causeway from Dhanushkodi Point on the Indian side to Talaimannar Point on the Ceylon side, a length of 20.05 miles of which 7 19 will be upon the dry land of the various lands, and 12 80 will be in water. The sections on dry land will consist of low banks of sand pitched with coral and pre-The section through the sea sent no difficulty will be carried on a causeway which it is pro-posed to construct in the following way. A double row of reinforced concrete piles, pitched at 10 feet centres and having their inner faces 14 feet apart, will first be driven into the sand These piles will then be braced together longitudinally with light concrete arches and chains and transversely with concrete trees, struts and chains Behind the piles slabs of reinforced concrete will be slipped into position, the bottom slabs being sunk well into the sand of the sea bottom Lastly, the space enclosed by the slabs will be filled in with sand

The top of the concrete work will be 'carried to six feet above high water level, and the raiss will be laid at that level The sinking of the piles and slabs will be done by means of water This causeway, it is expected, will cause the suspended sand brought up by the currents, to settle on either side bringing about rapid accretion and eventually making one big island of Rameswaram island and Mannar island

The route runs southwards through the Chittagong district, a land of fertile rice fields intersected by big rivers and tidal creeks and it crosses the Indo-Burma frontier, 94 miles from the town of Chittagong For about 160 miles further it chiefly runs through the fertile rice lands of Arrakan and crosses all the big tidal rivers of the Akyab delta. These include the Kalidan river which drains 4,700 miles of country and even at a distance of about 30 miles from its mouth is more than half a mile wide About 260 miles from Chittagony the railway would run into the region of mangrava swamps which fringe the seaconst north and south of the harbour of Krukkphu stretching out into the mangrove swamps like ribs from backbone Innumerable spurs of the Arrakan Yoma have to be crossed Yoma is a mountain ridge which extends from Cape Negrais northwards until it loses itself in a mass of tangled hills east of Akyab and Chittizong At its southern end the height of the ridge is insignificant but it has peaks as high is 4,000 feet before it reaches the sititude of Sandway and further north it rises much higher. It is a formidable obstacle to railway communication between India and Burma This route is estimated to cost about \$7,000,000 and would have to be supplemented by branch lines to Akyeb where there is at present a considerable rice traffic and the cost of this would have to be added to the £7,000,000 already referred to

The other coutes examined have been the Hukong Valley route and the Manipur route which were surveyed by the late Mr R A War many years ago The Manipur route was estimated to cost about £3,000,000 as it has to cross three mam ranges of hills with summit levels of 2,650, 3,600 and 8,000 feet long. Altogether there would be about four miles of tunnelling through the three main ridges and through other hills and more than 100 miles of expensive undulating railway with grades as steep as 1 in 50 and 11,000 feet of aggregate use and full. The Hukong valley route is only about 284 miles long and it presents fewer engineering long and it presents fewer engineering difficulties than either the Coast or the Mini-Indo-Burma Connection.

The raids of the Emden in the Bay of Bengal in 1914, and the temporary interruption of has to be crossed and this can be reconstructed communications between India and Burma, with a summit tunnel 5,000 feet long 2. a stimulated the demand for a direct railway conhection between India and Burma Govern-miles of very heavy work and only about 1 roofs. One hundred and fifty roate nection between India and Burma Governmiles of very heavy work and only about 4 rooft
ment accepted the position and appointed aggregate of rise and fall. The Hulous V list
Wr Richards, V Inst. C D, to be the engineerin-charge of the surveys to determine the best is not a practical financial proposition and let's
route for a rulway from India to Burma; The may be ruled out of consideration.

### MANGANESE ORE.

This industry was started some thirty serious fall took place, to 537,844 tons with a cars ago by quarrying the deposits of the value of £726,954. This was followed by a gagapatam district, and from an output of disastrous fall in 1932 to 212 604 tons with a 4 tons in 1892, the production rose rapidly value of £140,022. In 1933 the output rose of £140,022. years ago by quarrying the deposits of the Vizzgapatam district, and from an output of 674 tons in 1892, the production rose rapidly to 92,008 tons in 1900 when the richer deposits in the Central Provinces were also attacked, and are now yielding a larger quantity of ore than the Vizagapatam mines The most important deposits occur in the Central Provinces, Madras, Central India, and Mysorevinces, anarras, central india, and mysorc—the largest supply coming from the Central Provinces. The uses to which the ore is put are somewhat varied The peroxide is used by glass manufacturers to destroy the green colour in glass making, and it is also used in porcelain painting and glazing for the brown colour which it yields The ore is now used in the manufacture of ferro-manganese for use in steel manufacture Since 1904, when the total output was 150,190 tons, the progress of the industry has been remarkable owing to the high prices prevailing

ı

Record Output in 1927 -Before the vear the record production of manganese-ore in India took place in 1907 when 902 201 tons were raised. In 1926 the output rose to 1,014,928 tons valued at £2,463,491 to b Indian ports, the rise in output was, however accompanied by a decrease in value. In 1927 the production rose to the highest figure vet resolved 1,199,582 tons, accompanied by a resolved in 199,582 tons. recorded, 1,129 353 ton-, accompanied by a rise in value to the peak figure of £2,703 068 fo b Indian port. During the veur 1928, the upward tendency was not mantainel, the output filling to 978,449 tons value di £2,198 897 fo b Indian ports. In 1929, the output resemble that not recommended in the signify to 994 279 tons, but the value fell heavist that has noter been elsed since the output tell substantially to 829,946 tons with a heavy fall in total cessition of production in the desired since the stantially to 829,946 tons with a heavy fall in total cessition of production in the desired since the stantial total cessition of production in the desired since the stantial total cessition of production in the desired since the stantial total cessition of production in the desired since the stantial total cessition of production in the desired since the stantial total cessition of production in the desired since the stantial total cessition of production in the desired since the stantial total cessition of production in the desired since the stantial total cessition of production in the desired since the stantial total cessition of production in the desired since the stantial total cessition of production in the desired since the stantial total cessition of production in the desired since the stantial total cessition of production in the desired since the stantial total cessition of production in the desired since the stantial total cessition of production in the desired since the stantial total cessition of production in the desired since the stantial total cessition of the st stantially to \$29,046 tons with a heavy fall in total cossition of production in the Nalue to £1,200,236. In 1931 a still more district and almost total cost iton in Bora dis

slightly to 218,307 tons but the value fell to £123,171 These are the smallest quantities and values reported since 1901, when the output was 120,891 tons valued at £122,831 In 1905 the output was 247,427 tons valued at £221432, since when the smallest production was 450,416 tons in 1915 valued at £929,546, whilst the smallest value was in 1909 when a production of 644,660 tons was valued at £603 905 magnitude of this catastrophe to the Indian manganese industry is perhaps best realised from the fact that whilst the quantity of the production in 1933 was a little over one-fifth of that of the peak year of 1927, the value was less than one twenty second part of the value of the 1927 production In fact in none of the major Indian miner if industries have the effects of the slump leen so seriously iclt as in the manganese industry

The slight increase in 1933 is due to increase in Sandur State (22 237 tons) Keonjihar State (15,499 tons) Vizarapit in (8619 tons) and (15,499 tons) Vizarrpit im (8619 tons) and singhbhum (5181 tons), with smalloutputs from Bonu State and Kurnool, largely belanced by decreases in the Central Provinces. In the Central Provinces the production fell from 302 344 tons in 1932 will be a set than the output. 28,789 tons in 1933 which is best than the output of 1900 the year in which the mining industry commenced in the Cintral Provinces. when the output was 35,356 tons During 1912 and 1933 the majority of min - in the Crite i

### GOLD.

1905 when 616,758 ounces were raised In 1906 the quantity won was 565,208 ounces and this figure fell to 535,085 ounces in 1907. The figures for the latter years reveal a small improvement. The Kizam's mine at Hutti in Hyderabad comes next, but at a respectable distance, to the Kolar gold field This mine was opened in 1903. The only other mines from which gold was raised were those in the Dharwar district of Bombay and the Anantapur district of Madras. The Dharwar mines gave an output of 2,993. ounces in 1911 but work there ceased in 1912. The Anantapur mines gave focis first output of gold during the year 1010. the amount being 2,532 ounces, valued at Rs. 1,51,800 Gold mining was carried on in the North Arcot district of Madras from 1893 fill and 216 ounces of gold were obtained in 1904. The average number of persons employed on the amount steadily increased from year to the Kolar Gold I'led during 1933 was 20 263

The greater part of the total output of gold (sear and reached 8,145 ounces in 1909 but in India is derived from the Kolar gold field in subsequent years until in 1922 in Mysore. During the last decade the production of this mine reached its highest point in 1925 when 616,758 ounces were raised In Central Provinces, and the United Provinces is obtained by washing Gold washing Is carried on in a great many districts in India, but there is no complete record of the amount obtained in this way There was a trivial fall in the total Indian gold production from 330,488 8 02s valued at Rs 2,08,01,943 (£,1,340,885) in 1931 to 329,681 7 ors valued at Rs 2,53,51,438 (£1,906 12)) in 1932 In 1931 the gradual secular decline in the total Indian sold production was temporarily arrested with an output of 330,488 8 oza valued at Rs 2,0801,047 330,489 8 oza valued at Re >>>>>>> 8 oz. valued at Re 2,050,037 (£1,540,895), followed by a trivial full again in 1932, when the output was 329,681 7 ozz valued at Re 2,53,51,438 (£1,906,123) In 1933 there was an increase to 356,108 3 ozz valued at Re 2,7640,071 (£2,078,201) This is a Kenlle of the light page of gold, the 1900, the highest yield (2,854 onnees) being ob- it suit of the stimulus of the high price of gold, the tained in the year 1898. The Kyaukparat mine value of the 1933 output being the highest in in Upper Burma was worked until 1903, when true of straing since 1920. It is interesting the pay chute was lost and the mine closes to note that the output of 1921 which was down. In 1902 dredging operations were valued at £2,050,575 a figure very close to that started on the Irrawaddy river near Myitkyina, of the 1933 production, was 432,722 6 ozs and 216 ounces of gold were obtained in 1904.

### PETROLEUM.

Petroleum is found in India in two distinct some small oil springs have been discovered, eas—one on the east, which includes Assam, attempts to develop them have not hitherto areas—one on the east, which includes Assam, Burma, and the islands off the Arakan coast This belt extends to the productive oil fields of Sumatra, Java and Borneo The other area is on the west, and includes the Punjab and Baluchistan, the same belt of oil-bearing rocks being continued beyond the borders of British India to Persia Of these two the eastern area is by far the most important, and the most successful oil-fields are found in the Irrawaddy Valley Yenangyaung is the oldest and most developed of these fields Native wells have developed of these fields Native wells have been at work here for over 100 years, and to 1886, prior to annexation of Upper Burma, the output is estimated to have averaged over 2 million gallons a year. Drilling was begun in 1887 The Yenangyat field yielded a very small supply of petroleum before 1891, in which year drilling was started by the Burma Oil Company. Singu now holds the second place among the oil-fields of India. Petroleum was struck at the end of 1901, and in 1902. was struck at the end of 1901, and in 1903, 5 million gallons were obtained. In 1907 and 1908 the production of this field was 48 million gallons, and after a fall to 312 million gallons in 1910 it rose to 562 million gallons in 1912 m 1910 it rose to 56‡ million gallons in 1912 Several of the islands off the Arakan coasts are known to contain oil deposits but their value is uncertain. About 20,000 gallons were obtained from the eastern Barongo Island near Akyab, and about 37,000 gallons from Ramri Island in the Kyaukpyu district during 1911. Oil was struck at klinbu in 1910, the production for that year being 18,320 gallons which increased to nearly 4 million gallons in 1912. The existence of oil in Assam has been known for many years and an oil suring was known for many years and an oil spring was struck near Makum in 1867 Nothing more, however, was done until 1883, and from that year up till 1902 progress was slow. Since that year the annual production has been between 2½ and 4 million gallons

On the west, oil springs have been known for many years to exist in the Rawaipindi and other districts in the Punjab. In Baluchistan for many years to exist in the Rawalpindi and gas during the year was 8,729,928 gallons, of other districts in the Punjab. In Baluchistan which 8,172,197 gallons were produced in geological conditions are adverse, and though Burma and 557,731 gallons in the Punjab

been successful

The world's production of petroleum in 1926 amounted to nearly 150 million long tons, of which India contributed 0 72 per cent In 1927, this figure jumped to some 172 million long tons, of which the Indian proportion, on a practically stationary production, fell to 0 64 per cent In 1928 there was another substantial rise in the world's production, which reached the figure of over 181 million tons In 1929, there was another jump to over 202 million tons, but in 1930 the world's production fell to about 1932 million tons, in 1931 to about 187 million tons, and in 1932 to about 179 million tons, whilst in 1933 the production rose again to about whilst in 1933 the production rose again to about 198 million tons Decreases were shown by Columbia, Trinidad, India, Germany, Egypt and Canada All other important producers showed an increase in production, by far the largest amount being due to the United States. The United States contributed 62 5 per cent of the world's supply in 1933, Russia 10 6 per cent and Venezuela 8 3 per cent. In 1928, India contributed 0 64 per cent, which fell to 0 60 per cent in 1929 and rose to 0 62 in 1930 0 63 per cent. In 1923, and 0 63 per cent. In 1932, and 0 64 per cent. In 1932, and 0 65 per cent. In 1932, and 0 65 per cent. In 1932, and 0 65 per cent. per cent in 1931 and 0 64 per cent in 1932, and fell again to 0.62 per cent in 1933, her position on the list of petroleum producing countries fell from 11th in 1929 to 12th in 1930 to 1933, her place being taken by Trinidad

The production of petroleum in India (including Burma) fell slightly from 308,606,031 gallons in 1932 to 300,009,022 gallons in 1933. The decrease in 1932 represents a considerable decrease in the output of Assam and the Punjab, and of a small proportionate decrease in the production of Burma This decrease in output in 1933 was accompanied, however, by a largingrase in value amounting to Re 1,18,24,818 (£889,084) or 23 3 per cent, an increase much in excess of the decrease of 1932 brought about

by the world depression

nber, Graphite and Mica —Amber is found any small quantities in Burma, Graphite and in small quantities in various places little progress has been made in mining pt in Travancore The total output in 1929 India has for many years been 39 tons eading producer of mics, turning out more half of the world's supply. In 1914, owing he war, the output was only 38, 189 cwts pared with 48,650 cwts in 1913 Owing to ssary restrictions with regard to the export arca, the output fell off considerably in the 1915, but subsequent demand in the United gdom for the best grade of ruby mica led considerable increase in production during following years

here was a marked rise in the declared pro-non of mica from 32,713 cwts valued at 14,35,401 (£107,925) in 1932 to 41,075 cwts ied at Rs 16,82,045 (£126,470) in 1933 As been frequently pointed out, the output res are uncomplete, and a more accurate of the size of the industry is to be obtained a the export figures In the years 1926 1927 the export figure was approximately ble the reported production figure, whilst he years 1928 and 1929 the quantity exported more than double the reported production 1930 the recorded exports were, however, some 57 per cent in excess or the reported duction, in 1931 36 per cent in 1932 43 per t, and in 1933 some 45 per cent, in excess he United States of America and the United igdom, which are the principal importers of tan mica, absorded respectively 24.0 per cent
47 6 per cent during 1932, and 84 3 per
t and 40 8 per cent during 1933 Germany
k 10 6 per cent and 10 7 per cent respecily, of the total quantaties exported during
years 1932 and 1933 The average value
the exported must describe the form the exported mica decreased slightly from 71 2 (£5.4) per cwt in 1932 to Rs 70 7 8) per cwt in 1933 The exports rose from 021 cwts valued at Rs 33,48,948 (£251,800) 1932 to 57,717 cwts valued at Rs 40,92,033 07,671) in 1933 The value for 1932 is the rest total value recorded since 1915-16 when · value of the mica exports was £208,496

Tin. Copper, Silver and Lead.—Following series of years of practically continuous inase, a slight decrease in the production of ore in Burma was reported for the year 1931, ring which the output amounted to 4,255 2 is valued at Rs 35,07,380. In 1932, however, are was again an increase in production to 25 tons valued at Rs 45,09,995, and in 1933 4,960 4 tons valued at Rs 70,89,994 (£533,082) is is the highest quantity and total value yet corded in any one year. The considerable corded in any one year. The considerable rease in the total value is, of course, mainly e to the rise in the price of the metal resulting m the tin restriction scheme in operation in e five leading tin-producing countries Malaya, therlands East Indies, Bolivia, Nigeria and im a scheme to which India is not an adherent le increase in output of some 485 tons is the lance of an increase from Mergui and Mawchi the Southern Shan States and a decrease from voy Milling operations were suspended at ruchi in August 1927 pending the installation additional plant and further development lling was resumed in February 1930 and this plants the large increases of 1930 to 1933 production was recorded until 1913.

The total figure for 1933 includes 1,738 5 tons from Mawchi calculated to be the proportion of tin-ore in 3,050 tons of concentrates derived from mixed wolfram-scheelite-cassiterit- ore, these concentrates are assumed to contain 4. per cent of wolfram and 57 per cent of the territe. There was no reported output of block to

Imports of unwrought tin fell from 49,279 cwts valued at Rs 47,50,341 (£357 16~) in 1932 to 41,655 cwts valued at Rs 52 96 4 14 (£398,230) in 1933 over 97 per cent of the imports came from the Straits Settlements.

In contrast with the increase in the producfor contrast with the increase in the production of silver from the Bawdwin mines of Upper Burma, amounting to 1,400,201 ozs recorded during the four years, 1925 to 1928, the following years 1929, 1930 and 1931 were marked by decreases amounting to 124,211 ozs, 226,311 ozs, and 1,153,806 ozs respectively In 1932 and 1933, however, there were small increases again, amounting to 98,556 ozs and 53,504 ozs respectively. These variations in quantity were accompanied by a small fall of quantity were accompanied by a small fall of value in 1929, marked falls in 1930 and 1931, and a marked rise in 1932, and a further rise in 1933 The output of silver obtained as a bve-product from the Kolar gold mines of Mysore showed a fall of some 1,600 ozs The amount of silver bullon and com exported during the year was 58,328,890 ozs valued at Rs 7,00 38,590 (£5,266,059) as compared with 34,664,148 ozs valued at Rs 4,15,61,144(£3,124,898) during 1932

The production of lead-ore at the Burma Corporation's Bawdwin mines in Burma, in reversal of the downward trend since 1930, increased from 372,586 tons in 1932 to 454,791 tons in 1933, and the total amount of metal extracted from 71,202 tons of lead (including 642 tons of antimonial lead) valued at Rs 1,09,95,587 (£826,736) in 1932 to 72,045 tons (including 1,185 tons of antimonial lead) valued at Rs 115,61,915 (£869,317) in 1933 The quantity of silver extracted from the Bawdwin ores rose slightly from 5,998,956 ozs valued at Rs 62,32 915 (£468,640) in 1932 to 6,054,047 oz. valued at Rs 65,74,695 (£494,338) in 1933 The value of the lead per ton rose from Rs 154 5 (£11 6) to Rs 160 5 (£12 07) whilst the value of the silver per ounce rose from Rs 1-0-7 (18 75d) to Rs 1-1-5 (19 6d) in the year under review The ore reserves in the Bawdwin miners collegisted on the left Fig. 1922 \*\* totalled\* as calculated on the 1st of July, 1933, totalled 4,183,792 tons, aganst 4,126,179 tons at the end of June, 1932, with an average composition of 25 5 per cent of lead, 15 5 per cent of zinc, 0 68 per cent of copper, and 19 6 ozs of silver per ton of lead Included in this reserve are 37,000 tons of copper-ore. During the veir development work in the Meingthe section, discovered in 1930, continued to yield settle. factory results

Magnesite -The output of magnesite showed an increase of 1,342 tons accompanied by an increase in value of Rs 24,925 (£1,674). The increase was due to a large increase from My-ord State, partially balanced by a decrease in the output of the Salem district, Madras

Zinc.—A monograph on zinc ores issued by the Imperial Institute in 1917 says that during the past fifty years zinc ores have received but little attention in India and no

production of zinc concentrates by the Burma Corporation, Limited, in the Northern Shan States, fell from 51,455 tons valued at Rs 15,09,298 in 1932 The slight rise in the diamond, ruby, sapphire, spinel, tourmalire and amber The production of diamonds in value per ton is parallel with a similar rise in the Northern Shan States, rose to 61,432 tons (oncentrates by the Burma Corporation, Limited, in the Northern Shan States, rose to 61,432 tons (alued at Rs 30,82,944 (£231,800) recovering thereby nearly all the ground lost since 1928 (output 64,122 tons), though the value is still greatly below the value in the peak year namely 2559,412, in 1928 The slight rise in the value sper ton is parallel with a similar rise in the value of spelter The exports during the year under Ruby Mines. Limited, ultimately decided to go 2559,412, in 1928 The single rise in the value in 1920 by a marked grop in value, note wherese per ton is parallel with a similar rise in the price to a serious decline in the industry. The Burma of spelter The exports during the year under Ruby Mines, Limited, ultimately decided to go review amounted to 64,050 tons valued at Rs 32,02,500 (£240,789) against, 49,950 tons valued at Rs 24,97,500 (£187,782) in the precedured for sale in September, 1926 The skeleton valued at Rs 24,97,500 (£187,782) in the precedured for sale in September, 1926 The skeleton valued at Rs 24,97,500 (£187,782) in the precedured for sale in September, 1926 The skeleton valued at Rs 24,97,500 (£187,782) in the precedured for sale in September, 1926 The skeleton valued at Rs 24,97,500 (£187,782) in the precedured for sale in September, 1926 The skeleton valued at Rs 24,97,500 (£187,782) in the precedured for sale in September, 1926 The skeleton valued at Rs 24,97,500 (£187,782) in the precedured for sale in September, 1926 The skeleton valued at Rs 24,97,500 (£187,782) in the precedured for sale in September, 1926 The skeleton valued at Rs 24,97,500 (£187,782) in the precedured for sale in September, 1926 The skeleton valued at Rs 24,97,500 (£187,782) in the precedured for sale in September, 1926 The skeleton valued at Rs 24,97,500 (£187,782) in the precedured for sale in September, 1926 The skeleton valued at Rs 24,97,500 (£187,782) in the precedured for sale in September, 1926 The skeleton valued at Rs 24,97,500 (£187,782) in the precedured for sale in September, 1926 The skeleton valued at Rs 24,97,500 (£187,782) in the precedured for sale in September (Rs 24,97,500 (£187,782) in the precedured for sale in September (Rs 24,97,500 (£187,782) in the precedured for sale in September (Rs 24,97,500 (£187,782) in the precedured for sale in September (Rs 24,97,500 (£187,782) in the precedured for sale in September (Rs 24,97,500 (£187,782) in the precedured for sale in September (Rs 24,97,500 (£187,982) in the precedured for sale in September

refined copper 1,668 tons of this were sold of a system of co-operation with local miners, in the Indian market at an average price of and was assisted by some good finds of sapphires Rs 673 per ton In addition there was a production of 3,637 tons of yellow metal, the average selling price in India being Rs 719 per ton

During 1927, however, production fell in

Operations commenced on a revenue basis on January 1st 1929 During that year the ore produced amounted to 76,831 long tons valued at Rs 14,58,746 (£108,862) Of this Of this 75,174 short tons were treated in the mill and smelter, with the production of 1,635 long tons of refined copper ingots and slab-The copper was sold entirely in India at an average price of Rs 1,200 per long ton In 1930 the output increased to 123,749 long tons of copper-ore valued at Rs 24,35,571 (£180,413) Of this 134,162 short tons were treated in the mill and smelter and 1,625 short tons sent direct to the smelter with the production of 2,974 long tons of refined copper, of which 2,157 tons were sold in the Indian market and 540 tons were consumed in the new rolling mill, which was completed in July 1930, with the production of 712 tons of sellow metal (brass) cheets, which found a ready market in Calcutta

Since then in spite of falling prices the production of both mine and smelter has continued to expand In addition during 1933 there was an initial production of ore from Dhobani where a lode parallel to that at Mosaboni is being opened During 1933 the mine output increased to 201,515 long tone of copper-ore from Mosaboni and 207 long tons from Dhobani, making a total of 201,722 long tons, valued at Rs 22,12,966 (£166,388), against 175,010 long tons of copper ore in 1932 valued at Rs 25,09,080 (£188,652) 203,736 short tons of ore were treated in the mill and the production of refined copper amounted to 4,800 long tons against 3,448 tons in the previous year. 3,774 tons were consumed in the rolling milland 1 317 tons were sold in the Indian market at an average price of R= 599 per fon Operations in the rolling mill resulted in the production of 6,143 long tons of yellow metal

average assay value of 3 06 per cent of copper

Copper.—In 1931 the mine output was result that the value of the output in 1926 153,636 long tons of copper-ore valued at Rs 22,71,940 161,563 short tons of ore were lakh of rupees. This encouraging result was treated for a production of 4,069 long tons of effected by a rigorous economy and an extension

During 1927, however, production fell in value by over 14 lakes of rupees, due mainly to a decrease in the value of the sapphires and spinels produced, there having been a slight increase in the value of the rubles During 1928, there was another very large decline in value, amounting to over a lash of rupees, due to a severe drop in the value of the sapphires produced as before There was a slight increase in the value of the rubies. The value of the 1929 production was slightly above that of 1928, due to a considerable increase in the value of the rubles found, largely balanced by another large fall in the value of sapphires produced. In 1930 there was a further substantial fall in production and in total value, though the value per carat of the sapphires produced is the highest recorded for many years Judging from reports in the Rangoon Times this is due to the opening up by the Burma Ruby Mines, Ltd, of the new Pagoda mine at Kathe leading to the find of a fine sapphire of 630 carats and a star sapphire of 293 carats The find of a ruby of 100 carats was also reported

Since the liquidation of the Burma Ruby Mines, Limited, and the final cessation of the operations of this company in 1931, reliable statistics of production of gem stones in the Mogok Stone Tract have been unobtainable Work is still continued by local mmers but of this no statistics are available, in addition a certain amount of work is being done under extraordinary licenses For 1932 no returns are available except that a fine ruby of 17 carats was found at Chaunggyi near Mogok, and a fine applier of about 90 carats and a good star sapphire of 453 carats were mined at Kathe For 1933 the only return is of 1,103 carats of rubics from Kathe

Operations in the rolling mill resulted in the production of 6,143 long tons of villow metal the whole of which was sold in India at an iverage the whole of R s 631 per ton valued at Rs 92,000 (£6,917) The sapphire The total ore receives at the close of the year deposits of Kashmir have long been known, but 1933 amounted to 686,402 short tone with anion account of their high altitude they are worked as a regression of the production was reported from Udhampur, Kashmir State of 25,100 tolks (1 434 285 carats) of sapphire with corundum valued at Rs 92,000 (£6,917) The sapphire and the production was reported from Udhampur, Kashmir State of 25,100 tolks of Rashmir have long been known, but 1933 amounted to 686,402 short tone with anion account of their high altitude they are worked

only occasionally

### SALT.

There was a substantial increase in the total output of salt, amounting to some 102 0 0 tone, shared by Madras (48,954 tons), Northern India (19860 tons), Aden (16888 ton), I that (10,705 tons), and Bombay and Sind (10,124 tons,) Imports of salt into India dictional largely by 155,923 tons, all the countries of origin showing decreases excepting Germany

Note on the Mineral Vol LXIV).

# Stock Exchanges.

There are about 475 Share and Stock Brokers! in Bombay They carry on business on the Brokers' Hall, bought in 1887 from the funds of the Share and Stock Brokers' Association formed to familitate the negotiations and the sale and purchase of Joint Stock securities promoted throughout the Presidency of Bombay. Their powers are defined by rules and regulations framed by the Board of Directors and approved by the general body of Brokers | In November 1917 a second Stock Exclanate The Found has the power to stop business in was opened in Bombay, with its headquarter times of emergencies The official address in Apollo Street known as the Bombay Stock times of emergencies The

of the Secretary is Dalai Stree, Fort, Bombar. At first the admittance fee for a broker was Rs. 5 which was gradually raised to Rs 7,000 The fee for the Broker's card has increased In 1921 a number of cards were sold at Rs 40,000 each and the proceeds were employed to purchase an adjoining building for the extension of the business. The present value of the card is about Rs. 11,000.

# Chambers of Commerce.

Modern commerce in India was built up by the opening of the proceedings and the br t merchants from the west and was for a long business was the election of Sir Fazilibov time entirely in their hands. Chambers of Curimbhoy as the first President. The Con-Commerce and numerous kindred Associations were formed by them for its protection and assistance. But Indians have in recent years, taken a large and growing part in this commercial life. The extent of their particupation varies greatly in different parts of India, according to the natural proclivities and genus of different races Bombay, for instance, has led the way in the industrial and commercial regeneration of the new India, while Bengal, very active in other fields of activity, lags behind in this one. Arising from these circumstances we find Chambers of Commerce in Bombay, Karachi, Calcutts, Madras and other important centres, with a membership both European and Indian, but slongside these have spring up in recent years certain Associations, such as the Bombay Indian Merchants' Chamber and Bureau, of which the membership according to the natural proclivities and genius Chamber and Bureau, of which the membership is exclusively Indian These different classes of bodies are in no sense hostile to one another and constantly work in association

The London Chamber of Commerce in 1921 realizing the increasing attention demanded by the economic development of India, took steps to form an "East India Section" of their organization. The Indian Chambers work harmoniously with this body, but are in no sense affiliated to it, nor is there at present any inclination or their part to enter into such any inclination or their part to enter into such close relationship, because it is generally felt that the Indian Chambers can themselves achieve their objects better and more effectively than a London body could do for them, and on various occasions the London Chamber, or the East India Section of it have shown themselves out of touch with what seemed locally to be immediate requirements in particular matters

A new movement was started in 1913 by the Hon Sir Fazulbhoy Currimbhoy Ibra-him, a leading millowner and public citizen of Bombay, which aims at effecting great improvement in strengthening Indian com-mercial organization. Sir Fazulbhoy's original plan was for the formation of an Indian Commercial Congress The proposal met with ap-proval m all parts of India The scheme was delayed by the outbreak of war but afterwards received an impetus from the same cause and the first Congress was held in the 1915 Christmas holiday season, in the Town Hall, Bombay The list of members of the Reception Committee showed that all the important commercial associations of Bombay were prepared to cooperate actively.

business was the election of Sir Fazilihov Curimbhoy as the first President. The Congress resolved upon the establishment of Pn Associated Indian Chamber of Commerce and elected a Provincial Committee empowered to take the necessary steps to get the Association registered and to enrol members and carry on work The Congress also approved of the disfi constitutions

The following are the principal paragraphs of a Memorandum of Association and Statement of Objects of the new Associated Chamber as approved by the Congress -

- The name of the Chamber will be "Tar Associated Indian Chamber of Commerce "
- II The Registered Office of the Chamber Will be in Bombay
- The objects for which the Chamber is established are .-
  - (1) To discuss and consider questions concerning and affecting trade, com-merce, manufactures and the shipping interests, at meeting of delegates from Indian Chambers of Commerce and Commercial Associations or Bodies and to collect and disseminate information from time to time on matters affecting the common interests of such Chambers or Associations or Bodies and the commercial, manufacturing and ship-ping interests of the country
  - (2) To attain those advantages by united action which each Chamber or Association or body may not be able to accomplish in its separate capacity
  - (8) To organize Chambers of Commerce Commercial Associations or Bodies in different trade centres of the Country
  - (4) To convene when necessary the Indian Commercial Congress at such places and at such times as may be deter-mined by a Resolution of the Chamber

The Articles of Association provided "There shall be an annual meeting of the Associated Indian Chamber held at Bombay on a date to be fixed by the Executive Council in the month of February," or at some other time, and "semirepruary," or at some other time, and "semi-annual or special meetings". may be convened by the Executive Council or on the requisition of one-third of the total number of members addressed to the Secretary

The organization languished for lack of upport for some years until a number of merchants specially interested in Currency and Exchange questions revived it in 1926 at Della and 1927 at Calcutta, the initiative in the next activities halling, like the first movement, from Bombar The Commercial Congress held in Calcutton on 31st December 1926 and 1st and 1927 decided upon the formatic. The Congress was attended by several hundred delegates from all parts of India Mr (now Bombay The Commercial Congress held in the Hon Sir) D E Wacha, President of the Bombay Indian Merchants' Chamber, presided 2nd January 1927, decided upon the formatic as Chairman of the Reception Committee, at of a "Federation of Indian Chambers of

Commerce" and agreed to the registered office of this body being "at the place where the President for the year line his headquarters or where he directs it to be located " Among the objects for which the Federation is established are the following

- (a) To promote Indian businesses in matters of inland and foreign trade, transport, industry and manufactures, finance and all other economic subjects
- To encourage friendly feeling and unanimity among basiness community and associations on all subjects connected with the common good of Vice President Indian business.
- (c) To enter into any arrangement with any Government or authority supreme, municipal, local or otherwise that may seem conducted to the l'edertion's objects or any of them, and to obtain from any such Government or authority all rights, concessions, and privileges which the Federation may think it desirable to obtain and to carry out, exercise and comply; with any such arrangements, rights, privileges and concessions
  - To sell or dispose of the undertaking of the rederation or any part thereof for such consideration as the rederation may think fit and in particular for shares, debentures or securities of any other company having objects; altogother or in part similar to those of this Federation.
- (e) To take or otherwise acquire and hold shares in any other company having objects altogether or in part similar to those of this Federation.
- (f) To undertake and execute any trusts the undertaking of which may seem to the Federation desirable either gratuitously or othernise
- To draw, make, accept, discount, execute and issue bills of exchange, **(g)**

unrrants, debentures and other negotiable or transferable instruments or ··curitica.

The Rules provide for two classes of members, riz., numbers consisting of Chambers of Com-merce (Subscription Its, 700) and others consisting of Commercial Associations (Subscription Rs 150).

### Special Work.

One of the most important functions per-

A special department of the Bombay Chamber is its Statistical Department, which prepares a large amount of statistical returns connected with the trade of the port and of great importance to the conduct of commerce. The department consists of fourteen Indian clarks who, by the authority of Government, work in the Customs House and have every placed at their disposal by the Customs authorates They compile all the statistical information in connection with the trade of the port, in both export and import divisions, which it is desirable to record. No other Chamber in India does similar work

to the same extent. The Bombay Chamber publishes a Daily Arrival Return which shows the receipts into Bombay of cotton, wheat and seeds, and a Trade Return, which deals with trade by sea and shows in great detail imports of various kinds of merchandise and of treasure, while the same return contains particulars of the movements of merchant vessels.

The Chamber publishes twice a week detailed reports known as Import and Export mani-lests, which give particulars of the cargo car-ried by each steamer to and from Bombay.

Four statements are issued once a month. One shows the quantity of exports of cotton seeds and wheat from the principal ports of the whole of India. The second gives in detail imports from Europe, more particularly in regard to groy cloths, bleached cloths, Turkey red and scarlet cloths, printed and dyed goods, Bombay Seamen's Society R. J. F. Sulivan, yarns, metals, kerosene oil, coal, aniline dyes, Esq. The third shows, classified, the number of packages of piece-goods and yarns imported by individual merchants The fourth gives number of bales of cotton exported by each firm to each country during the month with a running total of the number of bales exported during the year

> Another "Monthly Return" issued by the Chamber shows clearances of a large number of important designations of merchandise. A return of "Current Quotations" is issued once a week, on the day of the departure of the kinglish mail, and shows the rates of exchange for Bank and Mercantile Bills on England and Paris, and a large quantity of general banking and trade information.

> The annual reports of the Chamber are substantial tones in which the whole of the affairs of the Chamber and the trade of the port during the past year are reviewed.

The Chamber has also a Messurement Despartment with a staff of 10, whose business is that of actual measurement of 'exports in the One of the most important functions perdocks before loading in steamers. Certificates formed by the Chamber is that of arbitration are issued by these officers with the authority in commercial disputes. Rules for this have of the Chamber to shippers and ship agents as been in existence for many years. been in existence for many years and have to the measurement of cotton and other goods, worked most satisfactorily. The decisions in bales or packages From the measurements are in all cases given by competent arbitrators given in this certificates the freight payable by the appointed by the General Committee of the Shippers of goods is calculated. The measurers chamber and the system avoids the great are in attendance on the quays whenever there expense of resort to the Law Courts season are on duty early and late The certificates granted show the following details

- (a) The date, hour and place of measurement
- (b) the name of the shipper:
- (c) the name of the vessel:
- (d) the port of destination;
- (e) the number and description of packages.
- (f) the marks:
- (q) the measurement, and in the case of goods shipped by boats;
- (h) the registered number of the boat;
- (1) the name of the tindal.

Certificates of weight and of origin are also issued by the Chamber,

The subscription for each member whose place of business is in Cocanada is Rs. 120 per annum, payable quarterly, and for each member whose place of business is elsewhere is Rs. 60 per annum, payable in advance. for each member whose place of business is elsewhere is Rs. 50. The subscription for each is Rs 120 per annum, payable quarterly, and for each member whose place of business is else-where is Rs 60 per annum, payable in advance The Committee usually meets once a month on the penultimate Thursday and the general body meets on the last Thursday.

> A Fortnightly Circular of current rates of produce, freights, and exchange is drawn up by the Committee.

# DEPARTMENT OF COMMERCIAL INTELLIGENCE AND STATISTICS.

into the Department of Commercial Intelligence with effect from the 1st December 1922. The joint department has its office at No 1, Council House Street, Calcutta It embraces two distinct classes of work: (a) the collection and dissemination of information connected with overseas trade which may be of use to Indian firms and (b) the compilation and publication of All-India statistics.

For some time past the Government of India have felt the necessity for the creation of a Central Statistical Research Bureau for the continuous analysis and interpretation of economic and statistical facts and phenomena and they have recently established the nucleus of a Statistical Research Bureau under the Director-General of Commercial Intelligence and Statistics, at their headquarters The Director-General is now stationed at the headquarters of the Government of India with a Deputy Director of Commercial Intelligence and a Deputy Director of Statistics at Calcutta and a new Deputy Director of Statistical Research at the headquarters.

Among the important publications for which the Director-General is responsible are the following annual volumes Review of the Trade of India, Statement of the Foreign Sea-borne Trade and Navigation of British India, Statistical Abstract for British India, Agricultural Statistics, Estimates of Area and Yield of Principal Crops and Indian Customs Tariff The department also publishes a weekly journal— The Indian Trade Journal the principal features of which are (a) with His Majesty's Trade Commissioners in information as to tariff change in foreign and the Dominions, and with Consular Officers in countries which affect Indian interests (b) various parts of the world And the yearly notices of tenders called for and contracts increase in its correspondence shows that it is notices of tenders called for and contracts

The Department of Statistics was reabsorbed | notifications affecting trade, (e) analysis of Indian trade statistics, (f) market reports, prices and trade movements of the staple exports and imports, (9) trade enquiries for securing trade introductions, (h) summaries of the leading features of consular and other trade reports, and (i) abstracts of the proceedings of the various Chambers of Commerce in India.

> The Department also administers the Con-MERCIAL LIBRARY AND READING ROOM located at No 1, Council House Street, Calcutta This was at first a small departmental library used for the purpose of answering enquiries, but in 1919 the Government of India agreed to the formation of a combined technological library of reference in Calcutta in place of the separate libraries attached to the Departments of Com-mercial Intelligence, Statistics, and Patents and Designs, and the resultant Commercial Library and Reading Room was placed under the admi nistrative control of the Director-General It has now been expanded into a first-class technical library containing over 15,337 volumes on different subjects of commercial, economic and industrial interest as well as Indian and foreign attailers and again and again. foreign statistical publications, and over 988 technical and commercial journals and market reports. Ordinarily books are consulted in the reports. Ordinarily books are consulted in the Library, but they are also available on loan upon deposit of value throughout India.

The Department works in close co-operation with Directors of Industries and other Government Departments in India, with the Indian Trade Commissioners in London and Hamburg placed by Government departments and public steadily being used more and more both by firms bodies, (e) crop reports and forecasts, (d) in India and by overseas firms interested in Government orders, communiques and other Indian exports.

### THE BRITISH TRADE COMMISSIONER SERVICE IN INDIA.

The British Trade Commissioners in India are | into personal relations with the Chambers of part of the world-wide Commercial Intelligence Organisation of the Imperial Government The Department of Overseas Trade, London, which is the headquarters of this organisation, is a joint department of the Board of Trade and the Foreign Office and was created in 1917 with the Foreign Office and was created in 1917 with the specific object of stimulating the overseas trade of the United Kingdom by securing commercial information from all parts of the world, by disseminating it to British manufacturers and exporters, by undertaking such special constructive activities as may be found possible, and by assisting traders in the removal of their difficulties. The Department has nothing to do with the regulation of trade. It passes no measures and makes no restrictive or regulative sures and makes no restrictive or regulative orders Briefly, the policy on which it is based is the policy of assistance without interference

The Department of Overseas Trade maintains a network of trained and experienced Commercial Intelligence Officers throughout the world, who forward a constant supply of commercial information to London and provide local assistance in the promotion of British economic inter-Those overseas officers who are stationed in the British Empire are members of the Trade Commissioner Service while Foreign countries are served by the Commercial Diplomatic Service forming part of the British Diplomatic Missions and by the Consular Service.

Sir (then Mr.) Thomas M. Amscough, OBE, was appointed His Majesty's Senior Trade Commissioner in India in January 1918 and opened an office in Calcutta in March of that year five years, owing to the pressing need for economy in the Public Service, he was singlehanded in covering this vast territory. In 1928, however, H M's Government sanctioned the opening of an office in Bombay and the creation of an addition-W. D M Clarke holds the appointment of H.M's
Trade Commissioner at Bombay and in 1985
Mr A. Schofield was appointed as H M's Trade
Commissioner at Calcutta The territory is The territory is now divided between the Calcutta and Bombay posts and this development allows the Senior Officer to travel almost continuously to any part of India which may call for his attention and to devote his time to some of the broader politicoeconomic problems which are becoming so important in view of the changing political conditions in India

Function of Commissioner.—The primary duty of the British Trade Commissioner comprises the collection of information in regard to opportunities that may arise within his territory for securing and developing trade by British manufacturers and merchants, both in the United Emgdom and other parts of the British Empire. He is, therefore, enjoined carefully to watch and report from time to time to the Board of Trade and the Governments of the Dominions concerned on all matters affecting the trade, industry and commerce of his area. His general functions are to maintain cordial relations with the governing authorities of his area , to enter tions of trade, etc , as they are able to afford

Commerce, Trade Associations, and similar bodies, and with the principal representative importers and local manufacturers, to usit the principal commercial centres, to report upon foreign competition, on financial and trade conditions, and new legislation affecting trade. to make an annual general report on the conditions and prospects of trade in his area, and to furnish special reports and monographs on particular questions which are likely to be of interest to British manufacturers and exporters He is also expected to supply a regular flow of commercial information of all kinds to his department, to maintain an active correspondence with firms in the United Kingdom or the Dominions who wish to extend their trade with his area and to give all possible assistance to the representatives of British firms who may visit his territory

Every effort is made by His Majesty's Trade Commissioners to keep in touch with British representatives and agents in India The offices are equipped with a complete range of directories and reference books of all kinds and information is available with regard to such matters as tion is available with regain to said in incompositions, port dues and charges throughout the world, etc. A library consisting of over 1,000 catalogues of the leading British manufacturers is maintained in Calcutta and facturers is maintained in Calcutta and Bombay, and firms desiring information with regard to specific manufacturers of particular machinery or processes are invited either to call personally or to communicate their requirements in writing It is hoped that local importers and buyers will co-operate by making a more extended use of the information available in the offices and by bringing to the attention of the British Trade Commissioners any cases where the interests of exporters from the United Kingdom or the Dominions may be adversely affected by foreign competition or othern re

For many years British traders have deplored the fact that there have not been available officials with commercial experience who could help them in volcing their difficulties and in meeting foreign competition. As a rule these complaints eulogized the Consuls of other countries and invited the attention of Government to their many virtues In response to this agitation the greatest care has been taken by the British Government to select, as their trade officers Overseas, men of sound commercial training and experience who have acquired some reputation in their respective spheres, and a comprehensive and businesslike organization has been built up at the Department of Overseas Trade, London, to deal with the information sent home It now rests with the British mersent nome It now rests with the British mer-cantile community, both at home and also Over-seas, to co-operate freely and frankly with the Trade Commissioners and to recognize the work they are doing in the Imperial interest by assisting them with such information and particulars with regard to foreign competing goods, condi-

In the early days of the textile industry the energies of the millowners were largely concentrated on the production of yarn, both for Indian supply, to erect more looms, and to the China market, and for the handlooms of Indian supply, to erect more looms, and to the China market, the growth of an indigenous Bombay than in other parts of India, and the industry - in China and the uncertainties in the China market, the growth of an indigenous Bombay than in other parts of India, and the industry - in China and the uncertainties in the China exchanges consequent on variations in the China exchanges consequent on variations in the United Provinces produced 7 3 per cent, the price of silver compelled the millowners to control of the cloth woven in India The United Provinces produced 7 3 per cent, the price of silver compelled the millowners to control for this purpose to supplement the control for this purpose to supplement the control for this purpose to supplement the control for this purpose to supplement the control for this purpose to supplement the control for this purpose to supplement the control for the produce more dyed and bleached goods. This practice has reached a higner development in Bombay than in other parts of India, and the Bombay Presidency produced in 1933 34 nearly 64 4 per cent of the cloth woven in India The United Provinces produced 7 3 per cent, the price of silver compelled the millowners to control for this purpose to supplement the control for the produce more dyed and bleached goods. This practice has reached a higner development in the China in the Ch

#### ANALYSIS OF WOVEN GOODS.

The following brief extract is taken from the statement of the quantity (in pounds and their equivalent in yards) and description of woven goods produced in all India, including Native States:—

The Indian Jute Mills Association now dembers of Committee — one of the most important, if not the most important, of the bodies amiliated to the Bengal Scott. Mr. C. G. C. Chamber of Commerce, was started under the following circumstances —In 1886 the exist-ing mills, finding that, in spite of the constant opening up of new works. Working results opening up of new works. Working results were not favourable, came to an agreement, with the late S. E. J. Clarke, Secretary to the Chamber of Commerce, as trustee, to work short time. The only mills which stood out of this arrangement were the Hooghly and beraisungs. The first agreement, for six berajguage The first agreement, for six months dating from 15th February 1886, was without renewed at intervals ubsequently n break for five years up to February 15, 1891 The state of the market at the time of the senewals dictated the extent of the short time, which varied throughout the five vents between 4 days a week 9 days a fortnight and 5 days a week. Besides short time, 10 per cent, of the sacking looms were shut down for a short period in 1890. An important feature of this agreement was a mutual undertaking by the parties not to increase their spinning power during the currency of the agreement, only a few exceptions being made in the case of a few incomplete new mills.

The present officials of the Association are: Chairman,-Mr. II II Burn

Mr. B. M Birla, Mr G M. Garrie, Mr S K. Soott, Mr C G Cooper, M.L C, Mr A

Wilson, Mr. John Scott Working days.—With the introduction of the electric light into the mills in 1896, the working day was increased to 15 hours, Saturdays included, which involved an additional amount of cleaning and repairing work on Sundays. In order to minimise this Sunday work and give them a free Sunday, an agitation was got up in 1897 by the Mill European assistants to have the engines stopped at 2 or 3 p.m. on Saturdays. The local Government took the matter up, but their action went no further than applying moral Suasion, backed by a somewhat half-hearted threat The Mill Association held meetings to consider the question and the members were practidays included, which involved an additional the ann association held meetings to consider the question and the members were practically agreed as to the utility of early closing on Saturdays, but, more suo, could not trust themselves to carry it out without legislation Unfortunately the Government of India refused to sanction the passing of a Resolution by the provincial Government under the Factory. Ant and the matter was dropped. Only a year Act and the matter was dropped. Only a year or two ago the Jute Mills Association in despair brought out an American business expert, Vi. J. H. Parks, to advise them on the possi-

bility of forming a jute trust with a view to about by the war, the quantity exported was exercising some control over the production and price of jute. Mr. Parks came, and wrote pigeon-holed because the Association promptly litaly took less, while the previous year no need to worry about the price of jute. (mainly via Dunkirk), Russia (144 Vialle vialle) was no need to worry about the price of jute. (mainly via Dunkirk), Russia (144 Vialle vialle) were, of course, no exports to enemy countries which took more than 27 per cent, in the five The Jute Industry. The working agreements referred to above which took more than 27 per cent. in the five of detail, but with the same object in view in the value accompanied by a decrease in the volume of exports was due to the very

of detail, but with the same object in view namely the restriction of production During the past 10 years a policy of curtailment of september of exports was due to the very output has been continuously in force By an agreement operating from October By an interesse in the volume of exports was due to the very september, october, November and December of September, October, November and December of the total complement of the trade, have the agreement incorporates a clause which productive machinery or relative buildings during the currency of the agreement, which will remain in force until three months notice prices and finance, the exports of gunny which remain to alter the present working arran- volume of exports. There were also an increase in the value accompanied by a decrease in the volume of exports was due to the very september, October, November and December of the total complement of the trade, have still lower.

Since the 1st November 1934 this exported The number of bags shipped intention to the extent that considered while the number of bags shipped intention to their looms sealed, and bags for transporting grain Exports to Australia. the mills have worked with only 121 per cent of the total complement of their looms per cent of as from 1st May 1935 only 10 per cent will bags for transporting grain Exports to August 1935 and to this working house, however, have as has been stated above applies only, to the mills in the membership of the Association, there came into force with effect from 1st Agust 1932 an agreement with the five printing and Agarman Agarman Gagalliha, Lindlew and There were 74 mills at work throughout the Massociation, namely There were no difficulties as regards the supply August 1932 an agreement with the five principal mills outside the Association, namely Adamsee, Agarpara, Gagalbhai, Ludlow and Shree Hanuman, whereby these mills undertook to restrict their working hours to 54 per week up to 30th June 1933 With Certain modifications this agreement has since been ex-There were no difficulties as regards the supply The number of gunny bags shipped from Calcutta during 1922-21 declined from 386

million bags to 342 million bags, but the value increased from Rs 13,87 lakes to Rs 15,82 million bags, but the value in the ghimments of onne slath ross from Association mills—Premehand, Craig, Waverley, Migna and Nuddea—have also been granted the privilege of working 54 hours per week An Association, styled the Calcutta Jute few years by the Agnosticutal Department of the Government of India with the Decan hemping in Jute for very similar to jute As a result, a new variety of the Diant. Known as Type 3. has been ob Calcutta to promote and to guard the common interests of its members as dealers in jute for and brokers of jute for sale to the members are balers of the plant, known as Type 3, has been of the plant, known as Type 3, has been ob the plant, known as Type 3, has been ob the plant, known as Type 3, has been ob the plant, known as Type 3, has been ob the plant, known as Type 3, has been ob the variety is to be grown on a number of the variety is to be grown on a number of esting was 10 ft to 12 ft long, of an exceptionality in the plant (Houseus cannaumes), which is interest, a new variety and the plant, known as Type 3, has been ob the variety is to be grown on a number of the variety is to be grown on a number of esting was 10 ft to 12 ft long, of an exceptionality in the plant (Houseus cannaumes), which is interest.

Effects of the War.—The official review of the Trade of India in 1916-17 says —The of the Trade of India in 1916-17 says—The value of the exports of raw jute increased in lashs. The quantity exported, however, was less than in the preceding year. The estimated of the crop was 12 per cent. The estimated for the previous year, viz. 1,490,000 tons or and other abnormal circumstances brought parts of India as are not suitable for inte. the Philippine Islands, New Zealand, India, during the first six months of 1914 owing to Bussia, Italy and Germany. The opinion ap large stocks held; but the closure of the Bussian pears to be held that the effect of the war will be hemp market on the outbreak of war resulted to cause very considerable changes in the char-in a marked improvement in Values, and there acter of the fibre market. There will probably was a keen demand and a considerable rise in be labour dificulties, it is thought, in the prepaprice. Exports from Calcutta during 1922-23 ration of the hemp crops of Russia and Hungary and it is not unlikely that the world will look to countries such as India for the supply of fibres which may be used as substitutes for the Euro- 197,412 cwts. to 269,487 cwts. and the value pean varieties of hemp. There can be no doubt from Rs 26 93 lakes to Rs. 86 68 lakes.

Prior to the war, the United Kingdom's re-that one of the early effects of the war was quirements of hemp were mainly supplied by to firm up hemp prices. As far as Indian hemp the following countries in order of importance—is concerned, values were persistently depreciated made a great recovery from the previous year The quantity advanced by 37 per cent from'

## THE WOOL INDUSTRY.

India both by land and by sea Imports by sea come chiefly from Persia, but a certain quantity from Persia also comes by land, while the main imports are from Afghanistan, Central Asia, Tihet and Nepal Quetta, Shikarpur, Amritsar and Multan are the main collecting centres for wool received by land from Afghanistan and Persia, whence it is almost invariably railed to Karachi for subsequent export overseas

Imports and Exports—A considerable amount of wool is imported annually from Tibet, and in normal years, from Afghanistan Imports of raw wool in 1933-34 decreased from 7 2 million lbs valued at Rs 42 lakhs to 5 1 million lbs valued at Rs 34 lakhs Australia with her contribution of 2 8 million lbs valued at Rs 18 lakha still remained the largest supplier, although this quantity was less by 0 2 million lbs as compared with imports from that country in 1932-33

Production in India—The production of wool in India is estimated at 60 million lbs the estimate being arrived at from the available figures of the number of sheep in the country and their estimated yield per fieece, the average quantity of wool yielded per sheep per annum being taken at only 2 lbs.

All Indian wools are classed in the grade of carpet wools, and it is correct to say of perhaps fully half the breeds of sheep found on the plains of India that they yield a kind of hair rather than of wool. They are reared chiefly on account of the mutton, and the fleece has been generally regarded as of subsidiary interest In many respects, in actual fact, the Indian plains sheep approximate more nearly to the accepted type of the goat rather than of the sheep. Short remarks in his manual Indian cattle and sheep, particularly with respect to the Madras type, that they "resemble a greyhound with tucked up belly, having some coarseness of form, the feet light, the limbs bony, sides flat and the tail short"

Mill manufacture —The number of mills in British India in 1930, the latest year for which Calcutts, (1919).

Wool exported from India consists not only details are available, was 12 of which five were of wool grown in India itself, but of imports in the United Provinces. The paid up capital from foreign sources, these latter coming into of these mills was Rs. 68,28,576 and the number India both by land and by sea. Imports by of looms and spindles was 1,447 and 60,203 of these mills was Rs 68,28,576 and the number of looms and spindles was 1,447 and 60,203 respectively. The average number of persons employed daily in these mills was 4,240 are no complete figures of production, the last year for which they are available being 1921 when the quantity of woollen goods produced was 3,820,870 lbs valued at Rs 1,17,09,396 As regards Indian States there are four woollen mills in Mysore which produced woollen goods of 2,700,201 lbs, in weight in 1930, the value being Rs 17,83,256 The bulk of the wool used by the Indian mills is Indian wool, although it is supplemented to some extent by the importation of merinos and cross-breds from Australia for the manufacture of the finer classes of goods Their market for manufactured goods is almost entirely in India itself Imports of woollen piecegoods in 1982-83 increased by over 8 million yards as compared with the preceding year, and even exceeded the imports of 1929-30 by about a milion yards Imports came chiefly from France, Italy, Japan and the United Kingdom There was a considerable the United Kingdom increase in the number of woollen shawls imported in 1932-33, Germany being the largest single source of supply Imports of carpets and floor-rugs declined to 188,000 lbs in 1932-33 from 267,000 The share of Persia in this lbs in 1931-32 rade receded considerably, but imports from the United Kingdom rose.

Blanket weaving and carpet manufacture are carried on in various parts of the country, notably in the Punjab and the United Provinces. Woollen pile carpets are made in many of Amritsur had a considerable trade at the jails one time in weaving shaws from pashm, the fine under fleece of the Tibetan goat, but its place has been taken to some degree by the mathe nufacture of shawls from imported worsted yarns, but more generally by the manufacture of carpets of a fine quality which find a ready sale in the world market. This work is done entirely on hand looms and the carpets fetch a high price,

Bibliography.—Notes on wool in India By H. Silver and J. K. Mehta, Govt, Press,

## Silk.

In the early days of the East India Company the Indian Silk trade prospered greatly, and various sub-troplical races of the Silkworm were introduced. But the trade gradually declined for the following reasons.—

In the seventeenth and eighteenth centuries India's chief competitor in the silk trade was the Levant Company. Successful efforts, however, were made to acclimatise in Europe one or two races of a temperate worm, procured from China and Japan When sericulture became part of the agriculture of France and Italy, a quality of silk was produced entirely different from that of India and Turkey, and its appearance created a new demand and organized new markets.

All subsequent experience seems to have established the belief that the plans of India, or at all events of Bengal, are never likely to produce slik that could compete with this new industry. On the lower hills of Northern India, on the other hand, a fair amount of success has been attained with this (to India) new worm, as, for example, in Dehra Dun and Kashmir. In Manipur, it would appear probable that Bombyz mori, possibly obtained from China, has been reared for centuries The caprice of fashion has, from time to time, powerfully modified the Indian slik trade The special properties of the Lorah slik were formerly much appreciated but the demand for them has now declined. This circumstance, together with defective systems of rearing and of handreeling and weaving, accounts largely for the present depression in the mulberry slik trade of India.

Mulberry-feeding worms.—Sir Watt states that in no other country does the necessity exist so pressingly as in India to treat the subject of silk and the silk industries under two sections, viz , Bombycidas, the domesticated or mulberry-feeding silkworms , and Saturnijdae, the wild or non-mulberry-feeding worms India the mulberry worm (Bombyz Mort) has been systematically reared for many centuries, there being six chief forms of it. In the tem-perate tracts of India various forms of Morus alba, (the mulberry of the European silk-producing countries), are grown specially as food for the silkworm. This is the case in many parts of the plams of Northern India, Baluchistan, Afghanistan, Kashmir, and along the Himalaya at altitudes up to 11,000 feet. The other species even more largely grown for the Indian silkworm is M. Indica of which there are many distinctive varieties or races. is the most common mulberry of Bengal and Assam as also of the Nilgiri hills

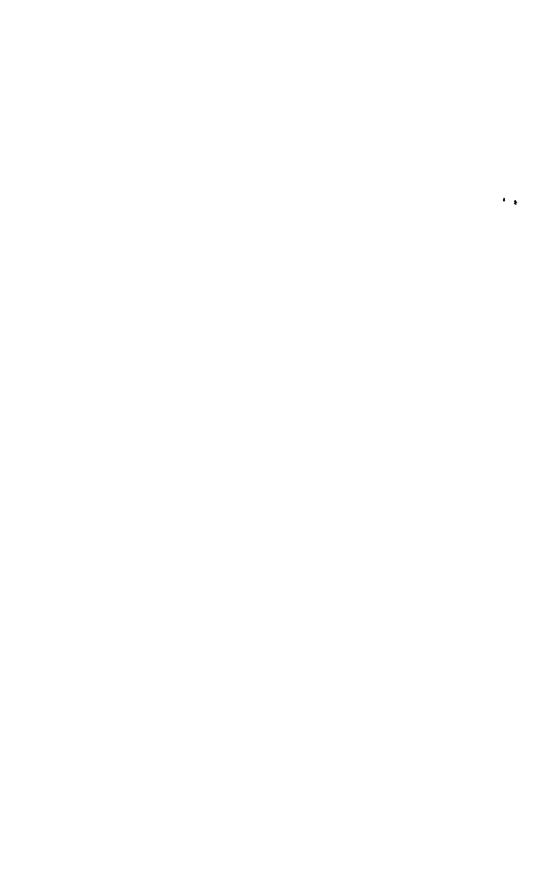

India has three well-known purely indigenous silkworms, the tasar, the muga and the ers. The first is widely distributed on the lower hills, more especially these of the great central tableland, and feeds on several jungle trees. The second is confined to Assam and Eastern Bengal, and feeds on a laurel. The third exists in a state of semi-domestication, being reared on the castor-oil plant. From an art point of view the muga silk is the most interesting and attractive, and the cocoon can be reeled readily. The

eri Silk, on the other hand, is so extremely difficult to reel that it is nearly always carded and spun—an art which was practised in the Khasi Hills of Assam long before it was thought of in Europe.

Experiments and results —Numerous experiments have been made with a view to improving seciculture in India French and other experts are agreed that one of the causes of the decline of the silk industry in India has been the prevalence of diseases and parasites among the worms, the most prevalent disease being pebrine M Lafont, who has conducted experiments in cross breeding, believes that improvement in the crops will be obtained as soon as the fight against pebrine and other diseases of the worms is taken up vigorously by the producers of seed and the rearers of worms, while improvement in the quality of the cocoons will be obtained by rearing various races, pure and cross breeds.

In Kashmir and Mysore satisfactory results have been obtained. In the former State sericulture has been fostered on approved European principles with Italian reeling machinery, seed being imported annually on a large scale. In 1897 in Mysore Mr. Tata, after selecting a plantation and site for rearing houses, sent to Japan for a Superintendent and trained operatives. The Mysore authorities have made a grant of Rs. 3,000 a year to the Tata farm in return for instruction given to the people of Mysore in Japanese methods of growing the mulberry and rearing the insects The products mulberry and rearing the insects of the Mysore State are exported to foreign countries from Madras The work of the Salvation Army is also noteworthy in various parts of India They have furnished experts, encouraged the planting of mulberry trees, and subsidised several silk schools. The draft prospectus has been assued of a silk farm and institute to be started at Simia under the The Lieut auspices of the Salvation Army Governor of the Punjab has permitted the school to be called after his name, and the Government made a grant Ωſ Punjab Sir 2,000 towards the expenses Dorabji Tata has also made a donation of Rs 1,000 The Bengal Silk Committee under the guidance of some French experts have conducted cross-breeding experiments with a view to establish a multi-voltine hybrid of European There is a Government sericultural quality farm at Berhampore, where, it is said, a pure white multi-voltine of silk worm is reared The results of the Bengal Committee's labours may be sammed up as follows the only really effective method of dealing with the problem is to work up gradually to a point at which the whole of the seed cocoon necessary for the province will be supplied to rearers under Government supervision, and to esta-blish gradually a sufficient number of large nurseries throughout the silk districts of the province.

In 1915 there was issued by the Agricultural Research Institute, Pusa, a Bulletin (No 48 of 1915) entitled "First Report on the Experiments carried out at Pusa to improve the Mulberry

The movement has thus developed rapidly and the stages of its evolution may be direfly and the stages of its evolution may be than an enmanned as—agroultural coedit, urban credit, central credit organisation; urban cooperation agricultural cooperation; urban cooperative banking, long-term loans and debt co-operative benking, long-term loans and debt co-operative education, rectification and consolication of the credit movement, and organisation of supervision over primary societies.

The manders in the history of the co-operative type movement in India are, the Co-operative Credit Societies Act of 1904, the Co-operative Societies Act of 1912, the Machen Committee Report, 1915, the establishment of neticities, tion, 1919, the establishment of neticities, tion, 1919, the establishment of neticities, committees of Enquiry into the co-operative movement in several provinces, propagands, the legislation, the Report of the Royal Commission on Aginatical and Provincial Banking Enquiry Commission and Provincial Banking Enquiry Committees, 1931

It may also be mentioned that the Indian States were not slow in introducing the co-operative movement within their limits, and the novement in some of the more important of the States, such as Hyderabad (Deccan), Mysore, States, more or less on the same innes as those followed in the neighbouring British indian Provinces

achieved or the deficiencies revealed drawing attention of other areas to the success e perments and efforts in particular areas and a clearing house for authentic information a stimulate progress through a careful stimula idea of a central organisation, which would be yet, there seems to be nothing wrong in the 1914, the provinces do not much fancy the imposition of control from the centre and Co-operation under the Montford Beforms of opposition, since after the provincialisation of to motanibro-os resols a usods gard of between the above of most and seems of motal man and seems and seems and the seems of the seems Imperial Government with a small catabilahment but also the capital and suggested the oreation of a Central Co-operative Board under the ing not only the interest on their debentures mortgage banks by the Government guaranteena more provinces than one it also recommend-an more provinces than one it also recommend of an earnest- efforts for the development of land tive Societies working in the whole of India or Act so as to permit the registration of Co-operaactment of an All-India Co-operative Societies kion Thus Conference recommended the enalso included some ministers in charge of Agri-culture and Co-operation from the provinces and a representative of each of the two All-India and a representative of each of the two All-India and a representative of each of the two All-India and a representative of each of the provinces tiom the various provinces and States, but it Conference at New Delhi on the 29th January 1934 This Conference was unique in so iar as it was not restricted only to the Registrars as it was not restricted only to the Registrars of Co-operative Someties and their advisors The growing deficulties of the Co-operative of the Go-operative of unprecedented depression led the Government of India to hold an All-India Co-operative

the growth or overdue loans of land mortgage panking and efforts to meet lead to a tightening up of supervision, an extension little doubt that their recommendations would of extension of land mortgage banking on a Co-opolative basis. These Committees have not yet submitted their reports, but there is depression, and the third to examine the problem ebend has esorig gailled to esonit erade to report on the bestrayto help the agriculturate buper using Unions in the Presidency, another entrery isson over Co operative societies by the were appointed, one to examine the system of non-official Co operators to discuss the problems that contronted the Movement in Bombay As a result of this Conference, three Committees 1933 a Round Table Conference of official and The Government of Bombay convened in June mittee which has published its report last year recently got its movement examined by a comemphasised by the Royal Commission on Agricul-ture is still to be met Bihar and Orissa the population and the development of banking firefices have been examined, while the need for soparate enquires into the whole movement in the different provinces of the innes of those in the different provinces of the half seasoft in the firefice of the firefice in D P O P and blacks and the firefice of the firefic have an intumate bearing on the credit needs of aspects of the co operative movement which committees, for obvious ressons, confined their inquiries to danking in relation to agriculture, panall industries and trade. Thus only those angulty Recently, in consequence of the appointment of the provincial committees under the Indian Central Banking Enquiry Committee the co-operative movement in the different provinces has been surveyed. But the provincial provincial committees the commentative movements are considered to the contract of the provincial comments of the provincial comments of the contract of the co was appointed and co-operation formed only a part—though an important one—of its extensive In 1926, the Royal Commission on Agriculture

The non credit movement has had naturally more obstacles to overcome than the credit but the former is alowly gathering force in the slape the former is alowly gathering force in the slape of sale societies for cotton in Karnatal, Gujarat and Khandesh, cattle mentance societies in bengal and the Southern Division of the Bombay Presidency Perhaps the most remarkable instances of the parties in Division of the Bombay Presidency of the first seen movement in India is to be found in the Fungab where consolidation of holdings to operation. In the non-giftential in hon-credit operation. In the non-giftential mon-credit operation. In the non-giftential in hon-credit There are a number of housing societies and artists and Alysore, and artistally societies and unadilied abour societies in Macras societies and unadilied abour societies in Macras it may be noted that on the surface in its may be noted that and the surface in the non-oredit and continued in the non-oredit and the specific on the non-oredit and the special processing on the non-oredit and the progress and in the non-oredit and the progress and the same is made the progress.

movement in rorms other than credit has not been very remarkable and credit societies superchalf the Agricultural Credit bocseties

even audit tive education, supervision over societies and ingly important, some adding to the primary function of propagands, others such as co-operabodies began to play henceforth became increas-The part these non-official primary societies an some cases as unitary sociates reaching down in the construction of the village through their other cases as a season of the district, in other cases as a set cases of the district, in other cases of the second of the of the cases complete of the second of the seco The steady growth of the Central Financing Agencies relieved the Registrars partity of the need for attending to this very important matter in the development of co-operation, but properand his staff, paid or honorary, and it was and his staff, paid or honorary, and it was perceived that non-official institutions should be established to take over this function from official hands accordingly Co-operative official hands accordingly Co-operative linstitutes were started in various provinces, in some cases as unitary societies reaching down in some cases as unitary societies reaching down in some cases as unitary societies reaching down in some cases as unitary societies reaching down in some cases as unitary societies reaching down in some cases as unitary societies reaching down in some cases as unitary societies reaching down in some cases as unitary societies reaching down in some cases as unitary societies reaching down in some cases as unitary societies reaching down in some cases as unitary societies reaching down in some cases as unitary societies reaching down in some cases as unitary societies reaching down in some cases as unitary societies reaching down

The steady progress of the movement—some-times even too rapid—for nearly 20 years, however, was found hardly to lessen the colossal burden of the indebtedness of the ryot, for co-operative orients necessarily confined itself to appear the result of the result of the parties that

the first Co-operative Land Morigage Bank nas started at Jhang in 1920 provinces also rolloned suit short-term loans It was in the Punjab that

The fall in tea prices greatly affected the profits of tea companies The following table which shows the profit per aere of 65 tea companies given an idea of the effect on profits of the fall. In prices '-

Profit per Acre of 65 Indian Ten Companies.

		(		1
	1913	1021	1924	1929.
Average profit per mature acre	2 6-10-7	£ 15-2-0	£ 10-0-0	· £ 6-9-0
Average profit in pence per lb.	2,6	u. i	; 556	2.26
Average crop per mature acre	599 lbs	560 th4,	625 lb1	631167
}		<u> </u>	<u> </u>	

It is quite clear from the above table that, should be set up to present from movement of although the yield per acre has considerably labour from one part of India to another, increased, the profits per acre are actually lower. than in 1913.

The main reasons of the slump in the tealits place. industry are over-production and intense competition, particularly from Java and Sumatra in order to counteract the adverse influence of was reached early in 1930 by associations of tering from the degree of a Protector of India should appoint growers. For India and Geylon the degree of a Protector of Immigrants in Assam to look after restriction to be undertaken varied according the interests of emigrants from other Provinces to the quality of the tea produced, being greater who have not yet settled in Assam. the former, an agreement to restrict output, was reached early in 1930 by associations of terfor the lower qualities than for the finer.

According to the latest agreement between the first three years to be repatriated at the Indian, Coylon and Netherlands East Indias employers expense, produces, for five years from 1933 onwards exports are to be restricted and extension of

During the year 1932-33 there was a considerable fall in the wages of workers on tea plantations. The average wages of men, women and children in the Assam Valley were Rs 10-10 4, 7-14-6 and 5-11-6, respectively, as compared with Rs 12-8-5, 9-8-7 and 0-15-8, , respectively, in 1931-32.

Under the Ottawa agreement Indian Tea has been granted preference by Great Britain

The following are the important recommendations made by the Royal Commission on Indian Labour in regard to the Tea Industry. The recommendations contained therein are very vital to the inture welfare of the industry. and the principal amongst them have therefore been reproduced below -

- No further legislation making a breach of contract of service a criminal offence should be countenanced.

- (3) The Assem Labour and Emigration Act should be repeated and a new measure set up in
- (4) Th aboli-hed The Assam Labour Board should be
- - Every future as-lated emigrant to an Assum ter parden should have right after the
- A norter dismissed before the expiry of cultivation not to be permitted beyond a per the three years should be entitled to repatria-cent of the present planted area tion at the expense of the employer dismissing him, unless it is established that the dismissal was due to wilful misconduct
  - The establishment of statutory wagefixing machinery, if practicable, is desirable, and there are reasons for believing that, if proper methods are adopted, a practicable scheme can be devised
  - (9) Before egislation is undertaken, one enquiry should be undertaken as to the most suitable form of machinery, the actual rates paid and the variation in these rates between district and destrict and gentless and marden district and district and garden and garden
  - Maternity benefits should be provided therein are for by legislation.
    - (11) The employment, either directly or with their parents, of children before the age of 10 years should be prohibited by law.
    - Boards of Health and Welfare should be established under statute for convenient planting areas

(2) The power conferred by section 3 of the Assam Labour and Emigration Act to prohibit implemented by the Tea Districts Emigration recruitment in Assam in particular localities Labour Act (XXII of 1932) which came into should be withdrawn immediately and no barrier force on 1st October 1933.

### Coffee.

Such historical evidence as as available on the subject shows that coffee was first introduced into India from Mecca as early as the 16th The first coffee garden was planted century by a European about 1840 but the industry thus started did not flourish till 1860

The production of coffee in India is mostly confined to the South The area under coffee in 1932-33 (including plantations of less than 10 acres) was 1,77,000 acres, an increase of 19 per cent over the figures for 1925 26

The total exports of coffee increased from 1,50,000 cwts in 1926-27 to 2,77,000 cwts, in In 1928-29 and 1929-30 the shipments declined and amounted to 1,98,000 cwts and 1,84,000 cwts respectively, but exports quantities but it also imports it chiefly from again rose in 1930-31 and amounted to 2,98,000 cwts. In 1981-32 the shipments declined to 156,000 cwts. but in 1932-33 exports again

rose and amounted to 1,73,000 cwts principal destinations of Indian coffee are the United Kingdom and France Shipments to the United Kingdom rose from 44,000 cwts in 1931-32 to 52,000 cwts in 1932 33 and those to France from 43,000 cwts to 54,000 gwts while there was a slight increase of 900 cats in the exports to Norway Other European countries, namely, Germany and Italy reduced their demands from 16,000 and 6,000 cwts to 12,000 and 5,000 cwts, respectively. Shipments to Iraq and Australia (including New Zerland), showed an increase, while there was a decrease in the shipments to Bahrein Islands.

The following table gives the figures of the production and exports of Indian coffee -Production and Export of Indian Coffee in thousands owis.

			1		

Making allowance for the re-exports from India of imported coffee, the consumption of Coffee in India in 1933 was approaching six times the amount consumed in 1925

The total production of cured coffee in India during the season 1982-38 was nearly 821 million ibs as compared with 34 million ibs during the previous season. Exports declined from 293,000 owts in 1930-31 to 156,000 owts in 1981-82 The pre-war and post-war averages were 255,000 cwts 216,000 cwts 226,000 cwts resiectively Local consumption of Indian coffee which has been expanding expanded still further owing to the restrictions on imported coffee As regards exports, the United Kingdom and France which constitute the principal and France which constitute the principal markets, both increased their respective off-takes very considerably and required 52,000 cwts and 54,000 cwts as against 44,000 cwts and 48,000 cwts respectively in 1931-32 The total value of the exports of coffee was 1,10 lakhs in 1932-33

at 1,01,174 of whom 64,336 were permanently employed (namely, garden labour 48 126 and outside labour 21,210) and 36,838 temporarily employed (outside labour), as compared with 96,706 persons (89,157 garden and 17,153 outside labour permanently employed and 40,390 temporary outside labour) in 1931-32

The general trade depression did not fail to affect the coffee industry but in addition to the general slump in trade there was an additional factor which depressed coffee prices and this was the exceptionally heavy crops of Bruzilian coffee Since the year 1925 there has been a general downward trend in coffee prices. Until the end of 1929 the fall was comparatively slow, but since then it has been very rapid This will be clearly seen from the fact that while the average wholesale price of Indian coffee in London was 140s in 1923 and 127s in 1929 it fell to 86s. in 1930.

of the exports of coffee was 1,10 lakhs in 1932-83 as, against Rs 94 lakhs in 1931-32.

The declared value per cwt of coffee was as, against Rs 65.8-1 Rs 60-11-9 in 1931-32 as against Rs 65.8-1 lin 1930-31. It rose to Rs, 63-6-7 in 1932-32 the wholesale price in India per cwt in April in the plantations during 1932-33 was returned 1933 was Rs, 72-0-0

From the forecast above, prepared by Mr R C, areas like the U F and Bihar, the sugar belt Srivastava, Sugar Technologist, Imperial Council of India, has yet to be tackled by the industry of Agricultural Research, India, it appears that home production in 1936-37 should outstrip consumption unless internal demand materially of Indian sugar-unil owners was held at Calculta expands. During the three years ended 1933-84, to discuss the question of a intracting organizabugar consumption in India has appreciably gone tion. In order to eliminate as fir as possible flown by about 19 per cent per year Stimula-limports of foleign sugar the problem of disposing ing consumption 19, therefore, one of the of the surplus production of the sugar belt at pressing problems facing the industry at present various port towns at competitive prices was Another problem before the industry is the need discussed. The proposit to form a central for a thorough overhauling of the existing machinery of distribution. Some believe that the and though tentative agreements were arrived problem is not so much of over-production as of at regarding certain problems immediately an equitable distribution between the vallous facing the industry, the proposed board was not at the country. prits of the country

During the latter part of 1934, a conference Excess production in set up by the end of the year 1934

#### INDIAN TOBACCO.

The tobacco plant was introduced into India crop, but the latter gives better quality. There by the Portuguese about the year 1605. As is always a great demand on the market for in other parts of the world, it passed through both the Havana and the Burma tobacco a period of persecution, but its ultimate distri-. The smooth leaves of the Havana plant are used bution over India is one of the numerous ex-; for the wrappers and the coarser Burmese leaf amples of the avidity with which advantageous for the filling new crops or appliances are adopted by the Indian agriculturist. Five or six species of India are—(i) the Coimbatore and Dindigal Nicotiana are cultivated, but only two are found in India, namely, N Tabacum and N. rustica. The former is a native of South or Central America, and is the common tobacco (a) the Godavari Delta of Madras; (ii) the of India About the year 1829 experiments were conducted by the East India Company towards improving the quality of leaf and perfecting the native methods of curing and manufactured for harvasting varies in different new crops or appliances are adopted by the facturing tobacco. These were often repeated, and gradually the industry became identified with three great centres namely, (1) Eastern with three great centres namely, (1) klastern and Northern Bengal (more especially the District of Rangpur), (2) Madras, Trichinopoly, Dindigul, Coconada and Cahcut in Southern India, and (3) Rangoon and Moulemen in Burma Bengal is the chief tobacco growing Province, but little or no tobacco is manufactured there. The chief factories are near Dindigul in the Madras Presidency, though, owing to the imposition of heavy import duties on the foreign leaf used as a

of the Botanical section of the Agricultural Research Institute, Pusa, and three Alemons tured tobacco rose from 21,000,000 in to navo been published recording the results of 29,000,000 lbs in quantity and from Rs 7 investigations in that direction The immediate problem at Pusa is the production of a good eigerste tobacco. Many attempts have been made in the past to introduce into India 18,000,000 lbs. as compared with 9,000,000 lbs. the best varieties of eigerste tobacco from America, but the results have been disappointing. It is now hoped to build up by hybridization new kinds of tobacco suited to Indian conditions of growth, which possess in addition 18 for million lbs and the Netherlands of the conditions of growth, which possess in addition 18 for million lbs and the Netherlands in the conditions of growth, which possess in addition 18 for million lbs and the Netherlands in the conditions of growth, which possess in addition 18 for million lbs and the Netherlands in the conditions of growth, which possess in addition 18 for million lbs and the Netherlands in the conditions of growth, which possess in addition 18 for million lbs and the Netherlands in the conditions of growth, which possess in addition 18 for million lbs and the Netherlands in the conditions of growth, which possess in addition 18 for million lbs and the Netherlands in the conditions of growth, which possess in addition 18 for million lbs and the Netherlands in the condition the conditions of growth, which possess in addition 18 for million lbs and the Netherlands in the condition to the condition of the c

Area under Cultivation—The cultivation amounting to 1.2 million his shown in interest of tobacco is very widespread in Burma. The of 0.4 million his or of 50 per cent There two main varieties are called "Burmes tobacco" of the large-leaved tobacco" of the lederated Maly States and Honglen-Burmese tobacco there are two main varieties Except for Honglong, China practically with "Seywet-gyi," the large-leaved variety and drew from the market, her official minimals "Seywet-gyin," a smaller-leaved variety with to only 2,000 lbs as against 72,000 lt. 17 pointed leaves. The former yields a heaver 1932-33 and 2,16,000 lbs in 1931-32

The season for harvesting varies in different localities ranging from December to June, but the bulk of the crop is harvested during the months of February, March and April leaves when quite dry, are assorted and placed in heaps in stacks to ferment. They are then tied into bundles of 25 or 30, a useless leaf being employed for tying each bundle. The leaves are laid perfectly flat, the bundles being fan-shaped In this condition they are baled, the broom-like ends projecting outwards By varying the degree of fermentation of the leaves different qualities of tobacco are obtained black variety is used in India for cake tobacco, cigar wrapper, some cigar factories have been moved to the French territory of Pondicherry.

## The Opium Trade.

Mention opum and half the Western world to the legitimate demands of the non China directs its thought to India, as though India markets A figure was elaborately calculated were a most unscruppilous producer of the most for these markets and India drastically out her nexious drug on earth Refer to the League of Nations' proceedings in regard to opium and again, mainly under the leadership of American representatives, one finds India and the Government of India held up to humanity as traffickers in oplum and as thereby obstacles to making the world a better place to live in In fact, neither India nor the Government of India has anything to be ashamed of in its opium history. Whatever may be the case in other countries, centuries of inherited experience have taught the people of India discretion in the use of the drug and its misuse is a negligible feature in Indian life Abuse of its properties is rarer in India than the abuse of alcohol in Western So much for the internal position countries

The record as regards exports is equally record as regards exputes an India has never driven hard bargains to Where secure the sale of the product overseas it has been bought the reason is its superiority over other supplies, because of the stringent regulations by which its manufacture has always. under the British authorities, been regulated in India, in order to secure the purity and cleanliness of the finished product Directly any importing country has expressed a desire to have the trade reduced, the Government of India have responded by stiffening their restric-There have, in recent years, tions on export mainly at the instance of America, been numerous International conferences with a view to making onum and drugs derived from it more difficult to obtain and in every case it has been found that India had already given the lead in the special regulations which it was proposed to lav down

The China Trade —The classic case of Indian restriction of her export opium trade is provided by China There is a long history of Indo-Chinese negotiations on the subject, but it is unnecessary to go further back into these than 1911 On 8th May of that year, there was drawn up between India and China an agreement under which the Government of India assented to (1) the payment of an import duty three times the existing amount in return for the promised abolition of provincial taxes, (2) the partial closure of China to Indian opium by provinces, including not only stoppage of transit passes, but also treaty port closure, Shanghai and Canton excepted, (8) the total extinction of trade before 1917 on proof of total cessation of opium production in China, and (4) revision of the agreement on due notice by either party This agreement, as its terms indicate, was on the side of China the outcome of a professed desire to stamp out the opium trade and opium consumption in her midst. And on her side China, in the agreement, undertook, among other things, to reduce production in China part passu with the reduction of exports from

In addition to the limit to the China trade imposed by the agreement, the Government of India undertook in order to lessen the danger of smuggling into China, and as an earnest of their desire to assist that country, strictly to confine the remainder of Indian opium export the terms of this document presented no new

for these markets and India drastically cut her non-China exports down to it in 1911 subsequent years, she progressively reduced the permissible export limit and in 1913 she stopped

exports to China altogether

The financial sacrifice thereby undertaken by India in order to help the Chinese in their professed desire for reform amounted to many millions sterling a year. China never carried out her side of the bargain She is still demonstrably the greatest opium producing country in the world and the only effect of the reduction. and eventual abolition, of imports from India is better trade for Chinese opium producers and merchants and largely moreased imports of opum into China from Persia and Turkey

Agreements observed by India —The Government of India have carried out to the letter their side of the 1911 agreement have gone further. Not only were exports to China stopped and exports to non-China countries in the East limited in accordance with the agreement with China, but exports to non-China countries have, on the voluntary initia-tive of India, been subjected to successive agreements with the countries The Government of India introrestraining concerned duced, with effect from 1st January 1923, a certificate system recommended by the League of Nations, whereby all exports of opium must be covered by certificates from the Government of the importing country that its consignment is approved and is required for legitimate purposes. The pressure exerted by the League of Nations in this regard was not pressure upon the Government of India but upon the Governments of the importing countries and, so far as India was concerned, the new system was welcomed because it removed from the shoulders of the Government of India all responsibility in regard to oppum consumption in the im-porting countries and laid it upon their own respective Governments In 1926, in order to fulfil the spirit of her international agreements, India decided, though she was in no way bound by their letter to do so, to reduce her exports to Far Eastern countries for other than medical and scientific purposes by 10 per cent yearly, so as to extinguish them altogether by December 1935, and effect has been given to that policy at considerable financial sacrifice India is the only country that has made any considerable sacrifices of the kind

International Aspect of the Problem It was only during the processes and negotia-tions by which the Indian oplum export trade to China was being suppressed that the Opmin question began to assume a widel" international This happened on the initiative of the USA, at whose instance an International Opum Commission met at Shanghal in 1909 and formulated a series of recommendations for the suppression of opium smoking and the regulation of the use of opium and morphia. The United States thereafter advanced a further proposal for an International Conference at the Hague This met on 1st December 1911. the Hague This met on 1st Dicember 1911, and finally drew up a convention on the subject, and finally drew up a convention on the subject.

ideas to the Government of India. Their provisions India had long observed. As regards morphia and cocaine, with which the Hague Conference concerned itself, the uses of these drugs in India had long been subject to exceedingly strict regulations. But there two drugs, the use of which for other than medical purposes invariably takes the form of dangerous vice, were becoming a menace to the world. They were not included within the scope of the proposals submitted by the USA for the consideration of the Conference. It was mainly owing to pressure by the Government of India that they were included within the terms finally signed and the rigid and universal application of the articles of the Convention which apply to them would rid the world of the drug evil

As regards prepared opnum, that is to say smoking opium, India does not and never has exported it and the sale of it in India is prohibited. No opium is exported from India to the United States of America. None has been exported to Great Britain by private merchants since 1916. Exports to Great Britain are strictly limited to medicinal requirements and go officially from the Government of India to the British Government. Nor is Indian opium exported.

to any other country in Europe

Indian Uses of Opium -There is a fundamental difference between the problem in India and that in foreign countries, particularly in America and Europe America and Europe are principally concerned with the problem of the victors consumption of cocaine and morplus and it is on the experience of the abuse of these drugs in those countries that much of the condemnation of Indian policy is based. It is accepted that the consumption of opium in America and Europe is in effect hardly "less disastrous than that of morphia and cocaine And the reason is that to Americans and Europeans opinm is an unacquatomed drug habit of its use being both new and strange to them, it is never used to moderation but always abused, and the results have no relation to the result of moderate opium eating in India The fact appears to be that peoples acquire a tolerance to drugs to the use of which they are long habituated Opum has been used in India since the 16th century at least. The method, of use is eating and in India, generally speaking, cating seems to do little, if any, harm Smoking, which is the habit of the Far Eastern races, Smoking, rather than of the Indian races, seems to do much more harm in India than eating, while on the other hand where smoking is in ordinary use competent authorities (e.g., the Royal Commission on opum in Malaya) think eating to be

more harmful than smoking
The Government of India have fully participated in the different International Conferences on the drug question and responded to the obligations which her assent to their conclusions has placed upon her in regard to home consumption. But the principal effect upon India of these International discussions has been to draw the fresh attention of her Government and people to the opium situation in her midst, to cause consultations on the subject between the Government of India and the Indian Legislature and to produce what may be described as considerable intelligent progress in the development of those regulations upon the use of opium which are time-honoured.

The Commission of 1893—Despite all thi, the principles of Indian Internal opium policy essentially remain, subject to certain changes of scientific opinion in regard to medicinal uses, those laid down by a Royal Commission which was appointed by His Majesty's Government, mainly as a result of the activities of the Society for the Suppression of the Opium Trade, in 1893, to inquire into all the circumstances connected with the production and sale of Indian opium. The Society which was largely instrumental in bringing about the institution of the inquiry, recorded its opinion that the appointment of the Commission constituted "the greatest and most solid forward step that the movement for the suppression of the opium trade has yet made" and considered that the Royal Commission was "as fair-minded and impartial a tribunal as the Society could have desired to hear its case." The results of the enquiry were published in 1805 in seven yourness.

The Royal Commissioners examined with the greatest care the problem of opium consumption in India and in brief they found that it was not only subject to careful regulation but was governed by longstanding and admirable disciplinary habits among the people Excessive use, they found, was exceptional, and condemned by public opinion. As regards the legal restriction of its use to medical needs, they advised that Government could do no more than limit the extent of cultivation and hold a monopoly of manufacture and wholesale supply and that to draw a line in popular opinion between medical uses and those not strictly so describble would be impracticable. They agreed that the mass of Indian opinion was opposed to prohibition as an unnecessary restriction on individual liberty and interference with established customs and habits. Apart from the religious question they found Indiana generally to consider the use of alcohol to be more objectionable, more injurious and more disgraceful.

The Government of Lord Hardinge, in a Despatch to His Majesty's Government in 1911, and that of Lord Reading, in a despatch dated 24th March, 1921, both in the same words took their stand on the conclusion of the Royal Commission "that the opium habit as a vice scarcely exists in India, that opium is extensively used for non-medical and quasi-medical purposes, in some cases with benefit and for the most part without injurious consequences, that the non-medical uses are so interwoven with the medical uses that it would not be practicable to draw a distinction between them in the distribution and sale of the drug and that it is not necessary that the growth of the poppy and the manufacture and sale of opium in British India should be prohibited except for medical purposes." The despatch of Lord Hardinge's Government a few years ago. It has long been recognised that any attempt to eradicate by law the use of opium would be open to all the objections involved in bureaucratic interference with popular custom. Eating it is largely quasi-medical, at is used for the prevention, cure and alleviation of disease, as a prophylactic as an anodyne, and as the commonest and most treasured house lold medicine of the people, to whom qualified. Calcal ussistance is inaccessable.

restorative to lessen or avert fatigue and in other | tent of Indian opium, which is about 9 per cent elatively innocuous

Present Policy -The current attitude and policy of the Government of India were lately explained in their behalf to the League of Nations Geneva. Their representative declared that any genuine measure of reform initiated by a Proxincial Minister in connection with it would receive encouragement and support from the Central Government and showed that the policy of that Government is, and has been, one of non-interference with the moderate use of raw oprum, whether the object of the consumer be some real or supposed physical benefit or merely the indulgence of the almost universal desire of human beinge, particularly those whose occupations involve exposure or severe bodily exertion, for a stimulant or narcotic Excessive indulgence it is and always has been the desire of Government to express

Oplum is under the current Indian constitu-tion a Provincial Transferred Subject Never-Never-Government of India called an official All-India Conference, which was opened at Simla by Lord Irwin, on 5th May 1930, to consider the question of certain areas where opium consumption was alleged to be unduly high This followed on the prosecution of special provincial inquiries by committees set up by the Local Governments at the special instance of His Majosty's Government The Conference, after an exhaustive discussion of the phenomena presented by the various areas selected for investigation, and in the light of the personal knowledge of the representatives of the different Provinces and of the reports of the local committees, concluded that it appeared that certain parts of Assam and Calcutta might correctly be regarded as having excessive consumption and that Orissa and the Ferozepore District of the Punjab might be held to provide cases for further inquiry In other cases the Conference considered that there was no evidence of prevalent excess But they gave a series of examples to show that there were simple explanatious showing harmless causes for what appear-

ed to be excessive consumption in many places
While speaking at the Second Geneva Opium
Conference on 19th January 1925, Lord Cecil
stated that he had seen figures, apparently
aken from a report made by the United States Freasury, to the effect that consumption was greater in America than in India The estimate ramed by the Advisory Committee of the League of the annual requirements of opium or strictly medicinal and scientific purposes is 300 milligrammes or 9 25 grams per capital which is roughly equivalent to 6 Indian seem per 10,000 The Health Committee of the League opined that this could be reduced to 150 miligrammes, or 6 94 grams in countries possessing a well developed medical service The consumption per capita in British India luring 1924-25 worked out at 17 2 grains er head. The rate of consumption has ceramly fallen since the compilation of this published figure The amount includes veterilary uses and these are extensive, though to ecure statistics of the quantity of opium even to animals is impossible Allowance Allowance ilso has to be made for the poor morphine con- | chistan, Ajmer-Merwara and Delhi.

ways in which, when moderately used, it is at 90 deg consistence, and the limited number of medical practitioners trained on Western lines to administer strictly measured doses Cecil's statement at the League of Nations was received with extreme criticism by Mr Porter of the American delegation Mr Porter said the American statistics cited had been disavowed and that Lord Cecil's observations were a "vile slander upon the people of the United States" Lord Cecil apologised and withdrew his statement But Mr Frederick Wallis, Commissioner of Correction, New York, writing in the Current History Magazine for February, 1925, showed the annual per capita consumption in Italy to be one grain, in Germany 2 grains, in England 8 grains, in France 4 grams and in the United States 36 grains In "Current History" for March, 1925, Mr Wallis defended this last figure and said that in iview of the smuggling into the United States "it would appear to me that the consumption would be much larger than the Government officially gave as 36 grains" It appears now to be recognised by all sane theless, owing to the jealous watching and It appears now to be recognised by all sane criticism by observers in every continent, the opinion throughout the world that India has the cleanest sheet if any m regard to opuum control and export Even the former ill informed sentimental attacks upon the Government in these respects have almost stopped.

> Optum policy has on several occasions during the past few years come under discussion in the Central Indian Legislature and in regard to it the Government of India and the non-official members of the Legislature have been Cultivation of the poppy in British in accord India is confined, except for a few wild and maccessible regions, to the area that supplies the Government of India Factory at Ghazpurin the United Provinces where it can only be cultivated under license Importation into British from the Indian States is controlled by prohibition of imports except on Government account and by agreement with the States concerned that they will not allow exports to British India except by arrangement. Cultivation in British India is progressively and rapidly being reduced The sown area in British India which produced the crop of 1931-32 was 37,012 acres, ie, 26 3 per cent of the area in 1922-23, and 20 per cent of that in 1912-13 The process of reduction was stayed in 1931-1932 because it was found that the rate before 1931 had been too rapid so that stocks were brought to a dangerously low level Progressive and rapid reduction was resumed in 1933 The consumption of opium in the different provinces

But beyond these there are certain real and special causes that contributed to the failure of some of these and hinder the progress of the rest. Chief among them are (1) The Industry is in its infant stage and hence such failures are but incidental. (2) No expert guidance in this line, there is a lack of men and good literature

(3) Paucity of skilled labour of higher type The present Indian workmen in this line and blowers are few in number and illiterate They, therefore, master the situation and are (4) Heavy unamendable to management good fuel, the works usually being cost of situated where good sand and quartz can be and consequently, in most cases, at stance from the coal-fields. (5) To a great distance from the a certain extent, competition from Japan and European countries.

The Indian Industrial Commission say in their Report (Appendix E), viz " The Glass Industry, even in its simplest form is highly technical and can be efficiently carried on only by scientifically trained managers and expert work-men. The present stage has been reached by importing men, only partially equipped with the necessary qualifications, from Europe and Japan, and by sending Indian students abroad to pick up what knowledge they can. The glass industry is a closed trade and its secrets are carefully guarded, so that the latter method has not proved conspicuously successful "

Bibliography—Indian Industries Commission Report (Appendix), Indian Munitions Board, Industrial Handbook, etc. "Notes on Glass Manufacture" By C. S Fox. (Bulletin No 29 of Indian Industries and Labour, 1922)

### HIDES. SKINS AND LEATHER.

India's local manufactures of skins and jeather have steadily increased in recent years Previous to the outbreak of war, the trade in ray hides in this country was good; there was a large demand for hides, and prices ruled high On the declaration of war, the trade which had up till then been brisk was seriously dislocated. Exports to enemy countries, especially to the great emporium of Indian hides, Hamburg, were stopped, and exporters had to find new markets for the raw material. The raw hide business of India had up to that time been largely, if not quite entirely, in the hands of German firms or firms of German origin and Germany had the largest share of India's raw hides. In the four months before the outbreak of war she took 39 per cent, of the total exports In 1912-13 she took 32 per cent and in 1918-14, 35 per cent Germany still takes the major share of India's raw hides while America takes the bulk of goat skin exports. Shipments of tanned hides go mostly to Great Britain

The exports of hides and skins, tanned or dressed, amounted to 19,700 tons valued at Rs 565 lakhs as compared with 14,500 tons valued at Rs 466 lakhs in 1932-33

Conditions of the Trade—The trade in hides and skins and the craft in leather manufacture are in the hands either of manufacture are in the hands either of Mahomedans or of low caste Hindus, and are on that account participated in by a comparatively small community. The traffic is subject to considerable fructuations concomitant with the vicissitudes of the seasons in famine years for instance the exports of untanned hides rise to an abnormal figure. The traffic is also peculiarly affected by the difficulty of obtaining capital and by the religious objection which assigns it to a position of degradation and neglect it has thus become a monopoly within a restricted community and suffers from the loss of competition and popular interest and favour.

Uses of Indian Hides,—The fifteenth report of the Imperial Economic Committee states that Indian hides, both raw and partially tanned, are largely used for the upper leather of boots, partially tanned skins are used for fancy leather

articles and also for gloves. They are exported mostly to Germany, France and Italy Raw goatskins are used almost entirely in the manufacture of glace kid, of which commodity the United States is the chief producer

The chief markets for Indian raw hides are in Central and Southern Europe, Hamburg being an important distributing centre Directly an important distributing after the war an effort was made to direct More of this trade to the United Kingdom, but it has drifted back to Germany The assortment and grading of raw hides exported from Calcutta before the war, largely the result of the work of German firms established there, had reached a high standard After the war the trade became somewhat disorganised from a variety of causes, among which may be cited fiscal changes, the entry into the trade of new and at first inexperienced firms, the increased cost of arranging for supervision at up-country points. It has, however, been recovering its reputation

Protecting the Industry.—The report of the Industrial Commission pointed out that the principal difficulty at present in the hides and leather industry was the lack of organisa-tion and expert skill. Government action to foster the industry was first taken in September 1919, when a Bill was introduced in the Imperial Legislative Council further to amend the Indian Tariff Act, 1894. The effect of this Bill was officially described as follows: "It is to impose an export duty of 15 per cent. on hides and skins with a rebate of 10 per cent on hides and skins exported to other parts of the Empire, and there tanned Its object is to ensure that our hides and skins shall be converted into fully tanned leather or articles of leather so far as possible in India and failing this in other parts of the Empire, instead of being exported in a raw state for manufacture in foreign countries Sir George Barnes who was in charge of the Bill and described the tanning industry as one of the most promising Indian industries ex-plained that " the present position is that we have in India at the present time some hundreds of tanneries for the tanning of hides, a large number of which have come into existence in order to satisfy military requirements during the war. We have in fact the foundations of a articles, bookbinding and for covering the the war. We have in fact the foundations of a small rollers used in cotton mills for drawing flourishing tanning industry, but there is reason the thread Raw sheepskins are used for similar to fear that it may tend to dwindle and disappear

gave further protection both to the inventor by providing that his application should be kept secret until acceptance, and to the public, by increasing the facilities for opposition at an effective period. At the same time a Controller of Patent: and Designs was established, with profer to dispose of many matters previously referred to the Governor-General in Council, and provision was made for the grant of a sealed "patent" instead of for the mere recognition of an "exclusive privilege." The provisions of the Act follow with the necessary modifications those of the British Inventions and Designs Act of 1907.

New Legislation —Part I (Patents) of the Act of 1911 has been further amended by Act VII of 1930 and includes the following —

If an Application comprises more than one invention the additional inventions may be made the subject matter of additional applications bearing the same date as the original application.

The term of the Patent will be 16 years instead of 14 years

Patent of Addition will be granted on the original patent without the payment of additional renewal fees but the additional patent will expire with the date of the original patent

Fresh provisions are made for the use of an invention by Government

Government will grant licences to the public on application if the Patentee refuses to do so on reasonable terms

Several other facilities are given under the Indian Amended Act of 1930 on the lines of the present British Patent Act.

The period of opposition to the grant of a patent has been extended to 4 months from the date of the notification of the "Acceptance" of the application, instead of 3 months. The provisions contained in the Indian Patents and Designs Rules, as regarded divisional applications in respect of inventions covered by the original application and divided therefrom, have been amplified and embodied in the Act teelf Section 10 has been amended to empower the Controller to decide disputes about proceeding with the applications for patents, that may occur between the applicants and third parties, or between joint applicants among Madras themselves

The time for appeal to the Governor-General in Council has been extended to 3 months, instead of 2 monthsfrom the date of the decision appealed against A new Section 21A has been provided relating to secret patents. A new Section 35A has been provided for giving relief in suits for infringement of patents in respect of valid claim, despite the existence of invalid claims in the specification

The definition has been altered as to the person entered on the Register as the grantee or proprietor of the patent. Section 78A (4) has been amended to enable British India to enter into reciprocal arrangement with the Indian States.

The definition of the term "Design" has been altered, and the time for applying to secure for the registration in India, the priority date of the application in the United Kingdom or other parts of the British Empire, has been extended to 6 months

Printed Specification of applications for patents, which have been accepted (One Rupee per copy), may be seen free of charge, together with other publications of the Patent Office at the following places:—

### Insurance in India.

of the Indian Life Assurance Companies Act of 1912 and the Indian Insurance Companies Act of 1928 is 282 of which 186 companies are constituted in India and 146 companies are constituted outside India Of the 186 Indian companies, 60 are established in the Bombay Presidency, 25 in Bengal, 21 in the Madras Presidency, 14 in the Punjab, 8 in Delin, 2 each in the Central Provinces, Ajmer and Burma and 1 each in Burma and the U P Of the 146 non-Indian companies 71 are constituted in the United Kingdom, 31 in the British Dominions and Colonies, 18 in the Continent of Europe, 12 in the United States of America, 9

Europe, 12 in the Java in Japan and 5 in Java blost of the Indian companies carry on business only They are 103 in number and of the remaining 33 Indian companies, 20 carry on life business along with other insurance business and 13 carry on insu-

rance business other than life

Besides the Indian life offices, there are some pension funds, mostly connected with Government offices, which are exempt from the operation of the Act and the Indian Post Office Insurance Fund is also exempt As regards non-Indian companies, most of them carry on insurance business other than life Out of the total number of 146 non-Indian companies, 122 carry on insurance business other than life, 10 carry on life business only and 14 carry on life business along with other insurance business Of the latter 24 companies, 16 are constituted in the United Kingdom, 6 in the British Dominions and Colonies and 1 each in Germany and Switzerland

The total new life assurance business effected in India during 1931 amounted to 125,000 policies assuring a sum of nearly 263 crores and yielding a premium income of 13 crore, of which the new business done by Indian companies amounted to 97,000 policies assuring a sum of 17 crores and having a premium income of § crore The share of the British companies in respect of new sums assured is 81 crores, of the Dominion and Colonial companies about 6 crores

and of the single German company 1 crore
The average sum assured under the new policies issued by Indian companies is Rs 1.764 and under those issued by non-Indian companies

Rs 3,400 The total life assurance business effected in India and remaining in force at the end of 1931 amounted to 714,000 policies assuring a total

According to the report by Mr N Mukarii sum of 168 crores including reversionary bonus Actuary to the Government of India, contained additions and having a premium income of very in the Indian Insurance Year Book, 1932, the inoarly 8½ crores of this the share of Indian number of companies subject to the provisions companies is represented by 502,000 policies additions and having a premium income of very noarly 81 crores Of this the share of Indian companies is represented by 502,000 policies assuring a sum of 94 crores and having a premium income of 41 crores

Most of the Indian companies now transact life assurance business on the scientific principle but there are still some which carry on business on the dividing plan under which the sum assured is not fixed but depends on the division of a portion of each year's premium income amongst the claims arising in that year Government of India Actuary says in his latest annual report that the main defect of dividing insurance business is that policy-holders in each class are charged the same rate of premium of subscription irrespective of their age on admission ranging even in some cases from 18 to 60 years "Business of this nature is not only unsound but is apt to lend itself to the practice of fraud on the part of policy-holders and agents and later on by the company It has been declared to be the curse of insurance enterprise in India." Before the Act of 1912 was passed there were numerous companies which transacted life assurance business on the dividing plan and most of them came to grief Of such companies which were in existence at the time of the passing of the Act the majority have disappeared and some have stopped issuing policies on the dividing plan. A few new companies have taken up this dividing insurance business and it will not be long before they realise their mistake

Some Indian life offices have extended their operations outside India, mostly in British East Africa and in the Near East The total new sums assured by these offices outside India in 1931 amounted to 66 lakhs yielding a premium income of 4 lakhs and the total sum assured including reversionary bonus additions inforce at the end of 1981 amounted to 4 crores,

having a premiums income of 211 lakhs The total new annuity business effected during 1931 was for the amount of about 1 lakh per annum, which was equally shared by Indian and non-Indian companies The total annuity, business remaining in force at the end of the year was for the amount of 83 lakhs per annum, of

which the amount payable by Indian companies was a little over 1½ lakhs per annum The life assurance business of Indian companies which steadily increased during 11 years up to 1929 received a setback in 1980 owing to the general financial depression following table shows the new business effec-ted since 1921 in each year and the total business remaining in force at the end of the year

<del></del>	Year		New business written during the year	Total business remaining in force at the end of the year

# Customs Tariff.

Board, as accepted or amended by term to a period exceeding 3 years Tariff Agreement a large range of British and Colonial goods received a preferential rate of duty from January 1, 1938 But the tariff has been modified with a view to admitting free or at favourable rates articles, the cheap import of which was considered necessary in the interests of the country. Thus certain raw materials, manures, agricultural implements and dairy appliances are admitted free. Machinery, printing materials, etc , are assessed at 10 per cent. and iron and steel rallway material and ships at 155 per cent

Re-Imports --- Articles of foreign production on which import duty has been once paid, if subsequently exported, are on re-import exempted from duty on the following conditions

The Collector of Customs must be satisfied–

(1) of the identity of the articles;

(2) that no drawback of duty was paid on their export:

(3) that the ownership has not changed between the time of re-export and subsequent re-import;

(4) that they are private personal property re-imported for personal use, not merchandise for sale

(5) that not more than three years have passed since they were re-exported.

Duty is, however, charged on the cost of alterations additions, renovations and repairs, involving the substitution of new parts, done to the articles while abroad, which should be declared by the person re-importing the articles in a form which will be supplied to him at the time of re-importation

To facilitate identification on re-importation an export certificate giving the necessary par-ticulars should be obtained from the Customs articles which should be tendered for examin-

ation.

This concession of free entry on re-importation is not extended for the benefit of Companies or Corporate Bodies.

Drawbacks -- When any goods, capable of being easily identified which have been imported by sea into any Customs port from any foreign port, and upon which duties of Customs have been paid on importation, are re-exported by sea from such Customs port to any foreign port, or as provisions or stores for use on board a ship proceeding to a foreign port, seven-eighths of such duties shall, except as otherwise hereinafter provided, be repaid as drawback

Provided that, in every such case, the goods be identified to the satisfaction of the Customs Collector at such Customs port and that the re-export be made within two years from the date of importation, as shown by the records of the Custom House, or within such extended

General import duties are levied for fiscaliterm as the Chief Customs Authority, or Chief purposes and not for the protection of Indian Customs Officer on sufficient cause being shown industries. Any duties imposed for protective in any case determines, provided further that purposes are on the recommendations of the the Chief Customs Officer shall not extend the

> When any goods, having been charged with Import duty at one Customs port and thence exported to another, are re-exported by sea as aforesaid, drawback shall be allowed on such goods as if they had been so re-exported from the former port:

> Provided that, in every such case, the goods be identified to the satisfaction of the Officerin-Charge of the Custom House at the port of final exportation, and that such final exportation be made within three years from the date on which they were first imported into British

> No drawback shall be allowed unless the claim to receive such drawback be made and established at the time of re-export

> No such payment of drawback shall be made until the vessel carrying the goods has put out to sea, or unless payment be demanded within six months from the date of entry for ship-

> Every person, or his duly authorised agent. claiming drawback on any goods duly exported, shall make and subscribe a declaration that such goods have been actually exported, and have not been re-landed and are not intended to be re-landed at any Customs port, and that such person was at the time of entry outwards and shipment, and continues to be, entitled to drawback thereon.

Merchandise Marks.—Importers into India especially from countries other than the United Kingdom, would do well to make themselves acquainted with the law and regulations relating to merchandise marks In Appendix II will be found the principal provisions of the Department at the time of shipment of the Indian Merchandise Marks Act, 1889, and connected Acts and the notifications issued thereunder The following summary of the regula-tions in force does not claim to be exhaustive For those seeking more complete information a reference is suggested to the Merchandise Marks Manual which is published under the authority of the Government of India and obtamable of all agents for the sale of Indian Government publications.

> Infringements or offences may be classified conveniently under four heads --

- Counterfeit trade marks: 1
- Trade descriptions that are false in respect of the country of origin;
- Trade descriptions that are false in other respects; and
- Lengths not properly stamped on piecegoods,

# Finance.

The gradual evolution of the present financial organisation of India is in many respects a reflection of her constitutional development Those who take a broad view of the history of roideral States—and by wintover name it may be called India must in its political structure be a Federal State—nothing is more impressive than the cbb and flow in what may be called the adjustment of Federal and State There is a constant mutation in the powers of the central government and the federal components, though in India we use the terms "Government of India" and "Pro-vincial Governments" to describe them. In the earliest days of British rule, the Provinces, and especially the older Presidencies, were for all practical purposes independent of the central government and responsible only to the authority sitting in London of the nineteenth century the process was such as Bombay and Bengal. The standard reversed, and the Government of India was allpowerful, controlling the Provinces down to above those of the agricultural provinces. This of the himself of the Government of India was an powerful, controlling the Provinces down to the smallest items of their expenditure. This contralisation reached its highest point during the long Viceroyalty of Lord Cur/on, who was this costlier administration pours all its taxable so jealous of his supreme authority that he product into the coffers of the Government of the deprive the Presidency Governors and Rules made to give Bombay and Bengal and the Income Tax receipts have been sought to deprive the Presidency Governors India Rules made to give Bombay and Bengal of their right to correspond direct with the some share in the Income Tax receipts have been Secretary of State for India. This system was found top-heavy in the days of his successors, and a continuous process of devolution set in. In the matter of finance the measures set in. In the matter of finance the measures felt that this does not go far enough, and there is took the form of long-term "contracts" with still this pressure for some share in the revenues the Provincial Governments and later in the still this pressure for some share in the revenues the Provincial Governments, and later in the from the taxes on income which, it is believed, assignment of definite heads of revenue to the alone can put the industrial Provinces on a Provincial Governments, thus removing the dual authority and responsibility which had clogged progress A much clearer cut was made when the great reform scheme embodied in the Government of India Act of 1919 was passed Here, for all practical reasons, Provincial finance was entirely separated from the finances of the Government of India, and with one reservation the Local Governments were made masters in their own financial houses The reservation arose from the circumstance that the funds of the Government of India did not then permit them to do entirely without contributions from the Provinces These concontributions from the Frovinces These con-tributions were fixed in the shape of definite sums, which the Provincial Governments had to find from their own resources and pay to the Government of India in cash. They varied between Province and Province, on a scale which at first sight seemed inequitable, but which had a definite logical basis. The total of these contributions was a little less than ten crores of rupees This was admittedly a tem-porary expedient, to last only so long as was necessary for the Government of India to reduce responsibility of the revenues to the point when they would balance without drawing from the Provinces They were an open sore, each Province claiming that it paid an undue proportion of the total contribution, and that it was starved in consequence There was no possibility of adjusting these differences, the finances of the Government of India spreading the charge over the other Provinces permitted. They finally disappeared from the by giving them back less in income tax that Budget in 1928-29,

But this did not end the discussion indeed it was only the first phase A large frame remains, and despite the extinction of the Provincial contributions the finances of some of the Provinces are in an unsatisfactory state, Broadly the Issue may be put in this way. The Government of India has taken the growing heads of revenue those which issue from taxes on in come and customs. The Provinces are left with resources which are either almost static, like land revenue, or which are actually declining, as with excise where steps are being taken to reduce the consumption of alcoholic liquor in response to the strong Indian sentiment towards problbition. At the same time the Provinces are con fronted with the great growing sources of expenindent of the cenditure, like those on education and sanitation as is the which bulk largely in Provincial budgets. The After the middle burden is heaviest in the industrial provinces, Whilst therefore reinoperative in practice Whilst therefore re-lief is felt at the abolition of the Provincial Contributions under the 1019 settlement, it is

### A Review.

The financial organisation was, of course, reviewed as part of the work of the Round Table Conference. A sub-committee of the Federal Structure Committee was appointed under the chairmanship of Lord Peel to examine the question of federal finance and the principles embodied in the sub-committee's report were endorsed by the parent Committee as a suitable basis A Federal Finance Committee with Lord Eustace Percy as Chairman was appointed at the end of 1931 to subject to the test of figures, the suggested classification of revenues by the Peel Committee and to estimate the probable financial position of the Federal and of the Provincial Governments under the proposed scheme In the course of their report the Federal finance Committee said that the transfer to the Provinces of taxes on income though defensible in principle would leave the Centre in deficit. Therefore the Peel Committee suggested a mothod of transferring to each Province a percentage of the share of income tax estimated to be attributable to it But in view of the incomplete data on which the estimates were readed a special review is said estimates were made a special review is said to be necessary at the time federation is established in order to fix the initial percentages. A strict allocation on a percentage basis would still leave some Provinces in deficit and so as at a right than decreased. Committee reported as follows -

#### Federal.

Excise on Tobacco—The present position in regard to this tax appears to be that a substantial revenue may be expected from a system of rend licenses and fees, but that an excise duty imposed in the near future could not be relied on to yield a substantial revenue. There is general agreement that such a duty could not be imposed on the cultivator, and it is doubtful whether a duty on the manufactured product could be successful while manufacture continues to be so largely carried on in small establishments and even as a domestic industry Vend licenses and fees can obviously be imposed only by the Governments of the Units, and their imposition by the Provincial Governments is non being encouraged by the Government of India The difficulties in the way of a federal excise may be exercome in course of time, but it would be unsafe for us to rely on this in the near future.

Excise on Matches—The imposition of an excise duty on matches is already under active consideration, and we feel justified in contemplatmg the existence of such a duty from the outset of federation We are not leed that the probable net yield of the tax for all-India at a reasonable rate, with due allowance for reduced consumption, would be about 8 crores, of which at least 2 50 crores would be raised in British India

Other Excises —It is possible that other excise duties may occupy an important place in the fiscal Policy of India in the future, but we do not feel warranted in relying upon the introduction of such measures in the early years of federation.

Monopolies — We have evamined suggestion, made at the Round Table Conference, that federal revenues should be augmented by a few selected monopolies. From the fiscal point of view it is only in very special tircumstances that a monopoly, whether of production, manufacture or sale, is to be preferred to an excise duty as a means of raising revenue Except in so far as the proposals already noticed in regard to tobacco may be regarded as a monopoly, we can suggest no new commodity to which the monopoly method could be applied with advantage . The manufacture of arms and explosives, which has been suggested as and explosives, which has been suggested as a possible monopoly, is already subject to license. Public utility monopolies stand on rither a different footing, but the only new federal monopoly of this kind that has been suggested to us is broadcasting, the revenue from which must be entirely problematical.

Commercial Stamps—In the Peel Report it was observed that "There is much to be said for federalising Commercial Stamps on the lines of various proposals made in the past," but no definite recommendation was made We have examined this suggestion, but on the whole we cannot recommend it, at least as an immediate measure

The yield of certain stamp duties which might be placed in this category was, in 1980-31, slightly more than one crore. This was a yield at present would be negligible

Regarding possible new sources of revenue, sub-normal year, and the normal yield snould Federal or Provincial, the Federal Finance be somewhat higher In 1930-31 about 40 per of the yield was received by Bombay (one-eighth of this being attributable to Sind), 27 per cent by Bengal and 12 per cent by Madras The loss of revenue resulting from the federalisation of these duties would therefore be unevenly distributed, and their federalisation would not ease the problem of distributing income-tax.

> Further, there are obvious difficulties in the way of separating stamp duties into two classes. commercial and non-commercial. It only be done by means of a schedule, and a large element of purely arbitrary selection would be involved The simple constitutional solution would be to class all stamp duties as provincial sources of revenue.

> We have given some attention to the question considered by the Federal Structure Committee whether the Provincial Governments should be given power also to fix the rates of duty on all stamps, or whether legislation on this subject should be reserved, wholly or partially, to the Federal Government. We suggest that the Federal Government should retain the power to legislate on behalf of the Provinces in regard to those stamp duties which are the subject of legislation by the Central Government at the date of federation The duties which are now The duties which are now the subject of central legislation are those on acknowledgments, bills of exchange, share certificates, cheques (not now dutiable), delivery orders in respect of goods, letters of allotment of shares, letters of credit, insurance policies, promissory notes, proxies, receipts and shipping orders. We understand that proposals have been under consideration for adding other duties to this list, and would suggest that, if any such additions are contemplated, that should be made before the establishment of the Federation

We ought to add, in this connection, that difficulties already arise in estimating the share of each Province in the proceeds from the sale of postage stamps for use on taxed documents, and these difficulties may be expected to lead to considerable friction with the Provincial Governments unless a more satisfactory system can be devised.

Finally, in proposing that the proceeds of commercial stamps should be assigned to the Units, we have to some extent been influenced by a doubt whether the problems arising from the imposition of federal stamp duties in the States might not be disproportionate to the revenue involved We do not, however, wish to prejudge the possibility that, as part of the general federation settlement with the States, it might be found desirable to include these duties among the sources of federal revenue This consideration might well outweigh the reasons which have led us to recommend that commercial stamps should not be made a source of federal revenue

Corporation Tax —From the financial point of view, it seems clear that, if a corporation tax were imposed on companies registered in the States on the same basis as the present super-tax on companies in British India, the

#### Provincial

Taxation of Tobacco —We have already dealt briefly with this question and have suggested that the taxation of tobacco, otherwise than by excise on production or manufacture, should rest with the Units, but that the Federal Government should be given the right to impose a general federal excise. This distinction is, we think, justified by the fact that ex hypothem the introduction of excise duties on manufacture will be difficult, if not impossible, until manufacture becomes more highly industrialised, and as that development takes place an excise levied at the factory by one Unit of the Federation would be a tax on consumers in other Units It will be seen from our later proposals in regard to powers of taxation that the federalisation of tobacco excise would not preclude the Federal Government from assigning the proceeds to the Units, if it so desired

There is, unfortunately, no material which would enable us to estimate the yield of any of these forms of taxation. The provincial taxes will take some time to mature, but eventually they may be expected to form at least a very useful additional source of provincial revenue

Succession Duties —Bombay 14, we believe, the only Provincial Government which has attempted legislation for the importion of succession duties, and the attempt was unsuc-We cassiul We understand that even that Government would have preferred that legislation should have been undertaken by the Government of India We propose cleewhere that succession duties should be classed among taxes leviable by the Federal Government for the benefit of the Units, but clearly the facts would not justify reliance on them as a source of revenue in the near future. understand that even that

Terminal Taxes—We have been asked to weigh the issues which arise from the proposal to introduce terminal taxes generally as an additional source of revenue for the Provinces As the arguments for and against this proposal have been so fully set forth in previous reports, it scarcely seems necessary to re-state them here The feature of such taxation which has impressed us most seriously is its operation as, in effect, a surcharge on railway freights Where municipal octrons are in force, there appears to be a tendency to substitute for the general lovy of dues on all goods entering the municipal boundarles the simpler alternative of a terminal tax collected at the railway station, and there is already a danger that this habit may result in diversion of traffic to the roads We therefore recommend that, if terminal taxes are to be regarded as a permanent part of the financial structure, they should be imposed by the Federal Legislature for the benefit of the Units Such terminal taxes as are already in existence (mainly as municipal taxes) will fall into much the same category as other taxes classed as federal which, at the time of federation, are being levied by certain Units, but though it may be necessary for this reason to authorise the municipalities and Provinces concerned to continue to raise these taxes, they should be excise on matches is the only tax which allowed to do so only within limits laid down justified in taking into account as an immediate by the Federal Legislature. Assum and Bihar reinforcement of federal revenues.

and Orisea are the two Provinces which, having few or no municipal taxes of the kind at present, are most desirous of deriving provincial revenue from this source. While we do not rule out the mossibility of terminal taxes in these two Pro luces and clarabere as a temporary expedient. in view of the practice which has grown up in various parts of India, we are not prepared to regard terminal taxes as a normal source of

of Apricultural Taxation Incomes -- We have not considered the broad issues of policy involved in the taxation of agricultural incomes. but we have considered, as we were commissioned to do, the more limited question of "the possibility of empowering individual Provinces, if they so desire, to raise, or appropriate the proceeds of a tax on agricultural incomes." In view of the close connection between the subject and land revenue, we agree that the right to impose such taxation should rest with the Provinces For the same reason, we think that this right should be restricted to the the Provinces tains this right should be restricted to the taintion of income originating in the Province concerned. There will presumably be no difficulty in drafting into the constitution a definition of agricultural income which has so long been recognised in Indian income-tax law and practice

We are not prepared to express a final opinion as to whether agricultural and non-agricultural income should be aggregated for the purpose of determining the right of the assessed to exemption and the rate of taxation to which he is liable on either section of his income; and we doubt whether any provision need be inserted in the constitution on this point since we are advised that, in practice, it would scarcely be possible for either the Federal or a Provincial Government of the late of the constitution for the late of the late o to take into consideration income not liable to taxation by it, except with the consent and co-operation of the other Government

We are aware of no reliable data for estimating the yield of such taxation

Conclusion—In this survey of possible sources of additional revenue, we have deliberately left out of account the question whether or to what extent it would be possible whether or to what extent it would be possible. vilether or to what extent it would be possible to increase the yield of existing taxes. We have confined ourselves to an examination of new sources, and in this field the results of our survey are not encouraging. We have found that such provincial taxes as appear to be within the sphere of practical politics in the immediate future cannot be relied on to yield any substantial early additions to provincial any substantial early additions to provincial revenues. In using the phrase "practical politics," we are not, of course, expressing an opinion as to whether this or that tax ought or ought not to be imposed, or even as to whether It is or is not likely to be imposed by the legislatures of autonomous Provinces when these are constituted We are only noting the fact that the opposition to certain forms of tayation of the description. taxation, or the difficulty of their imposition, is still so great that they are not likely to be adopted soon enough to influence the financial situation at the time when the Federation comes into being In the federal sphere, the excess on matches is the only tax which we feel instifted in taking into account as an immediate

Railway Finance -The year 1021-25 was [ marked by a step of great importance in the better organisation of Indian finance. As is explained in detail under the section Railways (q.e.) the Government of India is a great railway owner. It owns and operates itself a very large proportion of the railway system through what are called State Railways, it is the principal shareholder in other lines which are leased to Companies which operate them. Prior to the year in question, the railway finances were incorporated in the general finances of the country. The effects of this were unfortunate. As the finances of a State are not managed on commercial lines, the railways were not conducted on commercial principles. Then the annual allotments to railway expenditure were not determined by the needs of the railways themselves, but by the amount at the disposal of the Government of India The evil effects of this policy were forcibly exposed in the report of a strong committee of investigation, usually called after the name of its chairman, the Acworth Committee, which recommended the entire separation of the Railway Budget from the depression, the railways have been unable to general finances. Some delay incurred in giving make the contribution to general revenues.

ſ

effect to this recommendation, but it was carried out in the year 1021-25. The bases of the settlement were complete separation of finance: a definite annual contribution from the railway revenues to the general revenues; and the creation of a Standing Finance Committee of the Legislative Assembly to review estimates of railway expenditure before they are placed before the Assembly. The railway contribution was settled on the basis of one per cent. on the capital settled on the basis of one per cent. on the capital at charge, plus one-fifth of the surplus profits; further, if after the payment of the contributions so fixed the amount available for transfer to Railway Reserves exceeds the sum of Rs. 3 crores, one-third of the excess should be paid to the General Revenues. The effects of this change are expected to yield to the General Revenues a fixed contribution from the railway property instead of a varying figure destructive of accurate budgetting, and to give to the railways the usufruct of their operation and secure management and development on commercial principles. and development on commercial principles.

### I RECENT INDIAN FINANCE.

The year 1924 marked a distinct and very Those important stage in the finances of India who have studied the histor: of Indian finance will remember the general trend of the country's balance shect. Up to the outbreak of the war it was a record of very careful finance, with a general surplus of revenue over expenditure, all such surpluses, save when they were in the nature of "windfalls" going to Throughout the war the avoidance of debt the finances were carefully handled and with certain moderate increases in taxation the accounts were made to balance. But com-mencing in 1919 a lamentable change came over the situation. The wanton invasion of India by Afghanistan meant a war which cost the exchequer directly some 34 crores of rupees Nor was this all. Whilst the military resis-tance of Afghanistan to the Indian forces was contemptible, and Kabul lay open to easy selzure if it had been thought worth while to seizure if it had been thought worth while to occupy it, the effect of this attack was to set a large part of the North-West Frontier ablaze and to thrust on the Government of India a series of costly expeditions. When these were completed, there remained the necessity of establishing a new Frontier system to take the place of that which collapsed in 1912, This especially in the notoriously troublessine country of Wazingan (a. s. Frontier) involved. country of Waziristan, (o. v. Frontier) involved country of Warins'an, (a. v. Frontier) involved the occupation of certain dominating posts and of connecting them with each other and with the advanced militar, ristions of India by a series of ver, expensive rosis. This abnormal expenditure discoved the invareat equilibrium of the whole country. Not is it possible to acquit the Figure Department of the Government of India in the chimic postore was period of a relatation of that close country of expenditure which in previous was had balanced the account stem in the Facts of famine and pages. The results was that the accommulated departs of the Government of India reached the training famine of Results of the Government.

Retrenchment and Toxulion.—Owing to the insistent demand for retronchment the Government of India appointed in 1922 a retrenchment committee, on the model of the Geddes Committee which overhauled the extravagant post-war expenditure of the British Government. This committee is generally called after its chairman, the Incheape Committee, It sat in 1923, and presented a report which recommended reductions in expenditure which amounted in the aggregate to Rs. 18 crorer,

Tinancial equilibrium was calabifried and a surplus realised in the Budget of 1922-24.

Statement comparing the netual Revenue and Expenditure of the Central Government since 1921-22.

### II. THE PRESENT FINANCIAL POSITION.

world, felt the full force of the economic blizzard which began in 1930 and attained its maximum the following year. The net result from the Government of India's point of view the Government of India's point of view was the introduction during 1931 of two Budgets, the ordinary Budget in the spring of the year and a supplementary Budget containing frosh taxation proposals in September When Sir George Schuster faced the Legislative Assembly at the end of Pehruars, he had a sorry tale to tell Trade depression, coupled with civil disobedience movement, had completely vitiated the estimates made for 1930-31 These estimates showed a surplus of Rs 86 lakks; the revised estimates worked upto a deficit Rs 13.56 crores, which the Finance Member said would remain uncovered and would be added to the unproductive debt. The main items of deterioration as compared with the Budget can be summarised as follows :-

Lakhs. revenue heads, viz., Important Ćustoms, Taxes on Income, Salt and Oplum (net) 12,10 Posts and Telegraphs (including Telegraph the Indo-European Department) 89 headings, Finance viz, Debt and Mint 1,38 services, Currency Other heads

Total Rs.

14,42

Turning to the estimates for 1931-32, the Finance Member said they must face a fall in fax revenue, as compared with the current Budget estimates, of no less than Rs 13 16 crores, including a drop of Rs 8 crores in Customs and 41 crores in income tax. The total deterioration under Finance headings was Rs 376 lakhs and on commercial departments Rs 118 lakhs. This meant a total deterioration of Rs. 18 10 crores as compared with the Budget ostimates for the current year, and as those provided for a surplus of Rs 86 lakks the net deficit would be Rs 17 24 crores To meet this deficit the Finance Member announced a cut of Rs 175 lakhs in army expenditure, and retrenchment to the extent of Rs 98 lakhs in civil expenditure, making a total saving of Rs 273 lakhs. The estimated deficit was reduced thereby to Rs. 14 51 crores, which he proposed to cover by fresh taxation

New Taxation Proposals—His proposals were grouped under two heads, Customs and Income Tax Referring to the first the Finance Member said · "The heads in respect of which I propose alterations of the substantive tariff itself, are liquors, sugar, silver bullion, beteinuts, spices and exposed cinematograph films The liquor duties are to be enhanced appreciably, the duty on beer and the like is at present undoubtedly low relatively to those on other alcoholic beverages and will be raised by about 66 per cent above the present level, while those on wines and spirits (except dethus reducin natured spirit and spirit used in drugs and 12 68 crores.

India, in common with other countries of the medicines) will be raised by between 30 and 40 orld, felt the full force of the economic blizzard | per cent. The duly on sliver bullon I propose to increase from 4 to 6 annas per ounce. The other items mentioned will be transferred from the general rate of duty (now 15 per cent ad valorem) to the "luxury" rate at 30 per cent Of the surcharges, we have at a stroke added to the 10 per cent schedule a surcharge of 21 per cent, to the general or 15 per cent. schedule one of 5 per cent., and to the "luxury" or 30 per cent schedule one of 10 per cent By far the most important of these surcharges is that 5 per cent on the general revenue schedule of 15 per cent., and connected with this, I must mention a feature of particular importance We propose for this purpose to treat the basic duty of 15 per cent on cotton plece-goods on the same lines as the general 15 per cent schedule and to place the surcharge of 5 per cent on these goods also. The surcharge on the 15 per cent schedule is expected to yield 90 lakks for cotton piece-goods and 2,63 lakks for other goods. Coming now to the schedule of non-protective special dúties, here we have made additions appropriate to the general scheme, and I need only mention specially the surcharges that I propose to levy upon kerosene and motor spirit. Both customs and excise duty on kerosene are to be raised by 9 pies per gallon, while motor spirit is to bear a surcharge of 2 annas per gallon. Finally, I must explain my proposals as regards sugar The position is special, because, while I am now proposing an increase in the duty for revenue purposes, we had received, just when my budget proposals were on the point of completion, the recommendations of the Tariff Board for the protection of sugar Summarised, the the protection of sugar Summarised, the Board's recommendations are —(1) a basic duty of R4 6-4-0 per cut on all classes of sugar, including sugar candy, to be imposed for 15 years, (2) an additional duty of Re. 1 per cut on all classes of sugar to be imposed for the first on all classes of sugar to be imposed for the first on all classes of sugar to be imposed for the first on all classes of sugar to be imposed for the first on all classes of sugar to be imposed for the first on all classes of sugar to be imposed for the first on all classes of sugar. 7 years, (3) power to be taken to add 8 annas per cut to the duty at any time if the landed per cut to the duty at any time if the anneal price of sugar at Calcutta ex-duty falls below Rs 4 per maund, (4) no protective duty on molasses My own proposals for revenue purposes had been very close to this, for I had actually contemplated an extra duty round about Re 1 to Rs. 1-8-0 per cut What I have now included is an increase of Rs. 1-4-0 per cut. On all grades of sugar This. as I This, as I cwt. on all grades of sugar This, as I have said, must be regarded purely as a revenue measure pending consideration of the Tariff Board's recommendations The combined effect of all these proposals as regards Custom duties will be to produce an additional revenue next year of 0 32 crores We shall also obtain about 50 lakes more from the increased import duties of the product of the pr duties on galvanized pipes and sheets which the House discussed on 28th January last. This will raise the additional yield to 9 82 crores Incidentally, the new duties, which will operate from 1st March, and the increased duties on galvanized pipes and sheets, which came into force on 30th December, will add to our revenue for the current year a sum estimated at 88 lakis, for the current year a sum estimated at 88 lakis, thus reducing the current year's deficit to

Increased Income Tax.—Dealing with his proposed new tax on incomes, the Finance "The traable minimum income Member said for income-tax—Rs 2,000—will not be lowered. The rate of tax on the lowest rone up to Rs 4,999 will be raised by 4 pies The rates on higher grades up to Rs 30,090 will be raised in some cases by 5 pies, in some cases by 6 pies, and in the highest of these grades by 7 pies. At present the highest rate is reached at Rs 40,000 It is now 19 ples I propose a rate of 25 ples on incomes from Rs. 40,000 to Rs. 99,999, and a maximum rate of 26 pies on incomes of Rs I lakh and over Theestlmated yield of these increases is 5,07 lable gross or, deducting 53 lables on account of increased refunds, 4,54 laklianet In addition to this, I propose certain changes as regards super-tax. At present all assesses except Hindu undivided families are allowed a deduction of Rs. 50,000 in computing the income liable to super-tax. This will be lowered tolks 30,000 except for Hindu undivided families and companies, which will be allowed, an ounce which we are proposing is estimated as at present, a deduction of Rs 75.000 and to produce 75 lakhs from the import duty and Rs 50,000 respectively. In the new rone, 7 lakhs from the excise or 82 lakhs in all

Rs 30,001 to Rs 50,000 the super-tax rate will be open Above Rs 50,000 the graduated scales will be increased by 2 pies throughout. The flat rate for companies will be 1 anna as at present These changes will yield, it is estimated. 46 lakhs Thus the total estimated additional net revenue from taxes on income will be 5 crores Briefly they will add an extra charge of about 2 to 5 per cent on all incomes The rates of additional tax have been so adjusted as to produce, in the final result, an evenly graduated scale of burden increasing as the income increases, and this object must be borne in mind in interpreting our proposals. The total yield from the proposed changes in Customs duties and taxes on income thus amounts to Rs 14 82 crores, as against which the gap to be filled is Rs 14 51 crores, so that I am left with a small surplus of Rs 31 lakhs.

Silver Duty -Referring to 81lver, Finance Member said the increase of two annas

#### WAYS AND MEANS.

'The Bill in its recommended form was, how- A ten per cent cut in pay in both civil and ever, rejected by the Assembly by 60 votes to military departments would lead to a saving of 56, and was sent to the Council of State where it Rs 60 lakks in the current year and Rs 190 lakks It became law on being certified rnor-General The gap of Rs 105 was passed by the Governor-General lakhs caused by the amended income tax figures was partly filled by reduction of military ex-penditure to the extent of Rs 60 lakhs and by Rs 15 lakhs cut in civil expenditure

Other cuts made by the Assembly and accepted by Government included token reductions of Rs 100 in the demands for Customs, Income Tax, Executive Council and Army Department Two cuts of Rs one lakh and Rs 100 were made in the Rallway Board demand and were accepted,

Supplementary Budget —It soon became evident that the worsening of the trade depression had seriously yitlated the revenue estimates in the February budget, and in September Sir George Schuster came before the Legislative Assembly Schuster came before the Legislative Assembly with a Supplementary Finance Bill The Finance Member said that the returns for the first five months indicated that they would fall short of their budget estimates for customs by at least Rs 10 crores, the heaviest reductions being under cotton piece-goods, sugar, silver, spirits and liquor, excise on motor spirit, from and steel and in the jute export duty, while they expected a deficit of Rs 1½ crores on income-tax. Income from Railways and Posts and Telegraphs showed from Railways and Posts and Telegraphs showed a similar decline The total deterioration in income amounted to Rs 11 83 crores in tax revenue, Rs 5.48 crores on commercial departments, Rs 2 29 crores in general finance headings, Rs 23 lakhs under extraordinary receipts and Rs 23 lakhs under other heads As the budget levied on the increased duty "provided for a small surplus of Rs 1 lakh on the basis of the present estimates there would be a net deficit of Rs 19 55 crores Putting the deficit free list on which we think it justifiable to impose net deficit of Rs 19 55 crores Putting the deficit for the current year and next year together they a small duty on revenue grounds. The result of had a gap to fill of Rs 39 05 crores. He proposed to deal with the situation on three distinct lines, firstly, to reduce expenditure; secondly, to impose an emergency cut in salaries, and thirdly, per cent. There is, therefore, some justification to impose fresh taxation. Retrenchment for adding a 10 per cent duty to articles hitherto measures in civil expenditure he estimated would save about Rs 30 lakhs in the current year, and Rs 250 lakhs next year, while military expenditure; especially from the cotton mills, and I must turn next year would be curtailed by Rs 450 lakhs.

next year Turning to new methods of raising revenue the Finance Member said his first proposal would be an immediate increase in the salt revenue by abolishing the credit systems which would mean that the revenue would be increased by a crore of rupees each year on this account. The main plank of his new taxation proposals was to put a temporary surcharge on all existing taxes with the exception of Customs export duties, the surcharge being 25 per cent on the existing rates in each case. He proposed that the surcharge for the current year in income-tax should only be 121 per cent, but it would be collected at this rate on the whole year's income Government held that in the present emergency they were justified in reducing the income-tax exemption limit and imposing a small tax of four ples in the rupee on incomes between Rs 1,000 and Rs 2,000 per annum Dealing with special increases and new taxes, the Finance Member said "We propose to increase the import duty on artificial silk piece-goods from 20 to 40 per cent and on artificial silk yarn from 10 per cent to cent and on artificial silk yarn from 10 per cent to 15 per cent. We also propose to increase the duty on brown sugar from Rs.6-12-0 to Rs 7-4-0 per cwt This follows the Tariff Board's recommendation As regards boots and shoes, we propose that there should be imposed as an alternative to the 20 per cent duty a minimum of 4 annas per pair The duty will thus be 20 per cent. or 4 annas a pair, whichever is the higher We also propose to increase the duty on camphor and on electric bulbs from 20 to 40 per cent. As regards all these articles the surcharge will be levied on the increased duty."

acknowledge that their imposit on may appear increases were carried omitting the reduction to be in some wars inconsistent with previous of the minimum taxable income from Rs 2,000 policy. The justification must be the read for to Rs 1,000, and making the 25 per cent surcharge revenue, while as recards the cotton mills we may levied during 1922-33 applicable only to income claim that on believe their position will be over Rs 10,000 per annum. When the discussion improved by our surchard proposals, for under finished the Bull was returned to the Assembly these the imported on a cotton piece-goods will with a recommendation by the Governor-General be increased by our quarter. This more than that it should be preved in its oriental form, official the burden of anna per lb on goods made Load Willingdon pointed out that the areadfrom imported cotton and abords an effective ments must by the Assembly would reduce the answer to 700 ible criticisms on the grounds to expected revious by Rs 4 cross over catheen which I have referred. I have one more word months, and added "I am satisfied that I cannot to say as regards the incorrectax proposals." In consistentive with my re-possibilities allow the considering the cut to be applied to the salaries deficiency to remain uncovered." The Bull as of Government officials we considered what total amended was, love, re, rejected by the Assembly rejuct on of their empluments could fairly be by 63 votes to 49. It was taken to the In per cent, that represents what we think fair, thereafter certified as law by the Government if further necesses of income-tax were to be General.

Assembly Opposition.—The Finance Mem- and net military expenditure in 1935-33 values a statement and fresh texation pro-estimated at Rs. 67-39 lakhs which was Rs. 11.54 porals earne as a shock to the Assembly, and lakin less than for 1930-31 and Rs. 795 lakin strong opposition to certain sections of the Bill less than for 1930-31 and Rs. 795 lakin strong opposition to certain sections of the Bill less than for 1930-31 and Rs. 795 lakin strong opposition to certain sections of the Bill less than for 1930-31 and Rs. 795 lakin strong opposition to certain sections of the Bill less than for 1930-31 and Rs. 795 lakin strong opposition to certain sections of the bill less than for 1930-31 and Rs. 795 lakin strong opposition to certain sections of the of retrenchment the Finance Members said:

"For the present I would remind Homourable the need for still further retrenchment in the Members of the following broad facts, when the farmy densatis. When the Bill was discussed compare what we have achieved with the reconciling by clause, a motion was carried placing mendations of the various Retrenchment Committees by clause, a motion was carried placing mendations of the various Retrenchment Committees and the proposal to increase postal rates was civil Sub-Committees was Rs. 4,09 lakins, and rejected. Amendments to the moome fat we have against this achieved economies of

reduction of their employments could fairly by by 63 notes to 45. It was taken to the imposed. If the general rate of reduction is to be Council of State where it was presed and was

improed. If the contral rate of reduction is to be Council of State where it was pared and was an of the presents what we think fair, thereafter cutified as law by the Governor added, that would go beyond the reasonable limit. We therefore propose that irreter see of linear test of by way of surcharge on existing, budget on Nurch 71, 19.2 the Finner Memberates of by way of surcharge on existing, budget on Nurch 71, 19.2 the Finner Memberates of by way of surcharge on existing budget on Nurch 71, 19.2 the Finner Memberates of by way of surcharge on existing budget on Nurch 71, 19.2 the Finner Memberates of by way of surcharge on existing budget on Nurch 71, 19.2 the Finner Memberates of by way of surcharge for the first operation of the propose of the peak of the propose of the peak of the propose of the peak of the propose of the peak of the formal surception of the peak for the surcest of the peak of the formal surgested to produce Re 721-14 in 1, and for a propose of the peak of the formal for a long way to cover the defect of Re 92 lab in the commendations of the peak and I clear that the recent which would be left even if the commendations of the peak and I clear that the current peak of the peak and I clear that the current peak of the peak and I clear that the current peak of the peak and I clear that the current peak of the peak and I clear that the current peak of the peak and I clear that the current peak of the peak and I clear that the current peak of the peak and I clear that the current peak of the forest and I clear that the current peak of the peak and I clear that the current peak of the peak of the surface of the peak of the peak of the surface of the peak of the surface of the peak of the peak of the surface of the peak of the peak of the surface of the peak of the peak of the surface of the peak of the peak of the surface of the peak of the peak of the surface of the peak of the peak of the surface of the peak of the peak of the peak of the peak of the peak of the peak of the peak of the peak

Expenditure Estimates - The total uni

"I would mention two other striking results in this connection The first is the actual reduction in Expenditure. I have already given the figures from the accounts showing reasons which I have explained, we think it a roduction of 11,84 laklis for Civil and Military necessary to regard the revenue from import Expenditure (excluding Posts and Telegraphs) duties—at least on Japanese goods—as to some since 1930-31 The position may also be stated extent abnormal and not likely to be repeated in another way. If Honourable Members will Here therefore we have allowed for a drop of look at the enalytical table which is included the linancial Secretary's memorandum (which is propared now on a slightly different basis from that which I circulated in September) they will find that what I may describe as the net controllable administrative expenditure, civil and military (which excludes the cost of collection of taxes and of the administration of salt and Posts and Telegraphs expenditure) has been brought down from just over Rs 76 crores in 1930-31 to just over Rs. 64 crores for 1932-33, a reduction of about 16 per cent "

The second fact is of a more distressing nature but it indicates the magnitude of the effect which we have made. In pursuance of the retrenchment campaign the following appoint-ments in the Civil Departments (including Posts and Telegraphs) have been or will shortly come under reduction so far as information is at present available-

Gazetted officers 299 Ministerial establishment and superior establishment . 5,279 1,485 Inferior establishment Total .. 7,063

The 1933-34 Budget -In introducing the budget, the Finance Member summarised the results for the two previous years The results for 1931-32 had turned out to be Rs. 2 crores better than anticipated in the budget speech and the account for the year showed a deficit after providing nearly Rs. 7 crores for the reduction of debt of Rs 114 crores For the year 1932-33 the latest revised estimates indicated that the arriver and the first revised estimates indicated the first revised estimates indicated the first revised estimates indicated the first revised estimates indicated the first revised estimates indicated the first revised estimates indicated the first revised estimates indicated the first revised estimates indicated the first revised estimates and the first revised estimates indicated the first revised estimates and the first revised estimates indicated the first revised estimates and the first revised es ed that the surplus would be Rs. 217 lakhs or Rs 2 lakhs more than was estimated continued to estimate revenue for 1933-84particularly customs revenue—is, in view of the completely uncertain and abnormal conditions, a task of quite unprecedented difficulty. Indeed I may say that accurate estimation is impossible In these circumstances and for the reasons which I have explained, we have thought that the most reasonable course is to assume that the general position next year will be the same as for the current year, neither better nor worse, and in particular that India will be able to maintain the same purchasing power for commodities imported from abroad.

Customs — The assumption, however, that the value of imports will be maintained does not necessarily imply that the value of the import duties will also remain the same.

Rs 4,33 lakks or nearly 87 per cent—before our revenue. On these considerations we think allowing for terminal charges which, of course, it necessary to allow for a drop of one error the committees did not take into account." will not be offset by any increase under other heads.

> In regard to cotton piece-goods also, for 30 lakhs

> As against these reductions we have thought it safe to count on a small revenue (25 lakhs) from sliver imports—because having closed the gap in our land customs line on the Burmese frontier, through which a large trade in silver from China was suddenly developing in the course of the last year, we think it reasonable to expect a moderate resumption of dutable imports

> Making allowance for these and other minor variations, our customs revenue estimates for next year are put at 51,25 lakhs showing a reduction of 104 lakhs from the revised estimates of the current year.

> The position as regards net receipts may be summarised as follows ---

,Revenue (Lakhs). 52,31 27 52,28 55 Budget Estimate, 1932-33 Revised Estimate, 1932 33 Budget Estimate, 1983-34 51,24 60

Civil Expenditure - The budget estimate of Civil expenditure for the current year (1932-33), 1 6, excluding military expenditure, expenditure on Commercial departments and Debt services, was 20,05 lakhs Our revised estimate now gives the figure as 20,89 lakhs There is thus an apparent increase of 24 lakhs But a But a closer examination shows that this increase, does not denote any increase in real expenditure, and, indeed, that the economy in recurrent expenditure has been greater than that which we promised The figure of expenditure as shown in our accounts has had to be increased because special items amounting in all to 682 lakhs, but the great bulk of which do not denote real expenditure, have had to be included.

"Under the other heads of real expenditure we shall have achieved during this year economies of Rs 45 lakhs more than we promised may be remembered that in my budget speech in March last I stated that, broadly speaking, against a total retrenchment in expenditure of Rs 499 lakhs recommended by the four civil sub-committees. Government had achieved sub-committees, Government had achieved economies of 433 lakhs, or nearly 87 per cent. before allowing for terminal charges which the committees did not take into account. The results according to the revised estimate for the current year which I have just given show that the actual economies achieved in normal expenditure amount to 45 lakhs more than this, that is to say, to a total of 478 lakhs, or nearly 96 per cent of the amount recommended by the retrenchment committees.

I have already explained the special position "Turning to the estimates of expenditure as regards sugar, showing how the present under these civil heads for next year, I am glad development of the Indian industry is affecting to be able to report a still further improvement

As compared with the current year with its [Expenditurebudget estimate of 20,65 lakhs and the revised estimate of 20,60 lakhs, the estimates for 1933-34 are 20,63 lakhs, that is to say, a reduction of 36 lakhs on the current year in spite of the following facts; first, that we have allowed for reducing the cut in pay to 5 per cent thereby incurring extra charges of 28 lakhs on these particular civil heads, secondly that we have to meet the normal increments in time scale pay which still involve an annual addition of something like 15 lakhs, and thirdly, that we have to meet new obligatory expenditure amounting to about 17 lakhs, the nature of amounting to about 17 lalks, the nature of which I shall shortly explain. If all these items are taken into account it will be seen that the total of the net reductions otherwise effected under the normal heads of expenditure amount to no less than 96 lakhs Honourable Members may say that they are not concerned with this figure but only with the saving of 36 lakhs actually effected, but I have given these cyplanations in order to show how we are continuing the retrenchment effort and what a constant effort is required 'merely to prevent expenditure from growing'"

Military Expenditure - "When I turn to the provision for the Military or Defence Budget the results are equally, or even more, satisfac-tor. I or the current year (1932-33) allowing for the full effects of the 10 per cent cut in pay, the net budgetary allotment was Rs 46.74 crores for next year the net expenditure provided for in the estimates, after allowing for an extra charge of Rs. 521 lakes due to the rejuction in the cut in pay to 5 per cent is Rs 46 20 crores That is to say although the pay bill is increased by Rs 521 lakes the net expenditure is to be reduced by Rs 54 lakes "

Military: Civil heads - Not reduction effected in spite of part restoration of pay cut costing 791 lakhs under these heads as compared with the revised estimates (This net reduction together with the reduction of 5 under Irrigation and Currency and Mint taken on the revenue side gives a total reduction of 90 as mentioned in para 61)

> 163 Total 338

85

As a result of the changes thus summarised the net deterioration for next year is estimated at 175 lakhs, and thus the surplus of 217 lakhs shown in the revised estimate for the current year will be reduced to surplus of 42 lakhs.

The Cut in Pay -Concerning the Government's decision to restore half the cut in pay the Finance Member said that the total cost was Rs 108 lakhs.

As against this the Central budget will recover as a result of the withdrawal of the exemption of income-tax surcharges and the tax on incomes below Rs. 2,000 from Government officials—not only officials paid against the Central budget, but officials of the Railways and officials serving under the Provincial Government. ments—a net increase in income-tax receipts of 53 lakhs

The net cost of the proposal to the Central Government is thus 55 lakhs

Changes in Daties.—The budget announced changes in the import duties on boots and shoes and artificial silk goods

Decisions,-The Assembly threw out proposal for a stamp duty on cheques and by 59 votes to 33 carried a resolution to reduce the rate of income tax from 4 pics to 2 pics on incomes between Rs 1,000 and Rs. 1,500.

The 1934-35 Budget—Summing up the results for 1933-34 when introducing the 1934-35 budget the Finance Member said that with the arrangement to provide Rs 3 crores for debt reduction instead of the Rs 6.89 crores due under the debt reduction convention the year would close with a surplus of Rs 120 lakes This sum Government proposed to set aside This sum Government proposed to set aside as a special fund to cover relief measures in respect of earthquake damage For 1934-35 Government were expecting a drop of Rs. 230 lakis in revenue which was more than accounted for by the anticipated falling off in sugar import duties, while expenditure would be Rs. 2 lakis higher. In order to provide an even balance for 1934-35 it was necessary to find means of improving the position to the extent of Rs. 153 lakis

A loss in import duties of 225 laklis Was auticipated.

Other Revenue — The changes in other heads of Revenue do not call for any detailed comment We are allowing for a slight recovery of 12 lakhs in Taxes on Income to a total of 171 crores, and we should have put this 25 lakhs higher if it had not been for the losses which must be anticipated from the earthquake. We are also allowing for an increase of 18 lakhs on salt and for a drop in the gross receipts from Opium of 64 lakhs. The declining revenue from the latter item owing to the policy adopted in 1925 has been another cause of budgetary difficulties. Altogether the total drop to be allowed for in Revenue as compared with the Revised estimates for the current year is 2,74 lakhs, which is more than accounted for by the loss on sugar.

Expenditure —On the subject of expenditure Sir George Schuster said -

So far as concerns expenditure, we are still scarching for further economics, and have regidly maintained our rule that no new item of expenditure shall be admitted unless it is absolutely obligatory or unless it is likely to be economically 'productive We have also, as I have already announced, decided that the per cent cut in pay ought to be retained for another year. As a result there is a very another year. As a result there is a very satisfactory reduction of 2,12 lakhs in the Budget provision for next year as compared with the Budget for the current year, and of 2,90 lakhs as compared with the actuals for last year (1932-33) for, while expenditure on Civil Administration has been kept practically unchanged in spite of the normal increments in pay, there is a substantial saving on interest charges due to conversion schemes and the improvement in Government credit, while the military contribution from His Majesty's Government means a big reduction in the Army Budget.

The demand under the Defence head stands for next year at 44 38 crores This is 4 lakhs less than the Revised estimates for the current year and 1,82 lalls better than the Budget estimate The latter big reduction is of course estimate The latter big reduction is of course due to the payment now made by His Majesty's Government as a result of the finding of the Capitation Tribunal, to which I have already referred. The House is fully informed as to the facts in this case, and I need not add further explanations, but I wish to take this occasion to review the course of military expenditure during the period of my office as Finance Member The salient fact is that the total demand has been reduced by no less than 10 72 crores. has been reduced by no less than 10 72 crores, from 55 10 crores in 1929-30 to the present figure of 44.38 crores. This is a remarkable reduction and I venture to think that if I had prophesied its achievement in 1929, my prophecy of legislation by the Central Government which there with these will enable the Provincial Governments to apply propnessed its achievement in 1929, my propnety would have been greeted either with incredulity or, among those who gave credence to it, with extreme satisfaction. In the debates at that time the great demand was always that we should get Defence expenditure down to the so-called Incheape figure of 50 crores. Yet now we are nearly six crores below that.

other nothing—in fact a surplus balance of about tailed 1 lakh This is a reduction of 1,17 lakhs on 1 lakh This is a reduction of 1,17 lakhs on the budget for 1933-34, though it is actually about the same as for the revised estimates. The comparison is complicated by the position as regards war debt payments. In the budget of 1933-34 we provided 88 lakhs against this life budget has a no account was made the of 1933-34 we provided 88 lakes against this liability, but as no payment was made this amount was saved, and, as I have already explained, is the main reason for the saving on the revised estimates. As regards 1934-35, His Majesty's Government has already agreed to the postponement of the instalment due in June 1934, but we have made provision for the second half year's instalment, and we have also assumed that the outstanding arrears, excluding assumed that the outstanding arrears, excluding the amount in suspense, will be capitalised and the total discharged by equated payments ending 1952 to cover principal and interest On this basis we are making provision for 58 lakhs in the 1934-85 budget Excluding these War Debt provisions the comparison between 1933-34 and 1934-35 works out as follows —

1933-34 Budget 28 lakhs.

1933-34 Revised Nıl.

1934-35 Budget -59 lakhs (2*6*, net surplus).

There is thus really an improvement of 87 lakhs on the budget for 1938-34 and of 59 lakhs on the Revised.

Under Interest on Other Obligations there is an increase in the budget provision for 1984-35 of 72 lakhs over the budget for 1938-34 and 68 lakhs over the Revised estamate This is accounted for by an extra charge of 50 lakhs in respect of bonus on Post Office Cash Certificates, while the balance represents mainly interest on the increased amount of Post Office Savings Bank deposits.

I might sum up the result by saying that as regards Interest charges, including both Interest on Ordinary Debt and Interest on Other Obligations, we have to provide next year 45 lakhs less than was allowed for in the budget of 1933-34, but 68 lakhs more than we are allowing in the revised estimates, and that as against the latter increase we are providing 58 lakhs more on War Debt and 50 lakhs more on Post Office Cash Certificates.

Changes in Duties —The Finance Member announced the imposition of an excise duty on sugar in the following words —

of legislation by the Central Government which will enable the Provincial Governments to apply win enable the Provincial Governments to apply schemes for enforcing a minimum price for cane to be paid by the factory to the grower. As I have already stated, the present duty of Rs 9-1-0 per cwt is Rs 1-13-0 above the basic duty of Rs. 7-4-0 recommended by the Tariff Board. In their report, however, the Tariff Board recommended that there should be Debt Services—Regarding the interest on debt, the Finance Member said —It is a notable fact that the net figure for 1934-35 sugar was being imported at a price less than under Interest on Ordinary debt is less than Rs. 4 per maund to Calcutta We propose to

assume that the conditions justifying this extra Taking the price of effect which have been ruling margin of protection are likely to continue in freeently in London (about 194s to 2014, per margin of protection are factly to continue in tree first in London (anome 10 for 20 for per existence for the present, and therefore to have standard own), the price in Rombys have been and to impose an exist duty of Re. 1-5 to per cut. This ground about the 55 per 100 toleranagain a mid to impose an exist duty of Re. 1-5 to per cut. This ground about the 55 per 100 toleranagain and on interest this will yield Re. 1,17 lake. London price of 10 for waverfulfied that the and out of this we propose to set while an amount equivalent to a must per cut, representing about duty and other charges, ought to be Re. 61-11 to 7 lakes, we a fund to be distributed among the per hundred toler, so that it looks as if the Rom. Provinces where white sugar is produced for his prices have been feeping at a letel at least the purpose of assisting the organisation and its fill-D per limitohan below the full parity, operation of co-operative societies among the The duty of 74 annual per ounce is equivalent gine giovers so is to hilp them in securing

Mimbir Duties -Ihr 1 inance 1 obacco raid -

Under our present tariff, as modified by the out at something like double the duty on the tobleco used in making similar cigarettes in and the result has been to disert the manufacture of the great majority of the leading brands of eigarettes to factories in India belonging to the same interests as previously imported these brands from abroad. Such an industrial development has never made a claimand I do not think it could make a good claim that it sitisfies the principles of disciminators protection and should therefore receive abnor-We have mal encouragement from the tariff. now decided to fix the relation between the duty on elgarettes and the duty on raw tobacco on a more rational basis, and we have consider-oble hopes that, while not depriving the interest concerned of reasonable assistance, it will bring back the class of eigarette concerned into the field of open competition between the imported and locally made article, and result, without detriment to the interest of the consumer, in some increase of revenue from import duties. We propose to take for eightetics a specific duty roughly corresponding to the identical amount in the identical amount. that would have been paid on the quantity of leaf contained in the eighrettes and to add to this specific duty the normal revenue duty of 25 per cent ad salorem, thus leaving the local andustry with no more than the benefit which is enjoyed by every non-protected industry engaged in the manufacture of goods which are subject to our present normal revenue duty of 25 per cent. The details are as follows.

At present what I may call the basic rate of duty on eigarettes is Rs 10-10 per thousand while there are smaller classes which are assessed at Rs. 15 and Rs 8-8 per thousand, the division between these classes being dependent upon The present rate of duty on raw tolmeco is Rs 2 per lb standard and Re 1-8 preferential, (Imports entitled to the benefit of preferential duty are negligible). The revised rates that we propose are

On raw tobacco · Rs 2-0-0 per lb. standard and Ro. 1-14-0 per lb. preferential.

The duty of 74 annus per ounce is equivalent to Re 17 11-13 per 100 toles. It appears there fair pilies, or for other purposes directed to fore that we might reduce the duty by one-third, the same end

i.e., by 21 annas per onne without thereby

Tabasea Duties—The Linance Member neces with affecting the Bombay pike at all, for it would still be somewhat below the London parks.

> Export Duty on Hides -- The export duty on ran blde swas abolished by the 1971 35 budget

Excise on Matches - Annuaring that the Government Intended to hand over hill the into export duty to the fate producing Produces, the Planus Member said that the Govern ment of India would recoup their loses by buch an imposing a key on matches at the rate of Its 24-0 per gross of boxes on matches made in British India

> Decisions —The Assembly accepted the whole of the financial plan except to the extent that Government them this accepted a change in the match excleduty. The changes as summed up by the belief Committee which examined the Bill, were -"I he most important question which con fronted us n is whether the duty as fixed by the Bill would so react on the retal selling price of in teles as to bring about a very serious diminution of siles. In order to avoid this it seemed to us recential that the duty be so regulated ne to make it possible a rersonable sized box of matches retailed singly in bazaars at the price of one pice.

Affer very careful consideration no have come to the conclusion that if this result is to be achieved and a sufficient margin of profit left for retaliers and manufacturers, the rate of excise duts initially, at least, should not be fixed higher than one rupee per gross of boxes containing on average 10 matches

We hold that the duty could be fixed at corresponding rates for matches in boxes of 60 or 80, and that the classification of matches according to these standards is most suitable and convenient from the administrative standpoint.

From matches packed otherwise we have left the duty to be fixed by the Governor-Generalin-Council "

Telegraphs -The changes in postal and telegraph charges were

25 per cent ad valorem

Silver.—A reduction in the silver import by 21 annas to 5 annas per ounce.

The Finance Member said to-day we think we can lower the duty without risk of doing so with additional 11 anna for successive weights

of 24 tolas or fractions. a lighter unit of weight and will undoubtedly benefit the poor citizens and the business communits. Allowing for a recovery of 10 per Government may see fit to take at the end of cent in truffle we estimate that in the first that year. I hope that this extension will be verified reduction will involve a loss in revenue accepted by the House though I should perhaps of 27 lakes, but we have good reasons to hope make it clear that, if it should prefer to remove that in the second year this loss will practically the duty at once in this matter at any rate we disappear, and that thereafter there will be a gradually increasing net gain.

is a second change in postal charges we propose the remission of the extra pie per five plee embossed envelope which was imposed in 1931 to recover the cost of manufacturing the envelope. This is more of the nature of an administrative reform considered necessars on general grounds than a regrading of the rate, but it is again a reform which will benefit the with the view sometimes expressed that India with the view sometimes expressed that India pice embosed envelope which was imposed in of two and a half laklis from this change

Telegrams—The last change which we propose is as regards Telegrams Instead of inving, as at present, a minimum charge for ordinary telegrams of 12 annes with a surcharge of one anna for a message of 12 words, we propose to introduce a minimum charge for a telegram of 8 words of 9 annas, while that for an express telegram of the same length will be one rupee and two annas For each additional word in the two classes of telegrams the additional charge will be one and two annas respectively We estimate a loss during the first lear of 3 lakes from this change, but here also, as in the case of the postal rates, we hope that in the second year this loss will disappear, while without making thus change we consider that there is a prospect of a continuous decline in telegraph receipts

The 1935-36 Budget—This Budget is expected to show a surplus of Rs 150 laklus available for tax reduction. Before dealing available for tax reduction Before dealing with this issue the Finance Member said that he must mention three items -

Additional Import Duty on Salt — The first of these is the additional import duty on sait Personally I am very doubtful whether this duty can ever achieve the purpose for which it was designed I have moreover a good deal of sympathy with the views which have in the past been expressed by Hon'ble Members from Bengal that an impost which has the belong the producers of Aden at erect of helping the producers of Aden at the expense of the cosumers of Bengal is fundamentally unfair. In any case the duty will require consideration in view of the impending separation of Aden and Burms Taking all these things into consideration I was disposed Takıng

This change introduces grown up and I shall therefore propose to the House that the duty shall be extended for one vear, without, prejudice to any action which Government may see fit to take at the end of should accept its decision Incidentally we do not propose to make any change in the arrangements for the distribution of the proceeds of the duty,

should be encouraged to build up her boards (c) Thirdle, as regards Postulrates, we pro- There is no doubt at the present level the anty pose a small change in a contrary direction, is encouraging smuggling, there is no doubt namely, that the initial charge on inland book that the smuggling is extremely difficult to prevent and there is no doubt that the honest of the metal It is simply a matter of business namely, that the initial charge on mland book that the smurghing is extremely difficult to packets not exceeding 5 tolas in weight should prevent and there is no doubt that the honest he raised from 6 to 9 mes. The book packet itader is being injured by the illient trade method of transmission is undoubtedly being which is being carried on. At the lower level abused, and a change is urgently necessary to which we now propose smurghing should become stop the diversion, with consequent loss of unprofitable and the honest trade will come into revenue, that is occurring of post card traffic to his own. I propose to assume that we shall the book packet category. We estimate a gain of get the same yield from the 2 annas as would a little over 5 lakhs in revenue from this change. is, I think, fully justified by the circumstances in which the reduction is taken place. The reduction will take place immediately by notification

> Export Duty on Skins -The third change of a minor order is the abolition of the export duty on raw skins. During the eight months ending 30th November 1934—the export trade in raw shins declined in volume, as compared with the corresponding period of the previous year, from 13,133 tons to 8,938 tons and in value from Rs 2,24 lakhs to Rs, 1,19 lakhs We all believe of course that the most necessary factorin India's economic recovery is revival of her export trade Many of us feel angry and humilitated at our inability to suggest any positive action designed to promote that end apart from international action of a kind which is not at present likely to be taken, namely, a general agreement. to reduce tariffs and quotas But here is one case, though unfortunately only a small one, where some action is possible within the bounds of our available resources and I think that it should be taken. The change will take place as from the 1st April and the loss of revenue will be Rs. 8 lakks

Reduction of Taxes on Income —We still have Rs 1,42 lakes left to dispose of and I propose to do this in accordance with the pledge of my predecessor in which he said "Relief must come first in restoring the emergence cuts in pay and secondly in taking off the surcharge on the income-tax now to be imposed "

Although the tax on smaller incomes was not strictly a surcharge, it does, I think, come within the spirit of the pledge and I propose to to think that the duty ought to be aboushed deal with it and the surcharges on income-fax and at once but that would perhaps have been a super-tax together. The removal of the surcharglittle harsh to the vested interests which have ges altogether would cost Rs 3,34 lakhs a year

while the removal of the tax on incomes between a Rs 1,000 and Rs 2,000 would cost a further Rs 75 lakhs Clearly with a surplus of Rs 1,42 lakhs only we cannot remove the whole of the two surcharges and the quasi-surcharge but what we can do is to reduce them by one-third and this is what I in fact propose The cost will be Rs is what I in fact propose 1,36 lakhs leaving us with a putely nominal surplus of Rs 6 lakhs"

Treatment of 1934-35 Surplus -The surplus for 1984-85 turn out to be much larger than originally budgeted, totalling Rs 380 lakhs. Of this sum the Finance Member said

"We consider that the needs of the rural areas should have the first claim on this and we have decided to set aside a sum of Rs 1,00 lakks for distribution to the provinces to be spent on schemes for the economic development and improvement of such areas

Schemes have been examined and worked out but unfortunately many of them are still merely paper schemes, for even before the financial stringency of recent years some Local Governments could only devote very inadequate funds to those purposes and in the recent years of crisis and retrenchment it has been impossible for any Local Government to find money for new projects however likely they were to contribute to the prosperity of the province

I have used the expression economic development and improvement of rural areas and I have indicated that I use that expression in a wide sense to cover any measure which will conduce to the amelioration of the conditions of the cultivators and rural classes One such measure is the Co-operative Movement and we have for the last 7 or 8 months had an expert on duty under the Central Government to examine how the movement stand. Mr Darling who has acquired great experience of the movement in the Punjab has been touring round the provinces discussing the question with Local Governments and Provincial Registrars. We propose to earmark a sum of Rs 10 to 15 lakhs out of the crore which I have mentioned and this, we liope, will enable governments to develop the movement on sound financial foundations Details of the measures and the conditions on which the grants will be given will be settled after we have considered Mr Darling's Report

As regards the remaining Rs 85 to Rs 90 lakhs I do not propose at present to define very closely the terms on which it will be distributed to the Provinces or the purposes for which it will be used I may, however, say that we shall pro-bably adopt the basis of rural repulation for distribution and we shall certainly impose the two following conditions -

- (1) that the grant should be spent on schemes approved by the Government of India which will improve the economic position of the people, and
- (2) that it will be devoted only to schemes which the Local Government would not otherwise have been able to undertake in the immediate future

Fund. There is obviously great scope for expenditure on road development, and I am very glad to be in a position to supplement the somewhat eviguous resources of the Road Development Fund reserve, which was designed. as Mon'ble Members are aware for the purpose of making grants towards works of special, importance or to specially necessitous parts of India The Government have drawn up a programme for the expenditure of the additional sum now available and in this prime consideration is being given to the needs of the Province of Assam, which seems to me to be about the most necessitous of all the provinces.

North-West Frontier Roads -A further sum of Rs 25 lakhs we propose to set aside for schemes of development in the North West Frontier Province Most of this will be spent on the construction of roads in the tribal area and the remainder will be devoted to schemes of economic development in that area, I wish to make it clear that we have no intention of implementing this policy by force or without the consent of the tribes in whose territory the roads will be constructed

A petition has álready been received from the Airklisasking that a road may be constructed through a small area in Tirah and it is hoped that this development may lead to a faller recognition not only by this important tribe but also by others of how their true interests are served by improvement of their communications with British India

It is considered that from the point of view of Government this expenditure, which probably be spread over several years, is fully justified both on financial and political grounds. As Frontiertribes and Government have not always been peaceful and very large sums have been expanded from time to time upon military operations of a punitive and wholly unproductive We hope that by improving communica tions and by assisting the tribes to become economically self-supporting we shall not only avoid the necessity for such operations in future but shall transform in course of time a potential danger into a source of strength to India

item of special Broadcasting —The last expenditure which I have to mention in this connection is a provision of Rs 20 lakhs or the development of Brondcasting As has already been announced, it is proposed shortly to construct a large transmitting station in Delhi, and we hope later to undertake the construction The existing of a similar new station at Madras stations at Calcutta and Bombay are also in urgent need of improvement and extension Broadcasting is of course an immensely important factor in the intellectual and cultural development of a country and India camot afford to fall too far behind in this matter.

After these special grants have been made there should remain a balance of Rs 204 lakes A large part of this sum I propose to put said for two schemes which it was provisionally decided to finance from capital These are the decided to finance from capital These are the capital was a said of the capital these are the capital these are the capital these are the capital these are the capital these are the capital these are the capital these are the capital these capi Roads—We also propose to make a special contribution of Rs 40 lakhs to the Government of India's reserve in the Road Development Pusa Institute to Delhi which will cost about Re 36 lakks. I was not myself very happy Re 36 lakks I was not invest very happy Opium—Our estimate under this head is about the decision to charge to capital these Re 61 lakks as compared with Re 71 lakks for two schemes, which are certainly not in any the current financial year strict sense of the word remunerative And now that we have an accrued revenue surplus the seems to me sound policy to use part of it for Members are aware this source of income will these purposes and to avoid the creation of what might have become an awkward precedent calendar year in accordance with the policy. The remainder of the surplus amounting to which was announced some years ago by the Rs 75 laklis will now go as an additional allot-flowers are aware this source of income will practically cause at the end of the process. Calendar year in accordance with the policy. The remainder of the surplus amounting to which was announced some years ago by the ment for the reduction of debt and this concludes recover only the cost of opium sold for continuous and the surplus and the surplus are calendar year. the disposal of the sums which we expect to sumption in India have in hand on the 31st March next."

Revenue in 1935-36 -Concerning the revenue for 1935-36 the Pinance Member said .

"The total revenue, excluding Railways, may be at Rs 00 19 lakhs or Rs SI lakhs less than than the revised estimate for the current year

Customs, etc -Here I estimate for Rs 51 92 lakhs altogether or an increase of Re 75 likhs over the revised figures for the current year The main variations are a decline of Rs 2 crores on the import duty on sugar combined with increases of R= 35 lakhs on the sugar excise of R= 05 lakhs on the match excise and of R= 43 lakhs on kerosene and Petrol It is of course a matter of great difficulty to frame an accurate estimate of customs, etc., revenue at a time when there are so many uncertain factors at work. This uncertainty applies in a particular measure to the sugar duties. As I have already stated, our estimates for the current year have been revised to show an increase of Rs 1,70 lakhs in the import duty and a decline of Rs 32 lakhs in excise—the original figures being Rs 2 05 and 1,47 lakhs respectively, and the revised Rs 3,75 and 1,15 lakhs We cannot, the revised Rs 3,75 and 1,15 lakhs we cannot, however, anticipate that the revenue from the import duty will remain at so high a figure in 1935-39 and the increased revenue to be expected from the excise duty will by no means com-pensate for this inevitable reduction

During the period when Indian factories were not working at their full strength, imports have been substantial, but when Indian production reaches its full level, imports of foreign sugai for ordinary consumption will almost disappear, and there will only be certain substantial of the floor very terms of sugar while imports of the finer varieties of sugar process may not, however, be completed during 1935-36 and the best forecast we can make is to assume an import levenue of Rs 1.75 lakhs and an excise yield of Rs 1,50 lakhs. The increase in petrol and kerosene is due to normal growth and that in the match excise merely represents a full instead of a part year's yield of the duty

Taxes on Income —During the current year there has been an undoubted improvement in the financial position of some of the more important industries, but this improvement will only be partially reflected in our Income-tax returns for 1985-36 I therefore estimate for an improvement of no more than Rs 51 lakhs and of this Rs 16 lakhs is due to the additional tax recovered from Government servants on account of the restoled pay-cut. The actual secured to some extent by emergency measures figures are Rs 17,25 Likhs for the current of a temporary character and that the figure of year and Rs 17,76 for 1935-36

Rs 44,88 crores could not be regarded as

This is based on the assumption that only 257 chests of opium will be exported during 1935-36 As Hon'ble

Interest —This shows a very large reduction amounting of Rs 1,29 lakhs which is of course due to the transfer of the currency function and, therefore the reserves, of the Government of India to the Reserve Bank It is true that as against this we shall get the surplus profits of the Bank but in the first year instead of getting a full year's interest on the assets in our various reserves and balances we shall only get a part year's dividend from the profits of the Bank We have included Rs 50 lakhs on this account under the head "Currency" but the receipts here still show a drop of Rs 11 lakhs owing to the lower rates prevailing for short term money"

1935-36 Expenditure —" Expenditure as a whole, again excluding Railways, stands at Rs 88,60 lakhs showing an increase of Rs 96 laklis which is of course almost entirely due to the restoration of the pay cut

The cost of restoration will be Rs. 55 lakhs the Civil Departments, excluding the Railways, but including the Posts and Telegraphs Department, and Rs 58 lakhs for the Army, a total of Rs 1,08 lakhs, but there is, as I have said, a set off against this in the form of extra income-tax to the extent of Rs 16 lakhs

Apart from the pay cut, there are only minor increases, most of them on new services, eg, the marketing scheme, grants to the handloom and sericultural industries, the new Dairy Institute and the Institute of Industrial Research There is also a small increase on Defence and a deficit on Posts and Telegraphs, which is however, more than explained by the abolition of the pay cut

Defence —The Defence Budget shows an increase, leaving out of account the pay cut, of Rs 7 lakis over the original stimate for this year but the partial restoration by His Majesty's Government of the pay cuts of British soldiers. which has necessarily to be applied to British soldiers on the Indian establishment, accounts for Rs 5 lakhs of this The purely normal increase of Rs 2 lakhs which remains conceals however a considerably increased provision for necessary services and re-equipment which had to be postponed during the financial emergency.

In his budget speech last year my predecessor again communicated to the House a warning previously given that the large reduction in Defence expenditure in recent years had been

exponditure. The confingency then forescent has become a fact and new or rather postponed to be provided for This sun has been found as to Rs 20 lakhs by closer estimating for grains and other foodstuffs and as to the remainder by economies in other directions

My predecessor also stated that His Locollene v Commander in-Chief had undertaken that he would not relax his search for further economes and I think it will be agreed that the figures I have given demonstrate that this undertaking has been amply fulfilled.

Honourable Members will remember that I said we now expected a surplus on the Posts and Telegraphs accounts or 1931-35 amounting to Rs. 14 lakhs but that this result, was only achieved in consequence of a raid of about Rs. 27 lakhs on the Depreciation Fund. At the time of this rild my preference explained that thus could not be repeated in toto but that the whole question of the amount of the annual contribution to the Fund was under review erores.

The final results of this review are not yet. Allowing for a remittance of £26 million available but it is clear that the amount to we anticipate that we could meet all these be provided need not be so high is under the liabilities without rising more than Rs. 25 old rules by something like Rs. 10 lakes. There cross by fresh borrowing, but of course the is here therefore a deterioration in the estimates amount, time and manner of our borrowing is here therefore a deterioration in the estimate-for 1935-36 as compared with 1931-36 and it is one of Rs 19 lakhs and not one of Rs 27 lakha When we add to this the cost of restoring the pay cut for the Posts and Telegraphs Department viz , Rs. 27 lakhs, we get an imital disadvantage of its 46 lakes to be in ide up. We are however it bevern annuments designed to reduce the estimating for a defeit not of its. 22 lakes scale of taxation proposed by the Haares but of its 13 lakes which means that comparing Member were made, and the House accepted like with like we reckon a net improvement of three ancedments emanating from the Congress.

1933-34 and those for the current fin includes only Rs. 3 crores for this purpose included only Rs. 3 crores for this purpose Rs. 50 lakes), and to lower postal rates by It is of course a matter of common knowledge providing for a return to the half-anna postcard that 60 per cent of the Government of India and the one anna letter (which would have cost left from Rs. 2,000 a year from physical providing for a return to the half-anna postcard and the one anna letter (which would have cost dobt is attributable to the Railways and it seems to me that it would be imposing too heavy a burden on the general Budget to revert to the Suking Fund arrangements in force prior to 1934-35 before the Railways have resumed the practice of making a contribution to the General Revenues I therefore accept as reasonable for the time being the provision of Rs 3 crores now prevailing but I should like to make it clear that, in my view, an increased provision for debt reduction ought to be a first charge on any contribution from the Railways in the future"

Borrowing -On this subject the Finance Momher said

of 31 per cent loan 1947-50 at 98/38 per cent and the amount subscribed was approximately Rs 25,13 lakhs A few months later owing addition of the Viceroy's Signature, it became to the continued improvement in our credit law. "We have issued two loans in India during the current year The first was a re-issue of 31 per cent loan 1947-50 at 98/38 per cent

representing a new permanent level of Defence (we were able to issue a raper loan at a nominal rate of 3 per cent for the first time since 1896 The 3 per cent, bonds 1911 were issued at 99 per cent and the amount subscribed was its, 10,67 lakhs. As a result of these new lones we have been able to repay 114 10,18 lalls of 4 per cent loan 1931-37 and Rs. 12,91 lakes of 43 per cent bonds 1931. Both of the new issues stand well above their original price.

Next year we shall have to provide for the represent of R= 16 crores of 63 per cent Tremury Bonds, 1935, and R= 11,4 crores of 5 per cent Bonds 1935 We have also the option of reprying 111,0 millions of 6 per cent sterling Bonds 1935-37 and 131 millions of Last Indian Bailway 11 per cent debenture stock 1935-55. The total amount of loans which we can repay or convert is thus approximately By 19 crores. In addition to this we are, as I have just sold, providing for the repryment of the Bombas Development Loan, 1935, and we expect to reduce the total amount of tremus bills out trading by a further Rs 3 CTOTE 5

will depend entirely on market conditions during the seir.

Decision -Inc I inance Bill was subjected to a protracted debate in the Lagislative Assemb-Rs 10 lakks

Reduction of Debt—There is only our and a half crores of rupees in the Budget, other item which I wish specifically to mention at this stage and that is the provision for the reduction and avoidance of debt. As Hon'ble Members are aware, our revised estimates for incomes of less than Rs 2,000 a year from payand the one anna lotter (which would have cost Rs 76 lakhs)

> On April 5, His Lacellency the Viceroy returned the Junance Bill to the Assembly with the recommendation that it should be passed in the original form. This the Assembly declined to do by rejecting the Finance Member's motion for the restoration of the salt duty to Re. 1-4, by 64 vater 4. by 64 votes to 11.

> The Finance Bill was thereupon cortified by the President and sent to the Council of State in Several amendments to it were to have been moved by members of that house, but when it was learned that the vicercy had no power to accept amendments made by the Council of State in the cartifed Bill, the amendments were not nioved although members of the Programmer Texts and amount certain

This scheme is subjected by the Commission to a detailed examination, and rejected on grounds "hich are convincing The main grounds on hich are convincing The main of the smount and time of the gold demand are uncertain, and the action by India of the amount and the cost on the subject of the mornial absorption for the arts, hoards, etc., nould powerfully react on the supplies of credit, the nord The reaction on the silver market the nord The reaction on the silver market the nord The reaction on the silver market the nord The reaction on the silver market the nord The reaction on the silver market then the detainments of the rupee and realised then the silver hourds of the rupee and realised the nore market, with decase in more marked, with severely prejudicas clicates on the silver hourds of the rupee and realised chart for a silver hourds of the india of India does a farge hourds of the India.

The evel more as place the required credits of india and the cost is placed to release the required credits of the orbiding silver with the exchanges and realised the results of the india of the angelone of the india of the action of the india of the cost is placed to the india of the action of the indian of

ties in London and Now York established beyond to doubt that it is not in the interests of India doubt that it is not in the interests of India to precipitate any currency reform that would relocate the close of desirable that colorm might be in itself hise, that whilst London, working in every nerve to supply India with the timds she might require for her own development, it could hardly be expected to provide credits for a scheme which would upset the gold and the Commession - nere not able to endorse Eir. Basil Blackett's scheme, there is no doubt that the your recommendations of a policy which moniacs a cure for India and remains the courtency bils is therefore in the interest the policy which moniacs a cure for India out a policy which promises a cure for india and its proposed in the courte of the

A Gold Bullion Standard —The currency system recommended by the Commession as a foold bullion standard and they propose that an obligation standard and obligation standard imposed by statute on the commence to a finite the standard with reference to a finite the standard with reference to a finite the currency and the currency in the casence of this proposal of not less than 400 fine ources, no limitation being imposed as to/the purpose for which the gold as required a to/the purpose for which the finite the currency of the times of this proposal note and the sulver rupee, and that tile entrency in terms of curculation in by making the currency directly convertible into gold for all purposes, but that gold should note curculate as money it must not curculate as money it must not curculate as money it must not curculate the currency at mist not of curculate as money it must not curculate as money it must not curculate as money it must not curculate as money it must not of curculate as money of circulate over in the standard, the Compressing adult from the standard, the Compression were powerfully influenced by two mission were powerfully influenced by two instandard were powerfully influenced by two increases in the curculate as a segmentary in the curculate the currenced by two increases in the curculate as a segmentary to the curculate the curculate provided exchange standard, the Compression were powerfully influenced by two increases in the curculate the provided exchange standard, the Compression were powerfully influenced by two increases in the curculate the curculate in the curculation were powerfully influenced by two increases in the curculate the curculate the curculate and the curculate the curculate in the curculate in the curculate in the curculate in the curculate in the curculate in the curculate in the curculate in the curculate in the curculate in the curculate in the curculate in the curculate in the curculate in the curculate in the curculate in the curculate in the curculate in the curculate

convertibility of the Note Isade Wisely, it took the former attempt a file of Council Drafts followed the price of silver. The effect of the former attempts of the price of Council of this nould have been transitory, but for the attempt in 1920, on the advice of the Babing. On the attempt in 1920, on the advice of the Babins ton anth Committee, to stabilise the rupes at a new ratio of two shillings gold when all and rupes gold prices nere crashing. It is easy to be gold prices nere crashing. It the Government in the followed silver the formed to don't that the rupes and filer the round to don't that the rupes of silver the result on the relations However, this was inevitable and followed silver the relations Homewer, 1920, and the two shilling rupes has since been a legal done The rain thous administrative action, action Left free from administrative action, and the two shilling rupes has since been a legal stering and difference of gold in 1920, has atering and shilling gold in 1920. Incomment the indian standard has been in the neighbourbord of one shilling rupes fold in 1920. Incomed to one shilling and shrees gold for the collect in the ruper of the rupes of the rupes of the rupes of the rupes of the rupes of the rupes of the rupes of the rupes of the rupes of the rupes of the rupes of the rupes of the rupes of the report, "The stability of the rupes of the rupes of the report, ind those are rupes in mpiled from the acts of the Government in the rupe to be northed the rupes of the currency, and those acts to any central.

The responsibility remitted to the Commission nas not therefore the mere stabilisation of the rupes, but the estabilishment of a standard which, would command reasoned confidence in India, to flub the rupes to that standard, and to provide for its statiatory control, automatic working and stability, to bring the control of currency and of credit under a single suthorty and to free the Indian currency and expansive and to free the Indian currency and exchange system from the dominance of the silver change system from the dominance of the silver market In short, it was to estabilish the rule of law in place of the practice of administrative discretion.

Scheme for Gold Currency—In the course of ther inquires in Indea the Commission for the course of their inquires in Indea the Commission has the conforment of a gold outlier the gold currency which standard supported by the gold currency which a large body of Indian opinion has insistently officials of the Finance Department, but it is connected to the Finance Department, but it is known to be the work of the Finance Member, shown to be the work of the Finance Alember, shown to be the work of the Finance Alember, shown to be the work of the Finance Alember, shown to be the work of the Finance allember, shown to be the work of the Finance allember, shown to be the work of the Finance allember, shown to be the work of the Finance allember, shown to be the work of the Finance allember.

The essential features of this Scheme were the undertaking of a statutory obligation by Government to buy and sell gold bullion in 400 os bars, as soon as sufficient gold was satisfied to put a gold coin in circulation, steer a period tentatively fixed at five years to indestake to give gold coin in exchange for indestake to give gold coin in exchange for notes and rupees, and after a further period, also tentatively fixed at five years, make the silve tupees legal tender only for sums up to silver rupee legal tender only for sums up to silver rupee legal tender only for sums up to silver rupee legal tender only for sums up to silver rupee legal tender only for sums up to silver rupee legal tender only for sums up to silver rupee legal tender only for sums up to silver rupee legal tender only for sums up to silver rupee legal tender only for sums up to

are of opinion that during this period no favourable opportunity of forthying the gold holding in the the later, o should be allowed to escape. ralsed to 20 per cent, as soon as possible, and to 25 per cent in ten years. Generally, they now stands ut about 12 8 per cent should be proportions and composition of the combined like completed by proportions and composition of the combined likeserve should be fixed by statute; that gold and gold cost the whole, with 50 to 60 per cent as the ideal; and that the holding of gold, which may stand at a hour 18 g or c as the that it is not the which how stands at about 18 g or c as the choice he Their further proposals are that the emegicant of little out out trill guille munorit reserve This invisible tine of demarcation will disappear if the Commission's proposal are diopted The Commission are justified in TOSOT & C river from india la the gold in the paper currency of descence in the event of a denama for remitevernal value of the rupe In practice their diverge is the packing for the Aoce leave. The Cold Standard Reserve, accumulated from the prolife on colning, is designed to maintain the prolife on colning, is designed to maintain the prolife on colning, is designed to maintain the prolife of the process that the colling is the colling. In cheory the two reserves tulis entiring firence Currency different Treasury tillis and other sterling securities. delibil al ban blod al huseral 000,000,013 at The Gold Standard Regerve amounts at present

The proposal to bring the combined Reserve under statutory control is wise; an arguable case could be made out for the thesis that the turnency difficulties of India have arisen in the main rot to invest the oilletal acceptance dovernment not to invest the oilletal acceptance of the browly Itoport with legislative authority. The etrengthening of they gold reserves is in contra accord with Indian needs.

The Ratio.—The majority of the Commission, 51r fursional and a factories being the sion, 51r fursional and a factories the rupe only dissentient, recommend that the rupe be stabilized in relation to gold at a rate corresponding to an exhibit some the rupe of the rupe of concentrated; it is a proversy in India will be concentrated; it is insterney of the rule our memories of the rupes aloud be permanently stabilized at one similing and fourpence, the Scottery of State for India accepted their includes and four memories in the Scottery of State for India accepted their rupes was substantially stabilized at the rupes aloud be permatured secretary of State for India accepted their rupes was substantially stand course with a substantially stand at this point rupes was substantially stand at this point rupes was substantially stand at this point rupes. The

One principle, 1917,
One principle advanced in Sir Indiba Dalal's fine the prophetic minority report in 1919, that the jetyli standard of money payments should be jetyli standard of money payments should be the legislative Act, and unuily is, regarded as jess open to repeal or modification timn any other legislative Act, will command general acceptance. But when any other legislative the word flowers and of the major have avoided this measure by larger borrowings in India and encountry white no one in toneth with Indian conditions of the flow billing the trate of exchange are in declaring the trate of evenance of the raising the rate of evenance of the raising the rate of evenance of the drawing in the flow principle, which during the war indeclaring the belief that the rate of evenance of electric first that the rate of exchange was raised to meet the rate in silver, but when it was not lowered the rase in silver, but when it was not lowered the rate in silver, but when it was not lowered the rate in silver, but when it was not lowered the rate in silver, but when it was not lowered silver in the rate of exchange was raised to meet the rate of a stending the rate in silver, but when it was not lowered and silver field; the stending to silver and silver fill, the stending to silver and silver.

Indian system from the price of silver rising above the incling pioint of the impre and the desirability of cetabilishing confidence by giving the country not only a real, but compensionally like fourth including and gold visible link between the confidence by giving visible link between the confidence by giving a real file.

ging reasoning is eminently sound, and the science in its broad outlines should commend science in its broad outlines should commend the universitäting support not only of India but of all intersted in Indian trade India will have nething to do with any evenance standard, its experience is up to the two paintill Proposals to that end would be rejected by the standard and prolong the currency controver. I seek it is desired to close The gold buildon standard and a sentancer is the control of the sound build nether a sentancer if induced and the control of the sourching to the section of the sourching the does not do the set indig. I have the dead of the control of the sourching the door open. Moon to the set indig. I standard and a gold currency are inmediately practicable. The most tapid progress thereto which is full of uncertainties and risks the proceed and a gold currency are inmediately when the gold reserved to the which is full of uncertainties and risks schemy which is full of uncertainties and risks the processis to the could be suffered and a gold currency are stringinened to the receipt tree to decide, through it in the leading the cities of the could be suffered by tree to decide, through in the regislature, where a gold currency is worth the cypense.

We must, however, tace the obligation which a yold pullion standard imposes on the converse the converse withouthy in India, indicat the Converse withouthy in India, indicat the Converse obligation is to convert the currency, not metrify and it is an obligation that is not, as formerly, and it is an obligation that is not, as formerly, and it is an obligation that is not, as formerly, and it is an obligation that is not other country that is been and chemicalled, but about about and undertaken by evertheless... it is insported an effective with standard and we dovernment of India are adequate to enable the formerly suit the measure. In the form of reserves at the disposal of the Government of India are adequate to enable the formerly authority andertake the time, which we specify to undertake the time, which we specify if it is important.

The reserves held for the purpose of maintaining the value of the tole in currency its twofold—the preserve "Their constitution on Apill So, 1928 (the date taken by the Commission), was as follows —

Paper Currency Itererve.

## The Communal Award.

The decision of the British Government in fegard to the british Government in fegard to the representation of the various communities in British India in the Provincial Legislatures, on which the communities themselves were unable to agree, was published in and comprehensive in the and comprehensive in the proportions and comprehensive in the various communities in the Frontinces The decision was not given on strictly arithmetical lines, thus the British and Decision of the various compulation for 175 in the British on a population hears. The Fungle of distribution avoided the team Hindu. It is a count to a first heading "General", place was taken by the heading "General", froy avoid on a population hears. The seating of distribution avoided the team of distribution and to the most and findum of a functions. The seats were distributed as function to alusins, Sikhs, Indian Christisms and Findus (or strains conscituences and extration and Indians. But Indian Christisms, 20, Bikhs, 35, Musim, 489, Indian Christisms, 21, Angio-Indians, 12, Indian Christisms, 21, Angio-Indians, 12, Indians, 25, Commerce and Indians, 12, Indians, 25, Commerce and Indians, 12, Indians, 25, Indians, 28, and Labour, 28, 101 With regard the Depressed Chasses, 15, 160 Depressed Chasses, 15, 181 Depressed Chasses, 15, 181 Depressed Chasses, 15, 181 Depressed Chasses, 15, 181 Depressed Chasses, 15, 181 Depressed Chasses, 15, 181 Depressed Chasses, 15, 181 Depressed Chasses, 15, 181 Depressed Chasses, 15, 181 Depressed Chasses, 15, 181 Depressed Chasses, 15, 181 Depressed Chasses, 15, 181 Depressed Chasses, 15, 181 Depressed Chasses, 15, 181 Depressed Chasses, 15, 181 Depressed Chasses, 15, 181 Depressed Chasses, 15, 181 Depressed Chasses, 15, 181 Depressed Chasses, 15, 181 Depressed Chasses, 161 Depressed Chasses, 161 Depressed Chasses, 161 Depressed Chasses, 161 Depressed Chasses, 161 Depressed Chasses, 161 Depressed Chasses, 161 Depressed Chasses, 161 Depressed Chasses, 162 Depressed Chasses, 163 Depressed Chasses, 163 Depressed Chasses,

With regard to the Depressed Chasses, it was explained that they would vote in the general constituences, but in order to ensure adequate constituences, but in order to ensure acteurs also the incompleted that this arrange-representation to them seembers of these classes allotted. It was contemplated that this arrangement, which gave the members of these classes to women yourse, should be limited to 80 years. As to women to wo votes, should be limited to 80 years as to women to wo work to the decision to limit the electrorate for each special woman's seek to voters from one each special woman's seek to voters from one

Accompanying the award was an explanatory statement by the Prime Minister in the course of which he observed as follows,

"Our duty was plan As the shilure of the placed an almost naturalization obstacle in placed an almost insurmountable obstacle in the way of any constitutional development, it was incumbent upon the Government to take action in accordance, therefore, with the statement of the Round Table Conference in response to and in accordance with the statement approved by the British Parliament, the Government and in accordance with the statement approved by the British Parliament, in due course, to lay before Parliament in due course, to lay before Parliament un due course, to lay before Parliament unicae, in the meanwhile the communities thement unicae, to lay before Parliament unicae, in the meanwhile the communities thement unicae, while the communities thement unicae, which meanwhile the communities thement unicae.

Engiand, and others may be was appointed the proposed Bill becomes law the communications are confirmed aloos in the earlier proceedings loned the Deleve between the part of the Conference was helpful. Though the work of the Conference was helpful. Though the was perhaps more anxious to justify Congress, and to maintain its right to speak for lides. The Godding it easy for the Princes and States to make the principle of tederation, and the sources of the Governors' Provances or in respect to make the principle of tederation, and the source of the Governors' Provances or in respect to make the principle of tederation, and the source of the Governors' Provances or in respect to make the principle of tederation, and the control of the whole of British India that is generally butlon was less helpful, Specially was this the control of the whole of British India that is generally butlon was less helpful, Specially was this the control of the whole of british india that is generally care in respect to make the principle.

Dominion status for that responsible government. With the assurance of the participation of the Frinces and States, bringing a powerful element of stability into the governing machine, Lord Reading, speaking for the Liberals, accepted the curcial proposition of a responsible government at the centre. Later, the spokesmen for the Conservative Party took up the same position of a responsible government at the centre. Later, the spokesmen for the Conservative Party took up the same position, on this guiding principle substantial progress named in sketching the outline of a federal constitution True, the Minorities of a federal minorities in the indian population, especially that is to say the adequate profection of the and Mosiem acceptance of responsibility at the centre was conditional on the continuous fibs centre was so satisfactory before the Conference gress are so satisfactory before the Conference spansible and Marshatter, as a largesty's Government the Prima Minister. His Malesty's Government the Prima Minister. Sir, Ramsay MacDonald, was in a position to make the following announcement.

"The view of His Alajesty's Government is that responsibility for the Government of India should be placed upon Legislatures, Central and Provincial, with such provisions as may be necessary to guarantee, during a period of transition, the observance of certain obligations and to meet other special circumstances, and also with such guarantees as are required by minorities to protect their political liberties and rights

"In such statutory sateguards as may be made for meeting the needs of the transitional period, it will be a primary concern of His powers are so framed and evercised as not to prejudice the advance of India through the new constitution to full responsibility for her own constitution to full responsibility for her own discount to full responsibility for her own constitution to full responsibility for her own discount to full responsibility for her own constitution to full responsibility for her own properties."

Participation of Congress—But representative as it was in all other respects, the first seasion of the Congress chief and it was in all other respects, the first seasion of the Congress embraced no representative of The Indian Rational Congress. For various reasons that stood aloof During the various reasons that stood aloof first seasion, and the convenient of the second, negotiations and the convenient of the second, negotiations are seasion, and the constitution. These suspending the Civil Disobedience Movement as a suspending the civil Disobedience Movement and Candid. The confidence on with mynk was colled "The Gandh-Irwin Pact", which embodied a settlement covering the whole field in dispute, and discussions and to suspend divil disobedience. After many and to suspend divil disobedience, After many and to suspend divil disobedience, After many as to representative in the Bond Table discussions in earlier proceedings jound the Delector in the Conference was helpful Though to the work of the Conference was helpful Though to manitain its right to speak for India, and the was perhaps more arxious to justify Congress, and to manitain its right to speak for India, and the was perhaps more arxious to justify Congress, and to manitain its right to speak for India, and the saccepted the principle of federation, and the saccepted the principle of sederation, and the saccepted the principle of sederation, and the saccepted the principle of sederation, and the cases of the princes and states.

Parliament

The Committee accepted the principle of provinced the proposity provinces dyarchy should be abolished and almisters made generally responsible over the whole provincial field in the special circumstances of Indus, howover, it was likely madeances flats this principle of excenting appropriate that this principle of exceeding independence should be remforced in the Constitution by the conferment of special powers and responsibilities on the Governor as the land of the provincial excentive.

The following is a summary of the main recommendations of the Committee —

The Committee empinesised that Prorincial Autonomy required a readjustment at the Centre To create autonomous units without any contrading adapteation of the Committee's opnous Ucestalature would in the Committee's opnous the Civil Centraliush forces of this pay to the powerful centraliush forces of Provincial Autonomy without any attempt of Provincial Autonomy without any attempt to counterest them and ensure the confinmation unity of India

Having accepted the broad conclusions of Froymers Automony and an All-India Federation, the Committee, while recognising that Froyincial Automony must precede central change, stated that the same Act should by down a Constitution both for the Centra and for the Constitution both for the Contral intention of Fritament should be made clear. Federation was not lot as a mere contungency of the full intention. The Committee advised that the interval between the Committee advised that the interval between the Federation should not be inaggration of the Federation should not be inaggration.

The Committee endorsed the general plan to the Yhute Paper for a statutory delimitation to the respective spheres of government the Central and Provincial Government. Accepting the Yhite Paper proposal, the Committee agreed that the allocation of the Committee agreed that the allocation of the sentine should be left to the control (kinital).

The White Paper plan to create new Provinces of bind and Orsan was approved, but it was recommended that the Orlean boundaries should be extended to include that portion of the Orlean Committee of 1932 together with the Orlean Committee of 1932 together with stands of the Daylean with a standard and Jalantia Jaliaha and sanally portion of the Parliamited and Jalantia Jaliaha and sanally sand sanally sand sanally sand sanally sand sanally sanally sand sanally

Federation."

The memorandum also domanded greater control over defence, finance and the services The signatories urged that the Army Counsellor should be a non-official Indianisation, the cost of defence should be substantially reduced and the Indian Army should not be employed outies including the control of the country except for Indian defence, side the country except for Indian defence.

On the subject of shandla safeguards they did not object to the appointment of an adviser to the object to the consultation in the day-to-drived period, to the Governor-General for a limited advise the consultation and that he should advise the Governor-General only when he consultated the should advise the shandlass or credit of the Federation to be in danger, Legislation in respect of currency, connege and the Reserve Bank must not be subject to the grevious consent of the Covernor-General

They demanded statutory recognition of India's freedom to regulate her facal policy without recedom to regulate her facal policy without reservations or qualiflications and, while about bitey had no objection to a general declaration about British subjects holding public offices or practising any profession or trade, they stoucly proposed any profession or trade, they stoucly imposed any profession or trade, they stoucly ruplects or the Dominions and Colonies which imposed disabilities on Indian subjects The proposal to continue the recruitment to the proposal to continue the recruitment to the objected to and the demand was put forth that objected to and the demand was put forth that the Central Services should be recruited by the Pedenii Government and the Provincial Services by the Provincial Services by the Provincial Services by the Provincial Services by the Provincial Services by the Provincial Services by the Provincial Services by the Provincial Services by the Provincial Services by the Provincial Services and the Provincial Services by the Provinc

olr. N. N. Joshi submitted a separate memoratum making suggestions for beatish mentance for workers and invalid and old age pensions and secking to improve the provisions and included and provisions tegicsentation

Early in the winter of 1934 the much deferred reports of the J. P. G. was published. It evoked a chorus of disapproval in India and was regarded by a wide secritor of public opinion as "more response, and the continuous and public opinion as "public opinion as "public opinion as "public opinion articles and piech for generations of india, that is, its instinctive acceptance by the main strength of the Government of India, that is, its instinctive acceptance by the main strength of the Committee. When the indian people, but the Committee of Indian people, but the Committee of the proper working of the main and the main appraisable government, to which in unitarity and an antennatio device which directed, was not an antennatio device which directed, was not an antennatio device which in threat india to main the proper working of india be maintened to specialization. The form the proper working of indian in the form and no america and in the little form and the antennation and the section of the proper would be anterested in a structural and an antennation of the section of the proper would be accertain in proportion as it represented in a structural and an antennation as it represents the form of the proper would be accertain in proportion as it represents the form of the proper would be accertain that a section of the proper would be accertain in proportion as it represents.

In dealing with the area of federal jurisdiction the Committee recommended that Aden should be transferred to the administrative control of His Majesty's Government on certain definite conditions not later than the date of Federation.

The Committee approved the proposals in the Vibite Paper for the Federal Executive, namely that the Governor-General with the assistance of not more than three Counsellors, should not more than three Counsellors, should be distributed affairs, Ecclesisation of British Bainchistan, and that in all other British Bainchistan, and that in all other of fliniteters chosen from the Federal Legislature, of the Brownia Governors except the division of the Provincial Governors except that tenponshilters, which would follow generally those sublities, which would follow generally those of the Provincial Governors except that the Bond of the Provincial Governors except that the Dorsillity for the financial Advisor in the manifest in difficulties apearal responsibility for the financial stability and credit of this special Advisor in the manifest responsibility for the flatter would be of the Federal Ministry The Committee made it clear that there would also of the Yellow flatter would be available to the Rederal Ministry The Committee made it clear that the Councilors had been available to the the Council of Ministers, but the delication between could not be Members of the Council of Ministers, but the delication between could not be Members of the Council of Ministers, but the delication between council or being and Alinisters should be encouraged.

The Committee accepted the White Paper proposals regarding the size of both Houses, proposals regarding the size of both Houses the ratio in each House between British India and States representatives, and the number of seates allotted to communities and special interests in the Lower House The Committee thought it important that the Muslim community ghought it important that the Muslim community ghought is made secured to it, as the White Paper proposed, one-third of all the British India seats

The Committee's proposals for the method of electing British Indian representatives to both Houses were In important departure from the Yhute Paper scheme The respective and disadvantages of methods of direct and indirect election to the Federa of direct and indirect election to ine Federa expressed themselves in twont of indirect election by the Provincial Lower Houses, the expressed themselves in thouser Houses, the election by the Provincial Lower Houses, the various communities world separately for their various communities world separately for their various representatives

They recommended that indirect election should be open to future review and express the hope that it after experience bad been obtained of the working of indirect election Indian, tained of the working of indirect election Indian, the Federal Legislature should by the openate percentage of Parliament according to procedure for which provision was made in the Legislature of indirect election based on a group system might provision based on a group system of indirect election based on a group system might provide the ultimate solution. It was recommended that in the case of the Provincial Upper House and in uncameral Legislatures the electing body should be the Provincial Upper House and in uncameral Provinces an electorial college should be the Provinces an electorial college should be the Provinces an electorial college should be the Provinces an electorial college should be the Provinces an electorial college should be the Provinces an electorial college should be the Provinces an electorial college should be the Provinces an electorial college should be the Provinces an electorial college should be the Provinces an electorial college should be the Provinces an electorial colleges and an analysis and an electorial provinces an electorial colleges and an analysis and an analysis and an electorial provinces an electorial colleges and an analysis and an analysis and an analysis and an electorial colleges and an analysis and an analy

It was recommended that in the case of bicameral Legislatures the electing body should be the Provinces in electoral Opper House and in unicameral Provinces an electoral college should be formed of persons electorate for Upper Houses in bing to an electorate for Upper Houses in biraper, election would be by single transferable remeral Provinces as under the White Paper, election would be by single transferable Committee preferred that the Should not be dissoluble. Its members should be elected to the the first should not be dissoluble. Its members about he elected for nine years and one-third replaced every third year.

AThe responsibility of Almisters over the provincial field involves the transfer to Almisters of a Provincial departments of a Provincial deverament, and under departments of a Brov melal deverament. In order however to avoid the interation of political pressure into questions affecting the political pressure into questions affecting the political discipline of the Police Force, the Committee consudered that the Governor's consent should be necessary to the amendment of Police Acts and certain Rules theremoser of Police Acts and certain Rules theremoser it was it-o recommended that there should be precisely protected that there should be precisely after the province and certain protection for secret intelligence reports special protection for secret intelligence reports

In view of the special problem that may be presented by terrorism, the Committee considered that there should be a power in the conversor phraselt to assume charge to such extent as he might judge requisite of all anti-ferrorist activities of Government in the conditions had materially improved by the time conditions had materially improved by the time conditions had materially improved by the time conditions had materially improved by the time conditions had materially improved by the time of the introduction of Provincial Autonomy

No change from the White Paper proposals n.2 suggested in the composition of the Provincial Legislatines, except that, on the ground that conditions are substantially the Lanne second Chambers note proposed for Madras and Bombay in addition to Bengal, the United Provinces and Bihar

The Committee considered that Provincial Upper Houses should not be hable to dissolution, but that one-third of the members should retire at fixed intervals

The Committee were definite in their opinion that commutate were definite in meyikable at the present time. They described as well-the present well-balanced the arrangement for the composition of Provincial Assemblies embodied in the Communal award, as amended by the Poona Pact.

Themselves regarding the States as an essential Tlemselves regarding the States as an essential element in an All-India Federation, the Committee accepted the principle proposed in the White Paper that the accession of a unfiltent proposal states should be a condition precedent proposal that the Federation should not come into evistence until the Edderation should not come stron of the Essential the total population of the States and entitled to not less than built of to the States than builted to not less than builted to not less than parties of the States and entitled to not less than aton of the States and entitled to not less than the States and entitled to soo states in the ball the States and entitled to soo states in the latest Upper Chamber had signified their feering to accede

The Committee agreed that tepresentatives of The States and the Bederal Legislature should be stated the States of the States composite the The The The Paper ratio of representation of the States and Estimate The Paper sear as a state of the States and Destrobed bestoched

The rights of paramountey over the Indian States at present exercised on behalf of the Crown by the Governor-General-in-Council clearly could not be exercised by any federal authority. The Committee fully agreed that antionity The Committee fully agreed that nouse the states relations ontside the federal sphere the States relations nouside advice to the Crown within this aphere, to tender advice to the Crown within this aphere, in the states and the States and States a

public purposes Government, to subjects of Indian States They thought also that there should be provision against evpropriation of property except for Constraint of the property of the property of the property of the property of the property of the profession of cashe, colour practising any trade, profession of cashe, colour reason only of his religion, descent, cashe, colour or place of birth, and it should be extended, as regards the holding of office under the federal corresponding to the profession of the professi

The Hight Hon'ble Srinivase Sestri visited the Might Hon'ble Scales, and Mew Sealand in the course of 1922 as the emisser of the Government of India to easiet them in giving effect to this resolution. The main object of his mission was to appeal to the Governments and public of Oanada and Aratralia fully to enfranchise qualified domiciled Indiana resident in Queensland and Western Australia hat in Queensland and Western Australia bad neither the provincial more successful in securing a more franchise. In Ganada are still excluded from the dominion as well as the provincial from the dominion as well as the provincial sympathetic atmosphere towards in securing a more sympathetic atmosphere towards in the existing electric in the existing electral laws.

The question of giving effect to the resolution of 1921 was raised by the Indian representatives at the Imperial Conference, 1923. Their proposal was as follows—

Let the Dominton Governments who have an Indian population, let His Bisjesty's Government in the areas under their direct conterol, such as Kenys, Ugands, Fili and other places where there are confer with a Committees to confer with a Committee which the Committees to confer with a Committee which the Committees to confer with a Committee which the Committees to confer with a Committee which the Committees to confer with a committee which the Stylore the avenues of how best and how soonest the principle of equality implicit in the 1921.

This proposal was involutely received by the Dominion Premiers, excluding General Smuts; and by the Secretary of State for the

composition of its own population by means of restriction on immigration from any of the other communities.

"(2) Britlah oitizens domiciled in any Bri tish country, including India, should be sdmitted into any other Britlah country to vielts, for the purpose of piecaure or commerce, including temporary residence for the purpose of education; such right shall not extend to a visit or temporary residence for isbour pur a visit or temporary residence for isbour pur a visit or temporary residence for isbour pur

BALASAHEB PANT
PRATINIDHI, the Ruler of
the Bombay University
and a treaty Chief. His
age is 66 and is married to
Shrimati Sabeb alias MaiSaneb from the Rode family
saheb from the Rode family
of Poons.

Heir-Apparent: Shri-Mant Bhacwantrao alias Bapusaheb is 15 years of are.

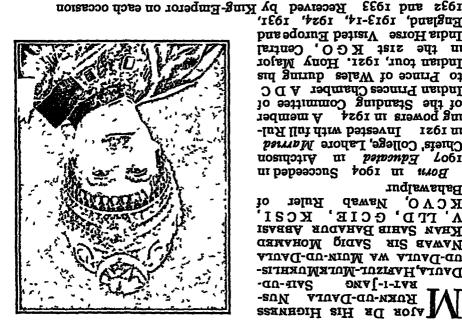

Shrimant Pantsaheb is alive to the rapid progress going on in the civilized world. A Legislative Assembly was established in the State in 1924. Its strength consists of notable feature of the Assembly is that it includes two female members. The Assembly is competent to discuss any subject and pass resolutions without restrictions, while the Annual Budget is passed item by item.

By the Aundh State Act passed in 1931 à Darbar has been formed to run on the administration. It is a ministure executive council and consists of the Dewan of Aundh and the High Court Judge. An elected representative of the people is to be a member of the Darbar from 1935. He takes considerable interest in Rural Uplift and has been making siderable interest in Rural Uplift and has been making vigorous efforts in that direction

Shrimant Pantsaheb is a keen student of drawing and painting and has edited Picture Verul, Pictorial Alanta, Pictorial Ramayana and life of Shivaji in three picture volumes He also takes great interest in physical exercise and has written in English a book on the subject called "The Surya Namaskars."

The State possesses an independent High Court Most of the villages have got Village Panchayats.

HIS HIGHNESS NAWBE PART STATE, PART JAMINATKHANJI, the present ruler of Balasinor State, in the Gujarat Agency

Born. 10th Movember 1894

Educated. At the Raj Kumar College, Rajkot After finishing the full course at this College he joined the Imperial Cadet Corps, Dehra Dun He is a ruler of literary taste and can compose poetry in Urdu and Gujarati

Ascember 1915 December 1915

Married First with the daughter of Babi Shri Sher-Jummakhanji Saheb, the heirshe died At Diesen't the

apparent of Junagadh State, but she died At present the Nawab Saheb has three Begum Sahebas. (1) Sardar-Begum Saheba. (3) Zohra-Begum Saheba. The senior Begum Saheba, Sardar-Begum Saheba, the daughter of the Thakor Saheb of Kervada, gave buth to a son in 1920, who unfortunately died in infancy The thurd Zohra-Begum Saheba has given buth to a daughter

The Nawab Saheb comes of a very ancient and well-known Babi dynasty the members of which had enjoyed a very high social position at the time of the Mughal Empire and since that time till to-day the same magnificent position has been fully maintained and the British Covernment also have been always graciously pleased to protect the interests of the Ruing Tamily The Ruiers of this noble clan have been famous not for their kingly pomp, dignity and splendour, but for the luxuriance of benevolence and exuberance of munificence throughout Gujarat and Kathiawar

Educated: At the Princes'
Mayo College, Ajmer.

Mansa is by origin, descent and repute an ancient and ambortant State of the Sabar-kantonahip with the Government of India through the Hon'blethe A G. G. The ruling house of Mansa is lineally descended from the illustrious Vanraj Chavada who in 764 A.D. ruled both Gujarat and Kathiawar with his capital at Satan, and according to a statement of an Arabian traveller ment of an Arabian traveller

quoted in the Ras-Mala, he was

The late lamented Kuler Raoly Shree Takhtasmhy ruled Mansa for 37 years During his beneficent regime the State progressed in a stricty of ways Interested as he was in the development of the plantation of mango trees on a very large scale which added largely to the fertility of the soil and the prosperity of the State. He largely to the fertility of the soil and the prosperity of the State. He winded Europe in 1928 and while in England attended the sittings of

the Butler Committee on Indian States.

The eldest sister of the present Ruler is married to the Raja Saheb of Bansda and the younger to the Yuvaraj Saheb of Lakhtar.

The of his younger brothers are structure law in England.

Ino of his younger brothers are studying law in England.
Average Annual Income: Rs. 1,80,000. Population 17,000

Ropergaon in the Ahmednagar District Sherk Muan II held both iatner Kaghuba, the father of the last Peshwa, was sent as a state prisoner to highest honours that the Chattrapath could bestow upon him. service he received the Parganas of Erondol and Daryapur, and the cause and placed him on the throne of Satara and tol minior this opposed by Tarabai, his aunt Nawab Sheik Miran I espoused Shanu's grandson of Shivajt, returned from Delhi and approached Satara he was and was succeeded by his son Sheik Miran I in 1708 when Shahu the vissions he was rewarded by the grant of a Jagur He died in 1700 Marathas For carrying out successfully several expeditions and political was left at Wai for the protection of the territory conquered from the When the Emperor returned from Bijapur to Satara, Mawab Bijukhan sepe who invaded the Deccan and conquered the kingdom of Bijapur neld a high command in the army of the Emperor -yasınA The founder of the family

Address The Palace, Wat 1929, and was for some time President of the State Council, Jaora State and is permanent President of the Satara District Anjuman Islam He was appointed an Hon A.D.C. to H. E. The Covernor of Bombay in was elected Vice-President of the Bombay Presidency Muslim League, 1920, and member of the Legislative Assembly from 1921 to 1923 additional member of the Bombay Legislative Council for two years till precedence over all the first class Sardars in the Deccan. The present Chief Nawab Gulampilan Bilukhan takes land in the Deccan, all the territory in the Mizan's Dominion being July 1920 and included the pargans of Erondol, and numerous tracts of the possessions of this family were restored under a Treaty dated 3rd In 1820 after the conquest of the Deccan by the British Government

and son in captivity till 1796 when Baji Rao was brought to Poons

by Maharaja Daulat Rao Scindia of Gwaltor'

## The Calendars.

A full Calendar will be found at the beginning of the Fasts year was derived from a combination of this book. Below are given details of the from of the Helira and Samvat years by the Jesus Calendar is in accordance with time to the Helira, but the fact of its being the system arranged A.D. 358. The Calendar is a scenarial and it is in accordance with time to the Helira, but the fact of its being dollar it in a standardar is a scenaria in the Calendar is a scenaria in the Calendar is a scenaria in the Calendar is a scenaria in the Calendar is a scenaria in the Calendar is a scenaria in the Calendar is a scenaria in the Calendar is a scenaria in the Calendar is a scenaria in the Calendar is a scenaria in the Calendar is a scenaria in the case in the cas

Hindu.

Jan.

The Mohammedan, or era of the Hellin, dates from the day after Mahomet's flight of the might of July 15, 622 a.p. The months are Lunar. calendars. The Samoat era dates from 57 B.O., and is Luni-solar. The months are divided into two fortulghts—suds, or bright, and bads, or dark. Each fortulght contains 15 tithls, which furnish the dates of the civil days given in our analysis. of the Christian Era , the year is Luni-solar. The Jenush Calendar is in accordance with the system arranged A.D. 358. The Calendar address from the Greation, which is faced as \$780 years and a months before the beginning \$7,760 years and a months of the Lawrence and a month of the Lawrence and the Christian Res.
